	PAGE
CHAPTER 1—The General Economy	1
<i>The international setting—p. 1</i>	
<i>The growth of the economy—p. 1</i>	
<i>Capital formation—p. 10</i>	
<i>Balance of payments—p. 20</i>	
 CHAPTER 2—Money and Banking	 21
 CHAPTER 3—Trade	 28
<i>Imports—p. 31</i>	
<i>Exports—p. 38</i>	
<i>Trade with African countries—p. 42</i>	
<i>Trade within the E.A. Community—p. 42</i>	
<i>The Export Promotion Council—p. 52</i>	
<i>The Kenya National Trading Corporation—p. 52</i>	
 CHAPTER 4—Agriculture	 54
<i>Marketed agricultural production—p. 54</i>	
<i>Crop areas, livestock numbers and inputs used—p. 59</i>	
<i>Crop production—p. 59</i>	
<i>Livestock production—p. 69</i>	
<i>Agricultural development services—p. 71</i>	
<i>Land adjudication and registration—p. 78</i>	
<i>Land settlement—p. 80</i>	
 CHAPTER 5—Natural Resources	 82
<i>Water supplies—p. 82</i>	
<i>Fisheries—p. 86</i>	
<i>Forestry—p. 87</i>	
<i>Wildlife—p. 89</i>	
<i>Mining and quarrying—p. 90</i>	
 CHAPTER 6—Manufacturing, Electricity, Building and Construction	 94
<i>Manufacturing—p. 94</i>	
<i>Electricity—p. 101</i>	
<i>Building and construction—p. 103</i>	
 CHAPTER 7—Tourism	 108
<i>Visits and visitor days—p. 109</i>	
<i>Hotel occupancy and capacity—p. 114</i>	
<i>Visits to wildlife areas and other attractions—p. 117</i>	
<i>The development of tourism—p. 121</i>	

CHAPTER 8—Transport and Communications	123
<i>Road transport—p. 123</i>	
<i>Railways—p. 126</i>	
<i>Harbours and shipping—p. 127</i>	
<i>Civil aviation—p. 128</i>	
<i>Posts and telecommunications—p. 131</i>	
<i>Broadcasting—p. 131</i>	
CHAPTER 9—Employment, Earnings, Manpower and Consumer Prices	133
<i>Employment—p. 134</i>	
<i>Earnings—p. 139</i>	
<i>Manpower and Kenyanisation—p. 142</i>	
<i>Consumer prices—p. 146</i>	
CHAPTER 10—Public Finance in the Economy	149
<i>Kenya Government—p. 149</i>	
<i>Local Authorities—p. 166</i>	
<i>East African Community—General Fund Services—p. 172</i>	
CHAPTER 11—Education	174
<i>Primary education—p. 175</i>	
<i>Secondary education—p. 177</i>	
<i>Schools—p. 184</i>	
<i>Technical and vocational education—p. 184</i>	
<i>Teachers—p. 185</i>	
<i>University education—p. 187</i>	
<i>Adult education—p. 190</i>	
CHAPTER 12—Health, Housing and other Social Services	191
<i>Health, nutrition and family planning—p. 192</i>	
<i>Housing—p. 196</i>	
<i>Other social services—p. 197</i>	
CHAPTER 13—The Outlook for 1973	200

NOTES:

1. Figures may not add to totals because of rounding.
2. The following conventional signs are used in the tables:
" — " Means nil or negligible (less than half the final digit shown).
" . . " Means figures not available.

LIST OF TABLES

	TABLE NO.	PAGE
The General Economy		
Gross domestic product—1964,1968-1972	1.1	2
Gross domestic product: percentage rates of growth, 1964-1972	1.2	4
Gross domestic product: plan targets and realized growth rates (at 1967 prices)	1.3	6
Gross domestic product: sectoral shares, at constant (1964) prices, 1964, 1968-1972	1.4	7
Contribution of the public sector to gross domestic product 1964, 1968-1972	1.5	9
Total use of resources, 1964, 1968-1972	1.6	10
Gross national product, 1964, 1968-1972	1.7	11
Capital formation by type of asset, 1964, 1968-1972	1.8	12
Capital formation: construction expenditure by Kenya Government, 1964, 1967-1972	1.9	14
Capital formation, public sector, 1964, 1967-72 (at current prices)	1.10	15
Capital formation by industry, 1964, 1968-1972	1.11	16
Capital formation, analysis by industry and type of asset, 1964 and 1972 (at constant 1964 prices)	1.12	17
Balance of payments, 1970-1972	1.13	19
Money and Banking		
Foreign exchange reserves	2.1	22
Money supply, 1966-1973	2.2	23
Commercial banks—advances/deposits and cash ratios	2.3	23
Commercial banks—bills, loans and advances	2.4	24
Assets and liabilities of commercial banks	2.5	25
Assets and liabilities of the Central Bank of Kenya	2.6	26
Commercial banks—liquid assets	2.7	27
Trade		
Balance of trade, 1968-1972	3.1	28
Import price index	3.2	29
Export price index	3.3	30
Terms of trade, 1968-1972	3.4	31
Imports from overseas and East Africa by broad economic category, 1969-1972	3.5	32
Selected net imports, 1967-1972	3.6	34
Imports of transport equipment, 1970-1972	3.7	35
End use analysis of imports, 1966-1972	3.8	36
Origin of overseas (net) imports, 1968-1972	3.9	37
Quantities of principal overseas exports, 1968-1972	3.10	38
Exports to overseas and East Africa by broad economic category, 1968-1972	3.11	39
Overseas export prices, 1968-1972	3.12	40
Overseas exports, 1971 and 1972, changes in value, quantity and price	3.13	40
Direction of overseas exports, 1968-1972	3.14	41

LIST OF TABLES—(Contd.)

	TABLE NO.	PAGE
Trade with African countries, 1968-1972	3.15	43
Trade with East Africa, 1960, 1968-1972	3.16	44
Imports from Tanzania, 1968-1972	3.17	45
Exports to Tanzania, 1968-1972	3.18	46
Imports from Uganda, 1968-1972	3.19	47
Exports to Uganda, 1968-1972	3.20	48
Kenya exports to Tanzania subject to transfer tax, 1968-1972	3.21	49
Kenya exports to Uganda subject to transfer tax, 1968-1972	3.22	51
Kenya National Trading Corporation—turnover ex-depot, 1966/67-1971/72	3.23	53
Agriculture		
Gross marketed production by commodity, 1967-1972	4.1	55
Average gross commodity prices to farmers, 1967-1972	4.2	56
Shares of commodity groups in gross marketed production, 1966-1972	4.3	56
Gross marketed production from large and small farms, 1965-1972	4.4	56
Crop areas on small farms and settlement schemes, 1970	4.5	57
Estimates of livestock numbers by province (excluding large farms), 1970	4.6	58
Large farms—areas of major crops, 1968-1972	4.7	58
Large farms—livestock numbers, 1967-1972	4.8	58
Agricultural inputs, 1965-1972	4.9	60
Area of cane harvested and cane production, 1971 and 1972	4.10	63
Exports of fresh horticultural produce, 1968-1972	4.11	65
Coffee production, 1966-72	4.12	66
Coffee quality, 1969/70-1971/72	4.13	66
The development of small-holder tea—to 1971/72	4.14	67
Dairy production, 1969-1972	4.15	69
Production and disposal of beef by the Kenya Meat Commission, 1966-1972	4.16	70
Deliveries of sheep, lambs and goats to the Kenya Meat Commission, 1966-72	4.17	71
Pig deliveries, 1966-72	4.18	71
Total enrolments at agricultural training institutions, 1970-1972	4.19	72
Area worked by the Tractor Hire Service, 1967/68-1971/72	4.20	74
Progress of irrigation and production at the major irrigation schemes, 1967/68-1971/72	4.21	75
New agricultural credit issued by type of farmer, 1969/70 to 1971/72	4.22	77
Number of registered co-operative societies, 1972	4.23	78
Programme of land registration and adjudication as at 31st December, 1972	4.24	79
Number and area of holdings added to the land register during 1970-1972	4.25	80
The progress of land settlement to 1972	4.26	81
Sales from settlement schemes through co-operatives, 1965-1972	4.27	81

LIST OF TABLES—(Contd.)

	TABLE NO.	PAGE
Natural Resources		
Central Government and other public authority development expenditure on water supplies and related services, 1968/69-1972/73	5.1	82
Development expenditures for water supplies and related services by the Water Department, 1968/69-1972/73	5.2	83
Rural water supply project schemes operational or expected to be operational by June, 1973	5.3	83
WHO/UNICEF assisted rural water supply programme in Kenya, 1964/65-1972/73	5.4	84
Value of community self-help water supply and improvement schemes, 1969-1972	5.5	85
Capital expenditure on water supply undertakings by local authorities, 1968-1973	5.6	85
Boreholes drilled and subsidy paid, 1967/68-1971/72	5.7	86
Quantity and value of fish landed, 1970-1972	5.8	87
Forest plantation area, 1966-1972	5.9	88
Sales of forest products, 1966-1972	5.10	88
Game Department revenue, 1970-1972	5.11	90
The quantity of mineral output, 1968-1972	5.12	91
The value of mineral output, 1968-1972	5.13	91
Quantity and value of minerals produced for cement manufacture, 1971 and 1972	5.14	92
Quantity and value of soda ash exports by destination, 1969-1972	5.15	93
Manufacturing, Electricity, Building and Construction		
Quantity index of manufacturing production, 1965-1972	6.1	95
Production of beverages and tobacco, 1966-1972	6.2	98
Production of paints and distempers, 1968-1972	6.3	99
Exports of petroleum products, 1967-1972	6.4	100
Cement production and utilization, 1965-1972	6.5	101
Sales of electricity by type of user, 1968-1972	6.6	101
Generation, imports and consumption of electricity, 1968-1972	6.7	102
The value of all private building work completed in main towns, 1967-1972	6.8	103
Reported completion of new private buildings in main towns, 1967-1972	6.9	103
Private and public building plans approved by the Nairobi City Council, 1967-1972	6.10	104
Cost of building materials and labour, 1966, 1970-1973	6.11	105
M.O.W. expenditure on road maintenance and repair, 1972/73	6.12	106
M.O.W. — roads completed, 1972	6.13	106
M.O.W. — road projects started in 1972	6.14	107
M.O.W. — roads nearing completion, 1972	6.15	107
Tourism		
Bed occupancy planned and achieved, 1970 and 1972	7.1	108
Recorded visits by purpose of visit, 1970-1972	7.2	109
Growth pattern of tourist hotel bed-nights, visits and visitor days, 1969/70-1971/72	7.3	109

LIST OF TABLES—(Contd.)

	TABLE NO.	PAGE
Visitor departures by country of nationality and country of residence, 1968-1972	7.4	110
Visitor departures by method of travel, 1968-1972	7.5	111
Total stay of departing visitors and average length of visit, 1968-1972	7.6	112
Total stay of departing visitors by residence and purpose of visit, 1971-72	7.7	113
Hotel bed occupancy, 1965, 1969-1972	7.8	114
Hotel beds available and occupied, 1965-72	7.9	115
Hotel rooms and beds available and occupied, 1965, 1968-1972	7.10	116
Growth pattern of hotel occupancy, 1965-1972	7.11	117
Game lodge occupancy, 1965, 1971-72	7.12	118
Total number of visits to national parks, 1971-72	7.13	119
Visits to national parks, 1967/68-1971/72	7.14	120
Visitors to museums, snake park and sites, 1969-1972	7.15	120
Transport and Communications		
Transport and communications—value of receipts, 1967-1972	8.1	124
Consumption of petroleum products used in transport, 1968-1972	8.2	125
Passenger and freight receipts, 1967-1972	8.3	125
New motor vehicle registrations, 1967-1972	8.4	125
Licences issued for vehicles on hire, 1967-1972	8.5	126
Freight handled at Mombasa harbour, 1968-1972	8.6	128
Commercial traffic at Nairobi airport, 1968-1972	8.7	129
Commercial traffic at Mombasa airport, 1968-1972	8.8	129
Air traffic at Wilson airport, 1968-1972	8.9	129
Postal and telecommunication services, 1968-1972	8.10	131
New radios and T.V. sets sold and licensed, 1971-1972	8.11	132
Employment, Earnings and Consumer Prices		
Total wage employment in the economy, 1970 and 1971	9.1	133
Employment by major sector, 1969-1972	9.2	135
Employment in the private sector by industry, 1969-1972	9.3	135
Employment in the public sector, 1969-1972	9.4	136
Public and private employment by industry, 1971 and 1972	9.5	137
Employment by race and sex, 1969-1972	9.6	137
Employment by citizenship, 1971 and 1972	9.7	137
Asian and European employees by citizenship and industry, 1971 and 1972	9.8	138
Earnings by major sector, 1969-1972	9.9	140
Earnings in the private sector, 1969-1972	9.10	140
Earnings in the public sector, 1969-1972	9.11	140
Changes in employment and earnings, 1969-1972	9.12	141
Average earnings per employee, 1969-1972	9.13	142
Kenyanisation of high and middle level occupations, 1972	9.14	143
Trade test passes, 1970-1972	9.15	145
Percentage changes in consumer prices, December 1967 to April 1973	9.16	146
Middle income index of consumer prices—Nairobi	9.17	147
Lower income index of consumer prices—Nairobi	9.18	148

University of Nairobi—Kenya students by Faculty 1967/68-1972/73	11.18	188
Universities in East Africa—first degree students by Faculty, 1970/71—1972/73	11.19	189
 Health, Housing and Social Services		
Central Government expenditure on social services, 1968/69-1972/73	12.1	191
Local government expenditure on social services, 1968-1972	12.2	191
National Hospital Insurance Fund, 1968/69-1971/72	12.3	192
Hospital beds and cots by province, 1971 and 1972	12.4	193
Registered medical personnel, 1969-1972	12.5	193
Reported cases of some infectious diseases, 1969-1972	12.6	194
Attendance at family planning clinics, 1967-1972	12.7	195
Attendance at family planning clinics by province, 1971-1972	12.8	195
National Housing Corporation projects by province, 1969-1972	12.9	197
Value of self-help schemes, 1970-1972	12.10	198
National Social Security Fund contributions and benefits, 1966-1972	12.11	199

ECONOMIC SURVEY, 1973

CHAPTER 1—THE GENERAL ECONOMY

The International Setting

The more notable, and not altogether unrelated, features of the international economic situation in 1972 and the early months of 1973 were the faster rate of growth in the western industrial countries, continued inflation in their economies, a considerable rise in commodity prices and the persistence of unsettled monetary conditions. In terms of growth, 1972 was a buoyant year, with total output in the industrial countries increasing by between 5 and 6 per cent, which was the steepest rise since 1966. Although the prices of industrial commodities continued to rise, those of primary commodities also showed a significant increase. Renewed economic growth and rising prices together led to a growth in world trade of about 9 per cent in volume and 7 to 8 per cent in money terms, to give a value increase of about 17 per cent.

1.2. World economic conditions were therefore favourable from the point of view of developing countries such as Kenya. However, the international monetary system continued to display unsettled conditions, which also had important repercussions, direct and indirect, on the currencies of developing countries. Details of their impact on Kenya are discussed in Chapter 2.

The Growth of the Economy

1.3. Within Kenya, 1972 was a very satisfactory year in terms of gross domestic product (GDP). As shown in Table 1.2, GDP grew by 12.3 per cent at current prices and 6.9 per cent at constant (1964) prices. This growth was rather faster than the expected increase forecast in last year's *Economic Survey*, and was primarily due to the fact that the agriculture sector showed vigorous recovery from the effects of the drought in 1971. Tables 1.1 and 1.2 also contain revised estimates of growth for 1971. These suggest that 1971 was a slightly better year than the preliminary estimates published in last year's *Survey* implied, mainly because the product of "general government" was, in fact, a good deal higher than originally estimated. In absolute terms, gross domestic product in 1972 was K£647 million at current prices and K£554 million at constant 1964 prices, compared with K£576 million and K£518 million in the previous year.

1.4. Table 1.2 also shows the cumulative rate of growth in the economy at 1964 prices, during the nine years since independence. Over this period, the economy has been growing at 6.8 per cent per annum, a rate of growth higher than the average projected in the Development Plans drawn up and implemented since the end of 1963. An attempt is made in Table 1.3 to measure GDP at 1967 prices, in order to assess progress under the current Development Plan, projections for which were made at 1967 prices. The rate projected in the Plan is 6.7 per cent, whereas actual growth last year was fractionally less, 6.6 per cent, compared with 7.3 per cent in 1971. However, performance since the inception of the current Plan period has been slightly better than the projected target.

GROSS DOMESTIC PRODUCT—1964, 1968-1972

1.5. As already mentioned, the agriculture sector showed a strong recovery, with a rate of growth in real terms of 16.7 per cent. Details of developments affecting individual commodities are set out in Chapter 4. In manufacturing, however, the real growth rate, although not in itself unsatisfactory, fell substantially—to 7.3 per cent, compared with 13 per cent in 1971. The factors which contributed to this slowing down are elaborated in Chapter 6. Among the other major sectors, building and construction also grew rather more slowly, although at the acceptable rate of 7.6 per cent. However, the position was a good deal less satisfactory in two other large sectors, trade and transport and communications. Growth was negative in both, compared

with substantial increases in 1971. In trade, the major factor responsible for the sluggishness of the sector was the decline in external trade, discussed in Chapter 3. This factor was also partly responsible for the slow growth in transport and communications. In the smaller sectors, such as forestry, mining, fishing and ownership of dwellings, the position was somewhat mixed. However, in "other services", which consist of a wide range of activities (including tourism and comprising a substantial proportion of total economic activity), growth was rapid. But a comparison of 1971 and 1972 does underline the fact that in the monetary economy, for enterprises and non-profit institutions as a whole, the satisfactory overall rate of growth was determined primarily by developments in the agricultural sector. Real growth in the remaining major component of the monetary economy, "general government", was more than 2 percentage points lower than in 1971, according to the preliminary estimates shown in the tables.

1.6. The relative share of each sector in total GDP at 1964 prices is shown in Table 1.4. As in past years, the significance of the non-monetary sector continues to decline and that of "general government" to grow gradually. Within "enterprises and non-monetary institutions" the share of agriculture in 1972 increased by more than one percentage point. The significance of "other services" also grew somewhat, as it has done for several years past.

1.7. The contribution of the public sector to GDP, shown in Table 1.5, remained in 1972 at just under 31 per cent, as in 1971. Although "general government" grew a little faster in 1972, the increase in public sector enterprise activity was considerably slower than in 1971. The most rapid growth since 1964 has been in the enterprise activities of the Government's parastatal bodies, although, in absolute terms, the enterprise organizations of the East African Community (notably its transport corporations) still account for nearly half of public GDP in the enterprise sector. However, their share has been falling for several years, whereas that of the Government's parastatal bodies has risen from 11 per cent to 35 per cent since 1964.

1.8. Total resources available (shown in Table 1.6, together with their allocation between investment and consumption), increased at current prices by over K£47 million in 1972. Of the total, K£169 million went into investment, which includes fixed capital formation and stocks. In fact, the resources going into gross fixed capital formation went up by nearly K£16 million (a rise of 1 percentage point over 1971, to 22 per cent of the total), but there was a drop of K£9 million in stock-building, related primarily to the fall in imports during the year (*see* Chapter 3). At current prices the allocation to gross investment was 23 per cent of all resources available, compared with 24 per cent in 1971. The bulk of the increase in available resources therefore went into consumption. Public consumption rose by K£14 million and private by K£27 million, increases of 12 and 7 per cent over their levels in 1971. The overall share of private consumption in the total remained unchanged in 1972.

1.9. Table 1.7 shows "gross national product", which differs from "gross domestic product" at factor cost, since it takes into account indirect taxes and subsidies and factor payments to and from other countries. The relative significance of the different factors in GDP is also set out in the table. There was little change in the shares of remuneration of employees, rents and operating surplus in 1972.

Capital Formation

1.10. The level of gross capital formation at current and constant prices, by type of asset, is shown in Table 1.8. At current prices, this rose by nearly 11 per cent in 1972, but at constant 1964 prices the growth was only 3 per cent. These rates compare with 28 and 19 per cent respectively in 1971. The major factor in the decline last year was the substantial fall in the rate of capital formation in transport equipment, which, at both current and constant prices, decreased by about K£5 million. Investment in the private sector was reduced partly by restrictions on the imports of vehicles and partly by what appears to have been a real reduction in the demand for passenger service vehicle licences (*see* Chapter 8). In the public sector, investment in transport equipment is strongly influenced by the East African Community's rail and air activities, and purchases of aircraft and aircraft parts declined substantially. While the fall in the overall rate of growth of capital formation affected both public and private activity, it was more pronounced in the former, having fallen from 62 per cent in 1971 to only 11 per cent last year.

1.11. A breakdown of capital formation by major categories of public organization is shown in Table 1.9. This indicates that, while capital formation in the East African Community had almost doubled in 1971, in 1972 it fell back almost to the 1970 level. The rate of increase in investment by other public organizations also declined. In the case of the Government it decreased from 31 per cent in 1971 to 17 per cent in 1972—the slower rate of growth in construction expenditure is apparent from Table 1.10. There was only a modest growth in public investment in machinery and equipment.

1.12. Capital formation by industry is shown in Table 1.11, and by industry and type of asset in Table 1.12. At current prices, investment in monetary enterprises and non-profit institutions rose by 11 per cent, compared with 30 per cent in 1971. However, there were wide variations in investment in individual sectors. Transport, storage and communications fell substantially, as already indicated, but significant growth took place in agriculture and manufacturing.

BALANCING ITEM									

*Revised

+Provisional.

Balance of Payments

1.13. Revised estimates of the balance of payments for 1970 and 1971 and provisional figures for 1972 are set out in Table 1.13. The final position in 1971 was rather better than suggested by the estimates published in last year's *Survey*—the overall deficit was just under K£26 million, rather than nearly K£32 million. This was a turn-round of K£39 million from the surplus in 1970, and was caused mainly by a sharp increase in imports.

1.14. In 1972, however, the position was reversed and there was an overall surplus of K£7.4 million, primarily due to a sharp reduction in the deficit on current account, which fell from K£54 million to K£25 million. This was largely the result of a decline of nearly K£26 million in the adverse balance for merchandise transactions, but there was a slight improvement in invisible earnings. There was also some growth in capital receipts from abroad. For 1972, these were estimated at K£32.4 million, compared with K£28.6 million in 1971. This growth was entirely in receipts by the Government.

1.15. The overall improvement in the basic balance resulted in an increase in monetary reserves, which went up by K£9.9 million, whereas in 1971 they had declined by over K£21 million. (Details of foreign exchange reserves and movements in trade are presented in Chapters 2 and 3).

CHAPTER 2—MONEY AND BANKING

The "Smithsonian" agreement of December, 1971, which followed the upheaval in the international monetary situation earlier in the year, unfortunately failed to produce any lasting stability. Under the Smithsonian arrangements, a major realignment of the currencies of the industrial countries took place. This included, *inter alia*, the revaluation of the yen and deutschemark, by 17 and 13 1/2 per cent respectively, against the US dollar. In terms of other currencies, this meant that the dollar had been effectively devalued by 7 1/2 per cent, while the yen and the deutschemark were revalued by 13 and 6 3/4 per cent respectively. However, these arrangements did not bring about a conspicuous improvement in the US balance of payments, which showed a greatly increased deficit on current account in 1972. Pressure against the dollar began to build up again and, early in 1973, there was a massive inflow of dollars into West Germany and Switzerland. This led to a second devaluation of the dollar, by 10 per cent, as well as a general "float" of all the other major currencies. Sterling had already been floating since June, 1972.

2.2. The monetary crises of the last few years have made it abundantly clear that fundamental reform of the international monetary system is unavoidable. The problem has two related aspects—a mechanism for speedy and adequate exchange rate adjustments by deficit and surplus countries and the nature and rate of growth of international liquidity. This latter is primarily a question of determining the future of Special Drawing Rights—the initial three-year period for their issue expired at the end of last year. Progress in the discussions on reform is slow. However, a notable development in July, 1972 was the setting up by the International Monetary Fund of the "Committee of Twenty". This replaces the "Committee of Ten", composed solely of industrial countries, which had, for many years, determined international monetary arrangements with little reference to the problems of developing countries.

2.3. These international monetary events have inevitably had repercussions in Kenya. Following the upheavals of 1971, the three East African Governments agreed to peg their currencies to the dollar. Devaluation of the US dollar therefore also meant devaluation of the Kenya shilling. However, in March of this year, soon after the second devaluation of the dollar, the Central Bank altered the previous parity with the dollar from Sh. 7.14 to Sh. 7. Taking into account the structure of Kenya's trade, the effective devaluation of the Kenya shilling was per cent in relation to other (non-dollar) currencies. The overall devaluation of the shilling since late 1971 has been more than 13 per cent.

2.4. In last year's *Survey* mention was made of the sharp drop in foreign exchange reserves during 1971, and of the measures taken by the Government to correct the situation—these included credit and import restrictions. The trade figures for 1972, discussed in the next chapter, indicate that these

measures achieved their objectives—imports declined by 4.5 per cent. Exports rose by 14.2 per cent, primarily owing to increased agricultural production, which was stimulated by favourable weather conditions. The devaluation of the Kenya shilling in 1971 might also have made a marginal contribution to the increase in exports. At the same time earnings from tourism also rose, as shown in Chapter 7. As a consequence, as shown in Table 2.1, foreign exchange reserves, which had fallen to K£62.7 million in December, 1971, began to rise and, by the end of 1972, had reached K£72.6 million. They have continued to rise into the current year and, at the end of March, 1973, stood at K£85 million.

2.5. The Central Bank also took steps to prevent illicit transfers of funds abroad through over-invoicing of imports by appointing an international firm to check on the validity of remittances for imports. More recently, the Bank initiated a scheme to register all exporters, with a view to ensuring that earnings from exports are not retained abroad in a manner contrary to exchange control regulations.

2.6. The growth of over 22 per cent in reserves also indirectly affected the money supply, which rose by 19 per cent during the 15 months prior to April, 1973. In value terms, the money supply increased by just under K£34 million during this period. This is indicated in Table 2.2.

2.7. As shown in Table 2.3, bank deposits also rose by 19 per cent during the 15 months after December, 1971. However, advances went up by less than 3 per cent during the same period. Details of advances made are shown in Table 2.4. Borrowings by the commercial sector during these 15 months fell by nearly K£4.5 million. The commercial sector is the largest outlet for bank finance in the form of bills discounted and loans and advances made. Loans and advances to the agricultural sector showed no growth, while those to the manufacturing sector went up by only 15 per cent. However, there was a substantial rise in loans and advances to the building and construction industry and private households, which rose by 21 and 17 per cent respectively. The decline in loans and advances to the commercial sector reflected the consequences of measures by the Central Bank to restrict credit, and the impact of import licensing. The Central Bank attempted to restrict the growth rate in total loans, advances and bills discounted to 12 per cent between February, 1972 and February, 1973. In fact, such advances only rose by 6 per cent, and the advances/deposits ratio declined from 75 per cent at the end of 1971 to 65 per cent in March, 1973. It would seem that the effect of import licensing was much greater than that of the credit curbs, and this was a major factor in the lack of demand for finance from the commercial sector.

2.8. Given the relative lack of growth in bills discounted, loans and advances, the bulk of the increase in money supply was either absorbed by the Government or went into the deposits of commercial banks with the Central Bank. This is apparent from Tables 2.5 and 2.6, which show the assets and liabilities of the Central Bank and the commercial banks. Since the end of 1971, commercial bank holdings of Treasury bills have increased from K£3.8 million to K£15.2 million. Domestic investments by the commercial banks went up from K£10.9 million to K£24.2 million during the same period. Over 90 per cent of these are accounted for by deposits with the Cereals and Sugar Finance Corporation.

*Include Notes and Coins, balances at Central Bank, net inter-bank balances in Kenya and overseas (included only if positive) and Treasury Bills. Defined in Central Bank Circular letter to Banks—effective 1st October, 1972.

**As provided for in Banking Act 1968. Till September, 1972 the ratio was fixed at 12.5%. On 1st October, 1972 the prescribed minimum was re-adjusted to 15%—see Economic and Financial Review—Central Bank of Kenya—July-September, 1972—Vol. V No. 1.

+Deposits and Liquid Assets are calculated as an average of three balance days.

2.10. With the objective of strengthening the foreign exchange reserves achieved, it has been possible to relax the restrictions on imports and credit. Measures to speed up the processing of applications for import licences have been implemented, and the licensing criteria have been liberalized. The Central Bank has asked the commercial banks to expand their credit facilities, by lifting restrictions on hire purchase for capital equipment and commercial vehicles, and to be more liberal in the provision of credit to new African firms entering the import trade.

CHAPTER 3—TRADE AND COMMERCE

The value of world trade is estimated to have risen by about 17 per cent in 1972 compared with its value in 1971. Of this growth, 7-8 per cent was accounted for by rising prices and 9 per cent by an increase in the volume traded. This price rise was somewhat slower than in 1971 and was partly caused by the rapid change in the supply—demand situation for primary products such as agricultural commodities, food and metals, although prices of manufactured goods also went up, notably in Western Europe.

3.2. These trends in world prices and the extension of domestic import licensing controls had considerable effects on Kenya's external balance of trade (Table 3.1). There was a growth of nearly 22 per cent (K£17.1 million) in the value of overseas exports and re-exports whilst such imports fell by 3.5 per cent (K£6.5 million), much of this decrease being in imports by "government"*. These movements led to an improvement in the overseas balance of K£23.6 million, reducing the deficit from its exceptionally high level of 1971 to K£82.2 million.

BALANCE OF TRADE, 1968-1972

*Described in the Annual Trade Report as "Net Imports".

+Described in the Annual Trade Report as "Domestic Exports".

* Taken here to include the Kenya Government and the E.A. Community and its Corporations.

3.3. The total value of overseas trade rose by 4 per cent (K£10.5 million) but East African trade fell by 7 per cent (K£3.6 million). Trade with Uganda fell by K£3.1 million, with exports being most affected, resulting in a decline of K£2.2 million in the trade surplus. However, this was compensated for by a rise of K£1.5 million in exports to Tanzania whilst imports fell by K£2.0 million, back to their 1970 value. The overall effect was therefore an improvement in the East African balance of trade of K£1.4 million and the total deficit on visible trade was thus reduced to K£62.9 million, compared with nearly K£88 million in 1971.

Total East African Imports	109	109	111	113	133
All Imports	104	105	107	117	126

3.4. Overall, the import price index rose by 8 per cent to 126 (1964 = 100), overseas imports rising by 7 per cent whilst those from the partner states went up by 18 per cent. It is interesting to note that many of the price rises were for goods whose total import value had fallen (e.g. the rise in the overseas index of semi-manufactures was partly due to a 37 per cent rise in the price of rubber tyres and tubes, but the value of such imports was less

than 20 per cent of the 1971 level). Of all major overseas imports, only sugar and wheat showed sizeable increases in both the quantity imported and the price per unit. The world price for crude petroleum rose during 1972, which meant that the value of these imports increased while their quantity remained constant. The rapid inflation in main supplying countries can be seen from the overseas index (Table 3.2), which has risen by 17 per cent since 1970.

3.5. The jump of nearly 18 per cent in 1972 in the price of goods imported from within East Africa was unusually large—it was concentrated in four groups: food and live animals (especially sugar, meat, margarine), crude materials (oil seeds from Uganda), animal and vegetable oils, and textiles (cotton piece goods, blankets, synthetic fibres). Due to a fall in the price of Uganda tobacco, the index for beverages and tobacco fell.

All Exports Excluding Gold	100	99	107	109	118

3.6. The export price index rose by 8 per cent. Overseas export prices for major items are shown in Table 3.13. The most important changes were the increase in world coffee prices (13 per cent), hides and skins (12 per cent), sisal (22 per cent) and soda ash (8 per cent). Prices of exports to Uganda and Tanzania rose by nearly 12 per cent in 1972, giving an increase of over 25 per cent since 1970. Only two groups of items showed a sizeable decrease in their index, and in both cases this followed large rises in 1971. These were crude materials (where wood prices have fallen) and animal and vegetable oils (vegetable oils rose in price by 50 per cent in 1971 and fell by 18 per cent in 1972). Increases in the unit price for soap and insecticides caused the 30 per cent rise in the chemical group index, whilst increases for artificial yarn and sisal and jute sacking led to the rapid rise in textile prices. By far the most important influence in metals was the rise in price of various types of container, and increases for certain types of clothing lifted the consumer goods index.

3.7. Given the slightly more rapid overall increase of export prices compared with import prices, there was a marginal improvement in the terms of trade (*see* Table 3.4). However, the 1972 level is still well below that recorded in 1970. (It should be noted that both the external and East African terms of trade have worsened although the overall terms have improved—this happened because East African exports are relatively more important than such imports and the rise of 12 per cent in their prices had a correspondingly larger effect on the overall export index than the more rapid rise in the price of imports from East Africa).

Imports

3.8. The fall in imports forecast in last year's *Survey* was rather less than expected—a decrease of 4.5 per cent (nearly K£9 million) when compared with the 1971 level. Table 3.5 shows the value of imports from overseas and from East Africa in broad economic categories. The relative importance of these categories shows no substantial change although fuels and "other capital goods" have grown in importance at the expense of semi-manufactures and transport equipment. Total imports from overseas fell by 3.5 per cent (K£6.5 million) and from the partner states by 15.6 per cent (K£2.5 million).

*From 1971 onwards, commercial imports by parcel post have been analysed by commodity.

3.9. Overseas imports of food, drink and tobacco rose by 11 per cent with the value of sugar imports going up by K£3.3 million and those of wheat by K£1.3 million, but maize and rice imports fell by K£1.6 million. The increased imports of sugar and wheat were made necessary by the shortfall in domestic production (*see* Chapter 4). The decline in food imports from East Africa is largely accounted for by fruit and vegetables and margarine and shortenings. Nearly all of the decline in imports of basic materials was caused by a drop in the value of oil seeds and vegetable oils coming from East Africa. Approximately half of the rise of K£3.6 million in imports of fuel was due to an increase in crude petroleum but all petroleum products rose in value.

3.10. A wide range of textile goods was affected by the additional import restrictions imposed in 1972 and this resulted in a fall of K£2.1 million (14 per cent). The influence of these restrictions is also seen in semi-manufactures where the fall of K£3.4 million (21 per cent) is largely explained by the exceptionally large decrease in rubber tyres and tubes imported, the combination of domestic production and restrictions saving K£2.3 million compared with 1971, and by a fall in paper and paper manufactures.

3.11. Mainly owing to the development of domestic manufacturing capacity, metals showed a fall of nearly K£1.6 million, with overseas imports of bars and universal plates declining by K£2.4 million whilst those of tubes rose by K£0.9 million. However, the most significant change has been in the category of transport equipment, a more detailed breakdown of which is given in Table 3.7. With aircraft engines included, there was a fall in value of 24 per cent, K£7.4 million. This decline was spread over both the public and private sectors of the economy but "government" imports of aircraft and aircraft parts and engines fell by over K£4.0 million, whilst imports of railway rolling stock and commercial vehicles rose by nearly K£1.5 million. In the private sector, imports of motor cars and parts dropped by K£1.0 million but the major factor was the decline in purchases of commercial vehicles, which fell by K£3.2 million.

3.12. The increase in "other capital goods" was concentrated in non-electrical machinery, notably for paper mills, sugar refining and construction, all of which are industries where large investment projects are taking place. Consumer goods were affected by the import restrictions and purchases of footwear and clothing fell by K£1 million.

3.13. An indication of the end uses of imports is given in Table 3.8. Although 1972 figures are still provisional they suggest that most of the decline in imports was in intermediate goods purchased by enterprises, although there was also a fall in government imports. The decline in imports of intermediate goods was related to a slowing down in manufacturing activity (*see* paragraph 6.2).

*In order to produce a comparable series the countries comprising the Sterling Area have been left unchanged up to 1972.

**From 1971 onwards, commercial imports by parcel post have been analysed by country of origin.

3.14. The country of origin of overseas imports is shown in Table 3.9. The gradual decline in the importance of sterling area imports, which was interrupted in 1971, was resumed with purchases from the United Kingdom and Pakistan being most affected, although the United Kingdom is still by far the largest supplier of imports. The fall in imports of machinery and transport equipment led to a decline in the relative importance of the U.S.A., but Western Europe (excluding Britain) increased its sales to Kenya. The increasing value of petroleum imports is reflected in the figures for Iran, which is now a larger supplier of total imports than the United States.

Exports

3.15. The value of overseas exports was K£17.4 million above the 1971 level but East African exports fell by K£1.1 million and re-exports by K£0.3 million. Nearly all of the increase was concentrated in two categories (shown in Table 3.11)—food, drink and tobacco and basic materials, with only minor changes taking place in the other groups. Further details of the agricultural products which contributed to the growth in exports are set out in Chapter 4.

QUANTITIES OF PRINCIPAL OVERSEAS EXPORTS, 1968-1972

Table 3.10

Item	Unit	1968	1969	1970	1971	1972

Cashew nuts	"	8,607	9,141	23,174	10,604	15,540

*Consisting of small shipments of "special purpose" maize sold at about three times the price for ordinary maize. For this reason, no price is shown in Table 3.12.

3.16. Overseas sales of food rose by 32 per cent (K£13.0 million), this growth being largely accounted for by coffee and tea. The value of coffee went up by 27 per cent, a rise caused equally by increases in the price and the quantity of sales, whilst the 38 per cent rise in tea exports was entirely the

*Excluding gold and currency but including re-exports.

**In order to produce a comparable series the countries comprising the Sterling Area have been left unchanged up to 1972.

3.17. The export value of the basic materials group rose by 27 per cent (K£3.1 million), with the largest single increase coming from hides and skins, for which both price and quantity rose. Pyrethrum extract continued to be the most important item in this category and recorded a 38 per cent rise in quantity. There were smaller increases in both wattle extract and cement, but a fall in the volume of soda ash sold was only just offset by a rise in price.

3.18. East African exports rose in the groups food, drink and tobacco and fuels but fell in most other categories, notably consumer goods. A more detailed breakdown of exports to Uganda and Tanzania is given in Tables 3.18 and 3.20.

3.19. The direction of overseas exports is shown in Table 3.14. The major change has been the rise in the relative importance of Western Europe with the share going to the United Kingdom, the EEC and the other EFTA countries rising from 41 per cent in 1971 to 48 per cent in 1972. There has been a corresponding decrease in the importance of sterling area countries (except Britain), Russia and Eastern Europe, the U.S.A. and Japan.

Trade with African Countries

3.20. Despite the overall growth in the value of exports, those to African countries declined slightly during 1972, resulting in a drop of over 5 percentage points in their share of total exports, to 37 per cent (*see* Table 3.15). The main cause of this was the drop of K£2.6 million in sales to Uganda, although sales to Zambia also fell, by over K£0.5 million, mostly in paper products, glassware and footwear. These adverse effects were partially offset by the rise of K£1.5 million in exports to Tanzania, whilst sales to all other African countries rose by K£1.3 million, mostly accounted for by increases to Somalia (tea, lubricating oil, glassware) and Rwanda (petroleum products).

3.21. Imports from all African countries fell by 13 per cent, K£2.5 million, and their share of total imports therefore fell to 8 per cent. This fall was almost entirely the result of a decline in imports from the partner states, particularly Tanzania, whose sales to Kenya fell by K£2.0 million. Apart from a decline of K£350,000 in imports from Rwanda (mainly of tea) and of K£30,000 from Mozambique (mainly of tea and coal), there were no major changes in the level of imports from individual countries.

Trade within the East African Community

3.22. The total volume of trade with the partner states fell from the record level of K£49.9 million in 1971 to K£46.3 million in 1972, a decrease of 7 per cent. However, a drop in the level of imports was the main factor, since exports fell by only K£1.1 million (3 per cent) whilst imports fell by K£2.5 million (16 per cent), thus improving the visible balance of trade by K£1.4 million. A detailed breakdown of trade with Tanzania and Uganda is shown in Tables 3.17 to 3.20.

3.23. Imports from Tanzania fell back from their exceptionally high level in 1971 to K£5.9 million, approximately the same value as in 1970. As can be seen in Table 3.19 there has been a change in the structure of these imports over these three years. By far the largest rise in 1971 was in manufactured goods (notably cotton piece goods) but most of the fall in 1972 was in food (fruit and vegetables) and in basic materials (vegetable oils), so that the relative importance of manufactures has increased considerably since 1970. Exports to Tanzania went up by K£1.5 million. Sales of dairy products, maize and vegetables rose substantially (K£1.5 million), as did lubricating oils and other basic materials (K£0.5 million) but there was a large fall in sales of cement, which accounted for the decrease in value of manufactured exports.

3.24. Imports from Uganda fell by K£2.0 million in 1971, with this decrease spread over all groups except basic materials. There was a further fall in 1972 of K£0.4 million which brought the value of imports to its lowest level since 1966. Sales of fruit, vegetables, margarine, oil seeds and vegetable oils accounted for a drop of K£0.7 million but an increase in tobacco and some manufactured goods partially offset this movement. In total, exports to Uganda dropped by K£2.6 million. In the food sector, sales of wheat rose by nearly K£1.1 million and of fresh dairy products by K£0.4 million but, since most other items fell, the overall effect was only a small increase. However, the manufactures group showed a decrease of over K£2.7 million, which was spread over the whole range of such goods, with furniture, clothing, perfumery and soaps being the items most affected. Only cement showed a sizeable increase (K£210,000). Exports were adversely affected by the disturbance Within the distribution sector in Uganda, caused by the transfer of businesses in the second half of 1972.

*Tax revoked 3-5-1968, reimposed 10-2-1970.

3.25. *Trade in Transfer Taxed Goods.*—In all, 53 items of exports to Tanzania and 32 items to Uganda are subject to transfer tax. (Not all of these appear in Tables 3.21 and 3.22 as they are not separately identifiable from the trade statistics). However, most of the total trade in such products is accounted for by a few items—paper, cement and soap made up 65 per cent of transfer taxed trade to Uganda in 1972.

3.26. The value of this trade with Tanzania has remained remarkably stable over the five-year period shown in Table 3.21. Due to different dates of imposition of these taxes and to the difficulty of separating out all taxed items it is unwise to place complete reliance on these figures, but they do suggest that sales of these products have grown less rapidly than those of untaxed goods. To some extent, of course, this is the result of competing industries being developed within the partner states, and this effect would probably have occurred even without transfer taxes. The value of taxed trade reached a peak in 1970 and since then exports of vegetable fat, soap products and paper bags have declined by K£650,000, whilst no items have shown a correspondingly rapid increase.

*Tax revoked 5-11-1972.

3.27. The total value of this trade with Uganda shows a much greater degree of fluctuation. It rose by over K£1 million in 1970 following the imposition of the tax on wood and soap in November, 1969 and fell by K£1 million in 1972. This was largely due to the general decline in the value of exports to Uganda, with clothing, footwear, wood, soap and beds being the items most affected, although trade in cement rose.

The Export Promotion Council

3.28. As in previous years, the main activity of the Export Promotion Council (EPC) has been the organization of exhibits at trade fairs all round the world. A Trade Fairs officer informs domestic producers that the EPC will have a stand at various fairs and is responsible for arranging the exhibits supplied by firms. In conjunction with commercial attaches, representatives of the EPC attend the fairs, answering questions and providing information on industry in Kenya. The Council then relays queries from potential buyers back to the firms concerned and helps them to take the necessary action. During 1972, the EPC participated in trade fairs in the United Kingdom, Hungary, Austria, Zambia, Sweden, Germany, the 3rd Asian International Trade Fair, held in India, and the All-Africa Trade Fair in Nairobi.

3.29. An information section was established in September, 1972 which helps to explain various import regulations, such as tariffs and quotas, to prospective exporters. This section now publishes an occasional bulletin on these topics and other relevant subjects. This aspect of the Council's work will be expanded in 1973 and a marketing advisor has been appointed. His duties will basically consist of studies of domestic production, in order to see which areas have unexploited export potential, and then to link producers to possible markets, which will involve liaison work with commercial attaches overseas.

3.30. In addition to these functions, the EPC also considers exporting problems that arise in various sectors of the economy. There are five sub-committees composed of members of the main Council, together with co-opted members who have special interests in the fields of manufacturing, communications and perishables, trade fairs, agriculture and publicity. These committees also consider ways of encouraging producers to enter the export market, such as improvement of the present system of duty drawbacks.

The Kenya National Trading Corporation

3.31. The financial year up to June, 1972 proved to be one of rapid growth for the Kenya National Trading Corporation (KNTC). Table 3.23 shows an increase in turnover of 25 per cent, the main factors being the growth in sales of sugar and cement. The expansion of domestic demand for

sugar is discussed in paragraph 6.12. In the case of cement, the rise is partly explained by the increased demand from the building and construction industry but also by the fact that 1971/72 was the first complete financial year in which the KNTC had control over distribution of cement. The other major change in the structure of turnover was a fall in sales of textiles and clothing. This would appear to be the result of the import restrictions imposed at the beginning of 1972. In principle, the KNTC has control over the specified imported goods and their domestic production but some local producers do not sell through the KNTC and this may be a factor contributing to the fall in turnover of some items.

CHAPTER 4—AGRICULTURE

Two features affecting agricultural production distinguished conditions in 1972 from those which prevailed in the previous year. The more important was the adequate level of rainfall, which was in marked contrast to the 1971 drought. The commodity price situation was also rather more favourable, although this was of lesser significance. Together, these two factors induced a growth in gross marketed production of over 22 per cent. Farmers' receipts rose by K£19.5 million, the highest absolute increase ever recorded. Supplies of food increased, with maize being especially abundant.

Marketed Agricultural Production

4.2. Marketed production at current prices is shown in Table 4.1. About half the growth in production was accounted for by permanent crops, especially coffee and tea, both of which showed increases of nearly K£4.2 million. However, the rate of growth in tea production, which had been severely affected by drought conditions in 1971, was a good deal higher than for coffee—36 per cent compared with 22 per cent. Another difference was that the bulk of the rise in the value of coffee production was due to better prices, whereas tea prices fell slightly. The value of the maize crop rose by K£3 million or 70 per cent; both production and prices increased. Another crop which displayed major growth was pyrethrum and farmers' receipts from it went up by 45 per cent. The growth of 55 per cent in the value of sisal cuttings was entirely the result of better prices.

4.3. The value of livestock production also rose markedly, by 22 per cent. The average weight of cattle marketed was higher due to the effect of better rainfall on grazing, which also promoted a rise in dairy production. Price conditions for both showed a considerable improvement over the previous year.

4.4. The significance of the major commodity groups in total production is illustrated in Table 4.3. The share of cereals and livestock products in the total did not change, but the significance of "all other temporary crops" declined slightly owing to the substantial increase in the value of permanent crops marketed.

4.5. As shown in Table 4.4, the rise in production was more or less equally distributed between large* and small farms. It is interesting to note that after rising for several years prior to 1967, the share of small farms in total marketed output has subsequently been stagnant. However, it is expected that in future years the significance of small-holdings is likely to grow gradually, primarily from rising pyrethrum, sugar-cane and tea production. This trend would be more pronounced if small-holder yields of coffee were as high and of the same quality as those on the estates.

*These are defined as whatever remains of the old "Scheduled Areas" and the large holdings in the "Coastal Strip".

*The following districts are excluded from this table:—

Nakuru, Laikipia, Uasin Gishu, Trans Nzoia, Baringo, West Pokot, Lamu and Tana River. The first four are predominantly large farm areas and crop areas for these are in the data for large farms.

+The method for obtaining the entries in columns (7) and (8) is as follows:—

- (a) For crops planted twice a year, the appropriate entries for short and long rains are added,
 (b) For tea and coffee, which are measured in the long rains only (hence no entries in columns (4), (5) copied from those obtained in the long rains,
 (c) For all other crops except cotton an average is taken of the entries made for the short rains and long rains.
 the "mixed crop" columns, addition produces a higher value than that given for total cultivation, owing to the incidence of multiple cropping. This applies also to the totals of the main groups i.e. to cereals, pulses etc.

The measurement of crop areas is undertaken using objective methods. For crop identification, however, it is sometimes necessary to rely on reports given by the farmers themselves. This applies particularly

Crop Areas, Livestock Numbers and Inputs Used

4.6. Data on crop areas and livestock numbers are set out in Tables 4.5 to 4.8. Although not all the information presented is for 1972, it can be assumed that there has been little overall change in crop areas and livestock numbers on small-holdings and among pastoralists. On large farms, perhaps the most notable feature was the further decline in the significance of sisal. Numbers of sheep and pigs on large farms also showed a considerable fall.

4.7. The value of agricultural inputs used is shown in Table 4.9. The figures suggest a substantial growth in the value of material inputs used. This rise was particularly prominent for manufactured feeds and bags (the latter due to the large maize crop), but significant increases were also apparent for fertilizers, other agricultural chemicals and livestock drugs and medicines.

Crop Production

4.8. *Maize*.— As shown in the series below, deliveries of maize, mainly from 1971 plantings, to the Maize and Produce Board increased by 45 per cent in 1972:—

	<i>Metric tons</i>
1968	353,000
1969	280,000
1970	206,000
1971	256,590
1972	372,985

This was the highest level of deliveries during the last five years and was the result of favourable weather, higher prices and increased plantings of hybrid seed.

4.9. However, partly because of greater availability of food in rural areas, consumption of maize purchased from the board fell by 7 per cent as shown by the figures below: —

	<i>Metric tons</i>
1968	86,679
1969	157,572
1970	158,238
1971	283,752
1972	262,667

As a result, the storage facilities of the board were severely strained and have had to be enlarged, although the 1971 crop permitted the establishment of a strategic reserve of over 1 million bags (90,000 metric tons) to guard against

*Provisional.

future shortfalls. The even larger crop from 1972 plantings aggravated the storage situation, and so exports were commenced in 1973. These two successive large crops have caused financing problems, which have been made more serious by the formation of the reserve and by exporting surpluses at a loss. However, they have enabled the board to increase subsidized sales for animal feeds and, during its current financial year, the board expects to make 400,000 bags (36,000 metric tons) available for this purpose.

4.10. In order to increase maize production, following the shortage experienced in 1971, the producer price was increased in September of that year from Sh. 30 to Sh. 35 per bag of 90 kilos. This price is also being paid for the 1972 planted crop which is still being delivered. Farmers' planting programmes for the current year have been undertaken on the basis of this price and, if weather conditions are favourable, another very large crop can be expected to be delivered from the end of 1973. To dispose of this, increased exports at a loss will continue to be essential, although some additional growth in domestic consumption will accrue from the needs of two industrial projects being established to produce cornflakes and maize starch (*see* Chapter 6).

4.11. *Wheat*.—The decline in deliveries of wheat, which set in after 1969, continued into 1972, as shown below: —

	<i>Metric tons</i>
1968	216,309
1969	241,558
1970	221,486
1971	205,743
1972	164,383

This level of deliveries was insufficient to meet Kenya's needs, and those of Uganda which are also normally supplied from Kenya. As a result, imports became necessary and most of the 64,821 metric tons received from overseas was required for re-export to Uganda and to maintain an adequate level of stocks. Actual requirements in Kenya during 1972, including seed, were 155,000 metric tons.

4.12. Because of the shortage of maize in 1970/71 there was a sharp increase in wheat flour consumption, which fell back during 1972, as the following figures show: —

1968	74,268
1969	75,847
1970	94,093
1971	116,431
1972	111,903

Despite this drop, there has been a compound annual increase of over 10 per cent since 1969, which seems likely to persist, and enlarged imports will be necessary unless production can be increased. This would require expansion of the area under the crop, which has been declining during the last few years: —

	<i>Hectares*</i>
1970	126,000
1971	118,000
1972	88,000

4.13. Some steps have been taken to increase output. Farmers are to be paid an additional Sh. 3/30 a bag for 1973 plantings, so that the net average return will be about Sh. 49 per bag of 90 kilos. Other developments expected to contribute to increased production include silo storage facilities at Narok, which will help to promote wheat production in Masailand. Improvements being effected to the Narok road will help to reduce the cost of bulk transport of the wheat to mills in Nakuru or Nairobi. However, to meet the current year's needs, further imports will be necessary to supplement the yield from the 1972 planted crop, which is now being consumed.

4.14. *Rice*.—The production of paddy, which is confined almost entirely to irrigation schemes, is discussed in paragraph 4.50.

4.15. *Pyrethrum*.—The recovery of pyrethrum production which began in 1970 continued in 1972: —

	<i>Metric tons (extract equivalent)</i>
1968	150
1969	81
1970	95
1971	143
1972	185

Small-holders are dominant in the production of this crop and now account for over 90 per cent of output. Production is concentrated primarily in Kisii District and on settlement schemes in Central Province. However, efforts are now being made to encourage cultivation in suitable areas of Meru, Embu, Kericho and Bungoma Districts.

*These figures differ from those shown in Table 4.7 and represent the Wheat Board's estimates of the area finally harvested.

4.16. In addition to increased production of flowers, a slight improvement in pyrethrins content was also achieved. This was partly the result of better clonal material planted during the last few years. Progress in this direction continues and two new nurseries for large-scale clonal propagation are being developed. Another major development in the industry is the inauguration of work on a new pyrethrum extraction factory.

4.17. World demand for pyrethrum, of which Kenya now supplies about 70 per cent, remains buoyant. A high level of through-put and sales of a more concentrated final product permitted economies in marketing and processing costs, and enabled the Pyrethrum Board to increase pay-out to farmers from Sh. 3/75 to 3/79 per kilo of flowers.

4.18.—*Sugar-cane*.—Sugar production in 1972 was only 90,300 metric tons, a decline of 27 per cent. This was the direct consequence of a fall in cane deliveries of 23 per cent, as illustrated below: —

	<i>Metric tons</i>
1968	947,181
1969	1,300,657
1970	1,451,200
1971	1,378,002
1972	1,062,295

4.19. It would seem that the drop in cane production affected all categories of growers, as shown in Table 4.10. However, the sharpest drop was in production from small-holders co-operatives, which fell to less than half its level in the previous year. In order to promote supplies to existing factories, substantial additional investment is now being made to increase production from the area already under cane, and to extend cultivation to new land. Some recovery of sugar production from these factories is expected during the current year, to be augmented by the output of a new factory now nearing completion at Mumias.

AREA OF CANE HARVESTED AND CANE PRODUCTION, 1971 AND 1972

Table 4.10

	HECTARES		PRODUCTION (<i>Metric tons</i>)	
	1971	1972	1971	1972
Factory Estates	8,593	5,415	434,270	351,967
Large Farms	7,063	6,557	532,155	452,399
Small-holders Co-operatives	2,616	1,930	189,661	86,872
Settlement Schemes	2,344	3,800	221,916	171,057
TOTAL	20,615	17,703	1,378,002	1,062,295

4.20. A review of sugar and sugar-cane prices was undertaken in 1972. As a result, the price of cane, which was a standard Sh. 42/25 per metric ton until then, was replaced by a differentiated price of Sh. 50 at the Coast and Sh. 52 for the rest of the country. The price of sugar paid to factories was increased from Sh. 905 per metric ton to Sh. 1,004. The increases were passed on to the consumer by a rise in the retail price of 20 cents per kilogram.

4.21. Some institutional developments, which, it is hoped, will promote more effective co-ordination of production and improved marketing, occurred in 1972. These included the creation of the Sugar Belt Co-operative Union in Nyanza and the setting up of the Kenya Sugar Authority. The functions of the authority will include effective and efficient development of sugar-cane production, advice on the price of cane to growers, the devising of rules and regulations for the industry, research, sugar-cane processing and the utilization of sugar by-products. It will also be responsible for developing and implementing a system of cane testing, the registration of all sugar-cane producers within factory zones and co-ordination of relevant statistical information.

4.22. *Cotton*.—Production in 1972 remained at more or less the same level as in the previous year.

	<i>Metric tons</i>
1968	14,279
1969	17,111
1970	14,017
1971	16,764
1972	16,981

The 1971/72 crop suffered from drought conditions late in 1971 and severe pest infestation in 1972. Strenuous efforts over several years have failed to achieve the objective of a substantial increase in production. The major factor in this has been that the return from cotton has been relatively unfavourable compared with that of other crops. In an effort to overcome this, the Lint and Seed Marketing Board has increased the price paid to growers. It has been able to do this because of buoyant international demand conditions for cotton. The domestic cotton manufacturing industry uses mainly BR grade cotton, but much of Kenya's crop is exported because it consists primarily of the longer staple AR cotton.

4.23. *Horticulture**.—As shown in Table 4.1, the value of horticultural products in 1972 increased by 24 per cent in terms of returns to farmers. This growth in output helped both to meet domestic demand and to increase exports. The total value of exports increased by nearly K£900,000, with over half of this increase being in exports of dried beans and pulses. There was

*Including output of all fruit, vegetables, potatoes and pulses. In Table 4.1 the category "other temporary crops" consists mainly of vegetables.

also a significant increase in volume of fresh products exported, particularly vegetables and flowers. This is shown in Table 4.11. Britain and West Germany remained the major overseas markets for horticultural products. The proportion of pineapples, both fresh and canned, in total exports has declined, and the fresh pineapple market is becoming increasingly competitive.

EXPORTS OF FRESH HORTICULTURAL PRODUCE, 1968-72

Table 4.11

	Volume (Metric Tons)	Value (K£)
1968	1,476	156,481
1969	2,519	267,026
1970	3,224	342,088
1971	5,123	543,600
1972	7,856	833,600

4.24. Severe shortages of air freight capacity continued to be experienced although efforts to increase this have shown some success in terms of space made available by northbound airline traffic, and attempts to secure further increases in capacity are continuing. Further developments to promote horticultural production were implemented in 1972. Two grading and packing stations have been established at Karatina and Yatta, in addition to the one opened at Machakos in 1971. Some of the financial resources for this purpose have been secured from the International Coffee Organization Diversification Fund. As indicated in Chapter 6, another factory to process passion fruit has been opened.

4.25. *Coffee*.—As shown in Table 4.12 coffee production in 1972 rose by 2,500 metric tons. All of this growth came from the larger estates—in fact, output from small-holdings fell fractionally. While the area under the crop was more or less unchanged on both estates and small-holdings, the average yield from the former remained high—1,015 kilograms per hectare compared with 510 kilograms from small-holdings. On the large holdings, production would have been even higher had adequate supplies of picking labour been available at the height of the harvest. Husbandry practices on small-holdings left something to be desired. A decline in the application of fertilizer and manure was apparent, and the sector has also suffered from a shortage of mulch material for several years.

COFFEE PRODUCTION, 1966-72

Table 4.12 '000 Metric Tons

	Estates	Small-holders	Total
1966	28.4	28.5	56.9
1967	19.2	28.2	48.0
1968	18.8	20.8	39.6
1969	26.8	25.6	52.4
1970	27.9	30.4	58.3
1971	31.5	28.0	59.5
1972	34.2	27.8	62.0

4.26. Another disturbing aspect of coffee production in recent years has been the decline in quality, particularly on small-holdings, but the estates have also been affected. This is illustrated in the table below, in the form of proportions of the crop in the various grades.

COFFEE QUALITY, 1969/70-1971/72

Table 4.13

	1969/70	1970/71	1971/72
PER CENT IN STANDARDS 1 TO 3			
Estates	21.6	11.7	10.3
Small-holders	49.0	38.9	23.5
PER CENT IN STANDARDS 4 TO 6			
Estates	72.9	82.3	84.0
Small-holders	47.0	56.1	68.8
PER CENT IN STANDARDS 7 TO 10			
Estates	5.5	6.0	5.7
Small-holders	4.0	5.0	7.7

4.27. The improvement in coffee prices was considerably better than the growth in output. The average price paid to farmers was K£373 per metric ton, a rise of 17 per cent over the average for 1971. This growth in prices reflected a general movement in world markets, but was also partly due to the fact that a greater proportion of the crop was exported to the higher return quota markets. During the 1971/72 international crop year, sales to quota markets amounted to 54,815 metric tons, compared with 36,813 metric tons in 1970/71. Prices have continued to rise into the current year and are K£75 per metric ton above those prevailing two years ago. It is expected that coffee prices will continue to remain buoyant for some time, because of the sharp fall in previously accumulated stocks of coffee, notably in Brazil, thus bringing current production more into line with world demand. How long these favourable demand and supply conditions last will depend primarily upon discipline among the producers.

4.28. *Tea*.—Tea production showed strong recovery from the effects of the drought in 1971, and production rose by 47 per cent, to 53,322 metric tons:—

	<i>Metric tons</i>
1968	29,764
1969	36,060
1970	41,077
1971	36,290
1972	53,322

4.29. As in 1971, small-holder production amounted to 25 per cent of the total. This proportion is expected to rise in the future as more small-holder tea reaches maturity and as the scope of the small-holder tea project expands. It would seem that the area under tea on estates is now more or less static. During 1971/72, another 7,000 hectares were added to the area under tea on small-holdings, so that the total now exceeds the area under the crop on estates. The number of small-holders growing tea has reached nearly 67,000. Plans are now being developed to expand small-holder tea by a further 18,200 hectares.

THE DEVELOPMENT OF SMALL-HOLDER TEA—TO 1971/72

Table 4.14

	Total Hectares at end of year	Number of growers at end of year
Up to 1964/65	5,133	22,343
1965/66	6,479	29,693
1966/67	8,424	32,599
1967/68	10,772	37,953
1968/69	13,409	42,596
1969/70	16,229	48,443
1970/71	19,230	53,400
1971/72	26,228	66,897

4.30. Factory construction to process tea already planted is proceeding—two more factories were completed during the year and three more are in process of development. Another significant development during the year was the completion of a factory to make green tea for export to Japan. An important factor in the success of the small-holder tea scheme is efficient transport. This depends primarily on good road communications in the tea areas, in order to transport leaf to the factories within a few hours of plucking. The major programme of construction of tea roads, which has been proceeding for several years, continued in 1972 (*see* Chapter 6).

4.31. While tea production registered major growth, prices remained weak. The overall average price received by farmers fell from Sh. 6/55 per kilogram in 1971 to Sh. 6/01 per kilogram last year. Prices remained weak in the first few months of the current year.

4.32. *Sisal*.—Sisal production has been falling fairly steadily for almost a decade, and was 41,210 metric tons in 1972, 30,000 tons below output ten years earlier. The area under sisal has fallen from 107,000 hectares to just over 73,000 during this period. During the years of low prices, which persisted until last year, very little new planting was undertaken and a large part of the existing area actually consists of old sisal, the yield from which is low. In fact, many estates abandoned production and adopted programmes of diversification into other crops. Small-holder marketed production, which used to amount to a few thousand tons, has virtually ceased. It used to be harvested almost entirely from hedgerows at times of high prices.

4.33. The yield of fibre from cuttings during the last few years was as follows: —

	<i>Metric tons</i>
1968	50,280
1969	49,834
1970	43,930
1971	44,826
1972	41,210

This secular decline has been due primarily to the development of synthetic substitutes, which have become increasingly competitive. It would seem that a good deal of new planting has taken place in response to high prices, although its effect will not be felt for some time, as sisal takes several years to mature. But even this is unlikely to reverse the trend of declining production.

4.34. Sisal prices showed dramatic recovery in 1972, after having fallen to their lowest level for many years. This recovery in price was in response to a substantial fall in world supplies, mainly as a consequence of drought. However, growers in Kenya were unable to take full advantage of the rise in prices because of forward sales made at the previous low prices. But, despite this, the overall average farm-gate price received by growers in 1972 for all grades was K£57 per metric ton compared with K£34 in 1971. The average on-farm price being received now is about K£100. Paradoxically, from a long-term point of view, the industry faces a further restriction in its output because of the current prices. This is because the higher the price of sisal the more competitive synthetic substitutes become. The present price of the fibre is well beyond the ceiling at which synthetics are competitive and will inevitably encourage the installation of new capacity to manufacture synthetics. Experience with other artificial substitutes suggests that the costs of producing these decline sharply as volume grows.

Livestock Production

4.35. *Dairying*.—As shown in Table 4.15, dairy production responded to favourable weather conditions and the volume of milk handled by the Kenya Co-operative Creameries (KCC) rose by 27 per cent in wholemilk equivalent. In order to dispose of this increased production, the KCC achieved substantial increases in sales, primarily in Uganda and Tanzania. Although domestic consumption also increased slightly, its growth was held back by two price increases, in July, 1971 and May, 1972.

DAIRY PRODUCTION, 1969-1972

Table 4.15 '000 litres wholemilk equivalent

	Whole-milk Sales	MILK USED FOR MANUFACTURE OF						All Milk
		Cheese	Butter	Ghee	Dried Powdered Milk	Other Milk products	Total	
1969	101,982	4,474	88,918	21,107	13,099	4,660	132,258	234,240
1970	103,011	4,606	105,395	18,905	17,625	7,286	153,816	256,827
1971	105,779	4,715	79,163	13,398	18,739	7,781	123,796	229,575
1972	119,662	7,095	102,982	26,272	24,841	11,479	172,670	292,331

4.36. It is apparent from Table 4.15 that a greater part of growth in the volume of milk handled went into manufactured goods rather than sales of liquid milk. This factor has important financial implications for the KCC. Despite its achievements in increasing sales, the KCC faces some complex economic problems arising out of the 45 per cent increase in the milk price paid to farmers since July, 1971 (from 53 cents per litre to 77 cents). A major increase in the producer prices, together with the substantial rise in prices paid by consumers, had the effect of promoting milk production while slowing down the growth in consumption, particularly of liquid milk. A growing proportion of output has therefore had to be diverted into manufactured products. The return from these is lower than that from liquid milk, and unsold stocks have also accumulated. This has led to a difficult financial situation and underlined the need for corrective action to resolve the contradictory price structure that now exists.

4.37. *Beef*.—As shown below, deliveries of cattle and calves to the Kenya Meat Commission (KMC) dropped by 5 per cent in 1972.

Head of Cattle

1968	184,200
1969	184,700
1970	196,100
1971	209,900
1972	199,100

The decline was almost entirely the result of low deliveries in the last quarter of the year, mainly a consequence of restrictions on the movement of livestock for veterinary reasons, which particularly affected Kajiado District. It is also likely that fewer cattle from the Somalia/Kenya border area are now being marketed in Kenya.

4.38. However, as shown in Table 4.16, while the numbers slaughtered by the KMC declined, the actual volume of meat produced was higher, because of an improvement in the quality of the animals delivered, owing to better grazing conditions during the year. The additional meat produced was directed to export markets, so that the proportion of sales outside Kenya reached 54 per cent, compared with just over 50 per cent in 1971. An important recent development in marketing has been the export for the first time of frozen meat to Western Europe. Hitherto, exports to this area have been barred by veterinary restrictions. The constraint to growth now is not so much marketing outlets as production. Efforts to increase output are continuing, and include substantial investments in the range areas and improved marketing facilities. The beef grading structure was redefined in 1971 with a view to encouraging production of higher quality meat, and producer prices were increased. In 1972, producer prices were again raised, by levels varying, according to grade, between 4.4 per cent and 15.9 per cent.

PRODUCTION AND DISPOSAL OF BEEF BY THE KENYA MEAT COMMISSION, 1966-72

Table 4.16

	Total Production (metric tons)	Local Sales (metric tons)	EXPORTS		Percentage of Production Exported
			Chilled or Frozen (metric tons)	Canned (metric tons)	
1966	27,867	13,315	2,848	11,704	52.3
1967	31,449	14,692	3,451	13,306	53.3
1968	30,445	16,575	3,376	10,494	45.6
1969	27,524	15,366	1,531	10,627	44.2
1970	29,395	15,615	2,680	11,100	46.9
1971	27,316	13,582	2,780	10,954	50.3
1972	28,605	13,048	3,610	11,947	54.4

4.39. *Sheep and Goats.*—Deliveries of these to the Kenya Meat Commission are shown in Table 4.17. Sales of sheep declined somewhat but there was a substantial increase in slaughterings of lambs. The number of goats slaughtered remained more or less unchanged.

4.40. *Pigs.*—The decline in pig production, which had been apparent in 1971, continued into last year. Its causes lay mainly in the shortage and high price of feeds throughout 1971 and in the earlier part of 1972. Later in the year sales of subsidized maize for feeds were resumed by the Maize and Produce Board.

DELIVERIES OF SHEEP, LAMBS AND GOATS TO
THE KENYA MEAT COMMISSION, 1966-72

Agricultural Development Services

4.41. *Agricultural Education and Training.*—Agricultural training available ranges from instruction in schools to degree courses in the University of Nairobi. Total enrolments at the more formal agricultural training institutions are shown in Table 4.19. Most of the increase in 1972 was in enrolments in the Faculties of Agriculture and Veterinary Medicine at the University. The first 39 graduates from the Faculty of Agriculture came out in March of this year, and the majority have joined the Ministry of Agriculture, together with 19 graduates from the Faculty of Veterinary Medicine. A development at the University in 1972 was the establishment of a post-graduate diploma in agricultural education. A post-graduate degree in agricultural extension is to be initiated in July of this year.

4.42. At Egerton College, there was also a significant increase in enrolments, which are now fixed at a maximum of 650 students, two-thirds of whom are Kenyans, the rest being from other African countries. A new course in food science and technology is being planned for the college.

TOTAL ENROLMENTS AT AGRICULTURAL TRAINING INSTITUTIONS, 1970-1972

Table 4.19

	Numbers		
	1970	1971	1972
Degree Level—			
University of Nairobi, Faculty of Agriculture	40	81	120
Faculty of Veterinary Medicine	75	210	264
Diploma Level—			
Egerton College	585	590	635
Certificate Level—			
Embu Institute of Agriculture	160	160	160
Animal Health and Industry Training Institute	255	255	255
Short-term Vocational Courses—			
Narosura Farm Mechanization Training Scheme	120	120	60
Naivasha Dairy Training School	120	120	120

4.43. Expansion of the Embu Institute of Agriculture is under way and, when completed, will enable the institute to accommodate 250 students. A similar institute is being built at Butere, also with a capacity of 250 students, the first of whom are expected to be admitted in May, 1974. The Animal Health and Industry Training Institute at Kabete continues to offer training in animal health, range management and leather manufacture. A small number of women are to be admitted to the Institute for the first time this year. The training programme at the Naivasha Dairy Training School has been expanded to include courses in sheep and goat husbandry. The drop in enrolments at the Narosura Farm Mechanization Training Scheme was due to the fact that no courses were offered there in the second half of last year. Development of Farmers Training Centres continued—a new one at Busia is nearly ready and planning of four others, at Ol Joro Orok, Kamwiti, Bungoma and Baringo, is at an advanced stage. Agricultural training is also to be offered at two multi-disciplinary District Development Centres to be built at Embu and Kwale.

4.44. *Agricultural Research.*—In 1972, current and newly started research projects yielded many results of practical value, adding to the considerable body of technical information already available for improving productivity. Areas in which progress was made included the following: —

- (a) *Maize.*—Breeding and agronomy programmes are now supported by plant physiological investigations, providing an insight into the reaction of the maize plant to its environment. Agronomic research has moved into maize growing areas hitherto not under study. Development of high lysine maize has reached a very advanced stage.
- (b) *Pulses.*—A project to study the agronomic factors governing the profitability of canning beans became fully operational in 1972, and now includes the establishment of a collection of bean varieties as the basis for the improvement of bean production, particularly in small-holdings.

- (c) *Oil Crops*.—Breeding of better sunflower varieties continued, and received the valuable support of crop physiological research carried out by the University of Nairobi. Negotiations with a donor government on technical co-operation in sunflower research resulted in an agreement to begin such co-operation early this year. A modest programme on the improvement of rape-seed was initiated at the Plant Breeding Station, Njoro.
- (d) *Horticulture*.—Research on grapes demonstrated the technical feasibility of grape production in Kenya. Negotiations with the Diversification Fund of the International Coffee Organization led to an agreement for the financing of the intensification of horticultural research, to be implemented from 1973 onwards.
- (e) *Coffee*.—Recommendations for the control of coffee pests and diseases are continuously being revised, pending the results of the long-term breeding programme for disease-resistant varieties, which began in 1971. New methods of high-density, intensive coffee production are now being tested on a small-scale by commercial coffee producers.
- (f) *Cotton*.—Results from research and demonstration plots show that very high yields can be achieved on rain fed small-holder plots, if pests are adequately controlled. Negotiations held in 1972 with the Cotton Research Corporation of London have led to an agreement on intensified co-operation, to take effect in 1973. Construction of a Cotton Research Station at Tebere continued.
- (g) *Pastures*.—Research to evaluate systems of pasture and ley production and utilization continued in 1972. Study of the improvement to the low seed production rate of tropical grasses has yielded much information of economic importance. Work on the selection and breeding of pasture grasses continues to receive high priority in the broad pasture research programme.
- (h) *Seed Certification*.—The Kenya Inspection Service for Seeds expanded its activities in response to the rapidly increasing demand for certified seed. Certification and production of wheat seed has now been properly organized.
- (i) *Soil Survey*.—This project became operational in 1972 and has already led to the publication of a number of site evaluation reports. The team concerned has undertaken a major survey of the soils of the Mbere Division in Embu District. This study will be of value for other similar semi-arid areas.
- (j) *Pesticide Residues*.—Agreement was reached with the Centre for Overseas Pest Research, London, on co-operation to reduce pesticide residues in agricultural crops. The first steps towards the implementation of this project include the overseas training of a scientific officer and the conversion of a building for research use.

4.45. Research in animal husbandry and veterinary matters has also continued. Animal husbandry studies are carried out mainly at Naivasha and Lanet. At Naivasha, problems of long intervals between calvings and high losses in calf rearing have been investigated to find practical solutions in breeding, feeding, herd management and fertility. Various aspects of pig, sheep and goat production are also being studied there. At Lanet, research has been going on for several years on intensive beef production in feedlots. Results suggest that such beef production is economically viable in Kenya.

4.46. *Farm Mechanization.*—The operations of the Tractor Hire Service of the Ministry of Agriculture are illustrated in Table 4.20. During 1971/72, the service operated 50 tractors. However, its activities were limited by the age of its equipment, and the area worked declined accordingly.

AREA WORKED BY THE TRACTOR HIRE SERVICE, 1967/68—1971/72

Table 4.20 '000 Hectares

	1967/68	1968/69	1969/70	1970/71	1971/72
Area Ploughed	5.7	6.9	4.4	4.0	3.1
Area Harrowed	16.1	20.2	12.1	7.1	3.2
Area Planted	5.3	5.3	4.0	2.0	1.5
TOTAL	27.1	32.4	20.5	13.1	7.8

4.47. An important development in this field was the setting up recently of the Mechanization Extension Service, with the objective of assisting farmers in mechanization problems, including mechanization of small-scale agriculture, through giving advice on such matters as the type of agricultural operations which can be mechanised and the nature of the equipment to be used. This service will utilize the results of work done by the Agricultural Machinery Testing Unit at Nakuru. The Unit carries out practical field trials to determine the performance of different types of machinery, mechanization requirements under different local conditions, labour needs in various agricultural operations and related problems.

4.48. *Soil Conservation.*—The Soil Conservation Service is responsible for the construction of dams and waterholes (mainly in high potential areas—in the range areas such activities are performed by the Water Department and the Range Management Division of the Ministry of Agriculture), drainage and terracing works, bush clearing, other infrastructure activity, such as demarcation and fire-breaks, farm mapping and advice on farm plans. The Service operates from 7 stations located in different parts of the country. In 1972/73, ten waterholes and four dams were built, 2,000 hectares terraced or supplied with drainage works and 1,200 hectares cleared of bush. Infrastructure work amounted to 25 per cent of the total work done.

4.49. *Irrigation.*—The area irrigated rose by 9 per cent in 1971/72 and the gross output of the irrigation schemes by 19 per cent. However, the number of settlers grew rather more slowly, by 6 per cent. Details for each of the irrigation schemes are presented in Table 4.21.

4.50. The Mwea rice scheme remains the most important irrigation project, accounting for well over half the output from the schemes. The figures shown in Table 4.21 refer only to the area actually cropped and do not reveal the major development proceeding at the scheme to expand the area under cultivation by another 1,800 hectares. The milling facilities for

handling the crop are also being expanded. At Galole, on the Tana River, the area cropped was virtually unchanged, but the output and value of the cotton crop increased substantially. For the Perkerra scheme, 1971/72 was a relatively successful year, and production partially recovered from the setback of the previous year. The area cropped went up substantially, although the volume of production, which consists of onions and chillies, did not rise at the same rate. The Ahero Scheme in West Kano, which has been developed in the last few years, did not show any significant changes last year. This is a pilot scheme, and work during the year was confined mainly to assessment of land compensation and preliminary engineering design. The paddy grown on this scheme is of the *basmati* variety which fetches a higher price than the *sindano* grown at Mwea. At Bunyala, another rice scheme, the area cropped doubled because two crops were harvested in one year for the first time. However, yield per hectare declined owing to the incidence of disease.

4.51. *Range Development and Livestock Marketing.*—The development of new range schemes and work on projects already initiated continued during the year. In North-Eastern Province, pan construction work in the pilot area known as the Madogashi/Kalalut grazing unit was completed. In addition, ten boreholes were drilled and over 15,000 sq. kilometres of range land surveyed. Range surveys were also completed in Marsabit and Kitui Districts, and a survey of the Tana River District initiated. Development of group ranches in the Rift Valley and Coast Provinces continued. A critical aspect of range development is the improvement of marketing facilities. This is the responsibility of the Livestock Marketing Division of the Ministry of Agriculture. In 1972, the Division purchased 54,000 head of cattle, which included slaughter animals as well as young stock for finishing on the new ranches or in feedlots. The Division is also responsible for the development of stock routes, and its activities included the drilling of boreholes and the provision of other facilities on holding grounds.

4.52. *Agricultural Credit.*—There are eight parastatal organizations in the country which advance credit to farmers. These are the Agricultural Finance Corporation (AFC), the Co-operative Bank, the Kenya Tea Development Authority, the Pyrethrum Board, the National Irrigation Board, the Agricultural Development Corporation (through its subsidiaries), the Horticultural Crops Development Authority and the Cotton Lint and Seed Marketing Board. Credit from all these agencies, except the AFC, is intended for specific enterprises such as tea, pyrethrum and cotton. Advances by these agencies, excluding lendings under the guaranteed minimum return (GMR) system, are shown in Table 4.22. Total lendings were not very different from those in the previous year; the proportion going to large farmers was 26 per cent. If the K£4.7 million GMR advances in 1971/72 (which went mainly to large farmers to finance current operations) were included, this proportion would be higher. Much of the large farm credit was for range areas, under-

lining the major effort going into their development. Commercial banks also lend to farmers and, at the end of 1972, outstanding bank credit to the agricultural sector amounted to K£12.5 million.

4.53. Agricultural Development Corporation.—The land transfer activities of the Corporation have been taken over by the Ministry of Lands and Settlement. This had been an important function of the Corporation and after its cession, a working party was set up to examine the future role of the Corporation in the agricultural sector. The farms retained by it are devoted entirely to the production of strategic agricultural inputs, which include hybrid maize seed (of which the Corporation is the largest producer in the country), and high grade dairy cattle, sheep and pigs. The Corporation's objective of producing 1,000 in-calf heifers for sale to small farmers as dairy cattle was achieved. A new venture was the establishment of a commercial beef feedlot at Kitale.

4.54. *Co-operative Societies.*—The number of registered co-operative societies is shown in Table 4.23, and, net of liquidations, rose from 1,554 in 1971 to 1,632 in 1972, but only 1,059 were active. New registrations last year numbered 84 compared with 55 in 1971. The total turnover of the agricultural societies was just under K£21 million, and was dominated by 3 products, coffee (48 per cent), milk (19 per cent) and pyrethrum (12 per cent).

NUMBER OF REGISTERED CO-OPERATIVE SOCIETIES				<i>Numbers</i>
Province	To 31ST DECEMBER, 1972			Registrations in 1972

*Country-wide organizations are those whose operations and membership is not confined to any one particular province and include the K.C.C., K.F.A., K.P.C.U., the Co-operative Bank, etc.

4.55. *The Special Rural Development Programme.*—A major evaluation of the SRDP was completed last year. Following this, it was decided to limit the role of the SRDP to the testing of a variety of experimental projects of national importance, rather than expanding it as another form of area development. The experimental work is intended to achieve results which can be replicated throughout the country. In 1972/73, a sum of K£591,000 was ear-marked for the programme. Experience so far has contributed to the decision to strengthen planning at the district level by making grants to district development committees for expenditure on local projects, which include agriculture as well as other aspects of rural development.

Land Adjudication and Registration

4.56. The land adjudication programme has continued to build up momentum. Details of the achievements of the programme during 1972 are shown in Table 4.24. The total area of land registered, adjudicated or under adjudication had reached very nearly 5 million hectares and was 21 per cent higher than the corresponding area a year earlier. Nearly 900,000 hectares were actually registered. Registration and adjudication now cover over 37 per cent of total registrable land. Adjudication is very nearly complete in Western Province and substantial progress was also achieved in other provinces.

PROGRAMME OF LAND REGISTRATION AND ADJUDICATION AS AT 31ST DECEMBER, 1972*

*All former "trust" land.

**In Narok 122 holdings were registered and 3 holdings adjudicated and in Kajiado 33 holdings were adjudicated.

+In Laikipia "trust" land accounts for only 8% of the area of the district.

4.57. The number and area of holdings added to the land register is set out in Table 4.25. Compared with 1971, the number of holdings registered went up by 119 per cent and the area by 267 per cent. The disparity in the rates of growth between the two was because a high proportion of the area registered consisted of large group ranches in Kajiado and Narok districts.

*No holdings were added to the land registries in the other districts during 1970-1972, as adjudication was not fully completed in any section.

+In 1971, 36 holdings in Kirinyaga and 27 holdings in Narok were added to the land register.

In 1972, 95 holdings in Narok were added to the land register.

Land Settlement

4.58. As shown in Table 4.26, there was no change in the area added to settlement under the "million acre" scheme in 1972, but several hundred additional families were moved into schemes which had been in the process of development. However, the problem of non-repayment of loans remains serious. At the beginning of this year, 52 per cent of the amount billed was unpaid.

4.59. The policy of settlement on sub-divided holdings has been discontinued and a new project adopted for the next phase of the settlement programme. The schemes now being developed are known as *shirika* settlement. Under this project, no sub-division is made—the large holding acquired by purchase is kept intact, to be run as a single unit by members of the *shirika* scheme. Each member gets a plot of about one hectare to grow crops for his own use, and is paid a wage for working on the rest of the farm, which is under the direction of a manager. When a mixed farm is acquired by the Department of Settlement for a scheme of this nature, its membership

potential is assessed. The basis of this assessment is a target income of K£100 for each member. Membership is open to landless and unemployed people. The major benefit of *shirika* schemes over the sub-division approach is the greater efficiency derived from avoiding sub-division into individual holdings.

THE PROGRESS OF LAND SETTLEMENT TO 1972
(Cumulated totals as at the end of each year)

Table 4.26

	Hectares Purchased	Total Number of Schemes Planned	Total Number of Schemes Settled	Total Number of Families Settled
1963	235,988	59	49	10,441
1964	342,913	94	77	19,300
1965	425,586	119	98	26,089
1966	471,076	135	109	29,096
1967	479,665	135	118	31,531
1968	484,984	137	130	33,195
1969	490,993	139	134	33,581
1970	494,391	140	135	33,883
1971	494,849	140	135	35,528
1972	494,849	140	135	36,118

4.60. Up till April, 1973, 43,264 hectares had been taken over by *shirika* schemes, at a cost of K£2.1 million, and the total number of farmers settled so far is 6,083. A major expansion of the project is now being planned.

4.61. The value of sales by co-operatives on settlement schemes is shown in Table 4.27. During 1972, this increased by 20 per cent. However, it is known that some sales also take place outside co-operative societies, so that the aggregate value of marketed production is higher than the figures show. The growth in sales originated entirely from milk and pyrethrum.

CHAPTER 5—NATURAL RESOURCES

Water Supplies

The importance attached to water supplies by the Government is underlined by the figures in Table 5.1, which show that aggregate expenditure, including that of the local authorities, increased by 47 per cent during 1972/73 and nearly doubled over the last two years. Expenditures by all the Ministries and departments involved has grown. The bulk of Government expenditure is undertaken through the Water Department, which has primary responsibility for the development of water supplies. There was a particularly sharp growth in local authority expenditure, accounted for primarily by Nairobi City Council.

CENTRAL GOVERNMENT AND OTHER PUBLIC AUTHORITY DEVELOPMENT EXPENDITURE ON
WATER SUPPLIES AND RELATED SERVICES, 1968/69—1972/73

* Provisional

5.2. *Water Department.*—In order to streamline the machinery required to fulfill the programme to provide piped water to all homes within the next 20 years, changes were made to the organization of the Water Development Division of the Ministry of Agriculture during 1972. It has now been renamed the Water Department and operates as a distinct unit within the Ministry. Its functions include the conservation, extraction, development, operation and maintenance of water supplies. It also has overall responsibility for matters relating to the control and prevention of water pollution.

5.3. Details of the expenditure of the Water Department during 1972/73 are shown in Table 5.2. Sixty-five per cent of total expenditure went to rural supplies, compared with 47 per cent during the previous year. There was a ten-fold increase in outlays on surveys of water resources and a drop in expenditure for range water.

DEVELOPMENT EXPENDITURES FOR WATER SUPPLIES AND RELATED SERVICES BY THE
WATER DEPARTMENT, 1968/69—1972/73

* Provisional.

5.4. Details of the Department's rural water supply schemes are set out in Table 5.3 by province. The number of projects rose by five and their cost by 53 per cent compared with last year. The entire increase has been in the larger projects.

RURAL WATER SUPPLY PROJECT SCHEMES OPERATIONAL OR EXPECTED TO BE OPERATIONAL BY JUNE, 1973

Table 5.3

PROVINCE	Small Projects (less than K£ 10,000)		Larger Projects (K£ 10,000 and over)		All Projects	
	No.	Cost (K£)	No.	Cost (K£)	No.	Cost (K£)

Western	—	—	3	110,000	3	110,000
TOTAL	25	115,700	15	756,400	40	872,100

5.5. The number of "gazetted" schemes which the Department operates and maintains now stands at 132 (compared with 107 last year), 92 of which are urban. In addition, the Department is responsible for 115 "non-gazetted" schemes, located primarily in institutions. The urban schemes are almost

entirely in small urban centres and the Department plans to increase their number by 50. At present, the range water programme is concentrated mainly in North-Eastern Province, although plans are well advanced to supply water to 350 ranches in 15 other districts.

5.6. A K£12.5 million scheme to develop water supplies from the Sabaki River to supply Malindi and other nearby beach resorts is to be initiated in the near future. This is likely to be the Department's largest single project over the next few years.

5.7. *Mombasa Pipeline Board.*—The Board is responsible for supplying water to Mombasa. General shortages and breakages in the supply system have continued and it is evident that the level of supplies to Mombasa has to be increased and the installations improved. Consequently, plans are under way to carry out expansions and improvements at a cost of about K£1 million.

5.8. *Ministry of Health.*—The Ministry of Health continues to pursue its demonstration programme, which consists of a large number of small schemes widely distributed throughout the country, as shown in Table 5.4.

WHO/UNICEF ASSISTED RURAL WATER SUPPLY PROGRAMME IN KENYA, 1964/65-1972/73

Table 5.4

	Number of Schemes	Number of Districts involved	Total Cost	Value of UNICEF contribution		Estimate of Number of persons benefitted	Average cost per scheme K£	Average cost per capita KSh.

1972/73	82	28	122,762	42,762	35	76,300	1,497	32.18

5.9. *Ministry of Lands and Settlement.*—The Department of Settlement has for many years undertaken water development for its settlement schemes. By the end of last year, 43 schemes had been completed at a cost of K£314,486. Another 14 schemes, to serve 4,844 plots, are being carried out and should be completed by the end of 1973.

5.10. *Ministry of Co-operatives and Social Services.*—The water development activities of this Ministry are related to the self-help schemes which it assists and promotes. Details are shown in Table 5.5. The increase in the value of these schemes slowed down after rising sharply in 1971.

VALUE OF COMMUNITY SELF-HELP WATER SUPPLY AND IMPROVEMENT SCHEMES,
1969-72

Percentage of Total Cost	%	67.6	86.7	64.4	68.7

* Provisional.

5.11. *Local Authorities.*—Nairobi City Council continues to account for the major part of total expenditure on water by local authorities. The bulk of its outlays are going into the Chania Water Scheme, the first phase of which is almost complete. This scheme is planned in three phases and will ensure adequate water supplies for Nairobi for many years. Although still small in absolute value, the outlays of County Councils on water schemes are expected to more than double in 1973.

CAPITAL EXPENDITURE ON WATER SUPPLY UNDERTAKINGS
BY LOCAL AUTHORITIES, 1968-1973

Table 5.6

	K£'000					
	1968	1969	1970	1971	1972	1973*
Municipalities	587	165	380	1,615	1,498	1,933
County Councils	23	27	15	23	154	353
TOTAL	610	192	395	1,638	1,652	2,286

*Provisional.

5.12. *Groundwater.*—Groundwater is an important source in areas which lack permanent rivers and streams. Exploitation of this source is encouraged through a borehole subsidy paid by the Government. Details of the number of boreholes drilled and the subsidy paid are set out in Table 5.7.

BOREHOLES DRILLED AND SUBSIDY PAID, 1967/68-1971/72

Table 5.7

	Unit	1967/68	1968/69	1969/70	1970/71	1971/72
Boreholes Drilled	No.	54	81	98	83	67
Successful Boreholes	No.	48	44	67	64	65
Percentage Successful	%	88.9	54.3	68.4	77.1	97.0
Subsidy Paid	K£	2,793	4,049	3,875	1,588	1,456

5.13. *Dam Construction.*—Conservation of surface water through dam construction is promoted by the provision of a 25 per cent subsidy for all dams built in areas with average monthly precipitation of more than 100 mm. and of 40 per cent in areas with lower rainfall. In 1971/72 expenditure on dam construction by Government units (some financed by private funds) was as follows:—

North-Eastern Province	K£78,000
Eastern Province	K£25,000
Rest of the Country	K£95,000

TOTAL	K£ 198,000
-------	------------

The size of the dam construction programme is to be enlarged in the future.

Fisheries

5.14. The size and value of the catch in 1972 is illustrated in Table 5.8. Its volume, although 6 per cent higher than in 1971, remained below that of the two previous years. The value to fishermen of the catch has been more or less constant for the last three years.

5.15. The freshwater catch from Lake Victoria and Lake Rudolf increased significantly, but there was a marked drop in production from Lakes Baringo and Naivasha. The freezing factory at Lake Baringo was closed for most of the year, thus cutting off the main outlet for fish. At Lake Naivasha, the cause of the decline is more difficult to determine—it may be linked to biological factors reflecting apparent overfishing in previous years.

5.16. The marine catch went up by 13 per cent over the previous year but there was a sharp drop in landings of crustaceans.

5.17. The output of deep-sea fishing, consisting mainly of tuna and allied products, is not shown in Table 5.8. This catch is landed by Japanese vessels and handled by a joint Japanese/ICDC firm, and in 1972 amounted to 7,441 metric tons.

QUANTITY AND VALUE OF FISH; LANDED, 1970-72

Forestry

5.18. The extension of the area of planted forest in 1972 was, at nearly 9,000 hectares, more than for several years, bringing the total planted to nearly 129,000 hectares. Rapid development of the Turbo Afforestation Scheme continued during the year, with 1,462 hectares being planted. The total area of forest in this scheme now exceeds 6,500 hectares, and it is being developed to supply the pulp and paper mill being built at Webuye (*see* Paragraph 5.23).

5.19. The Rural Afforestation Extension Scheme, launched two years ago, continued to make progress. In 1972 it was extended to three more districts and another 16 are to be covered by the end of this year.

5.20. Loss of forest through fire was greatly reduced in 1972, to less than 100 hectares compared with 14,500 in 1971. The primary reason for this was that weather conditions were less dry in 1972, although there were also improvements in measures to combat outbreaks of fire.

5.21. Sales of forest products are shown in Table 5.10. These rose a little in 1972, mainly to meet rising domestic demand. Exports of sawn timber during the year fell sharply after rising steadily for many years. The main reason was the drop in exports to the partner states, from 19,715 cu. metres in 1971 to 4,121 cu. metres during 1972.

SALES OF FOREST PRODUCTS, 1966-1972

* Provisional.

5.22. Exports of charcoal dropped from 58,235 metric tons in 1971 to 11,000 tons in 1972. This decrease was the result of a deliberate effort by the Government to cut down production for export, because this trade was fed by indiscriminate felling of forest and woodland, particularly at the Coast.

5.23. Forest-based industries continue to be developed. A third plywood mill, currently under construction at Eldoret, is expected to start production at the end of the year. In addition, arrangements are being made to build two more mills, one in the Transmara area and the other to the north-east of Mount Kenya, and a fibre board mill is being built at Elburgon. By far the largest forestry-based industrial project, and one of the largest enterprises in the country, is the pulp and paper mill under construction at Webuye. Work on the mill is well advanced and production is expected to commence next year.

Wildlife

5.24. The progress of land registration, particularly in pastoral areas, and increasing pressures on available land, because of rapid population growth, have raised new issues affecting the management of the country's wildlife resources. These are now under discussion and a comprehensive statement of official policy will be contained in the forthcoming Wildlife Management Bill, expected to be debated in the National Assembly later this year. The bill will also contain details of the proposed merger of the National Parks organization and the Game Department.

5.25. Systematic research on effective utilization of wildlife resources in Kenya was initiated in June, 1972, when the Wildlife Management Project was started in Kajiado District. (A pilot project had been in operation since the beginning of the year.) It is envisaged that successful aspects of the project, which aims to maximise returns from wildlife resources, will be replicated in other districts of Kenya. The initial emphasis has been on establishing a successful cropping programme which will allow a sustained annual off-take to be converted to meats, hides and other by-products for the benefit of land-owners. Techniques of capture, field processing and marketing animals and products are also being considered. Since such an operation is relatively new to Kenya, markets will have to be developed and tested as supplies become available. The project is being jointly financed by UNDP/FAO and the Game Department.

5.26. An increasing amount of education work to promote public awareness of the value of wildlife is also going on. In 1972, there were some 169 clubs organized by the Wildlife Clubs of Kenya, with more than 7,000 members in secondary schools and training colleges. Following the completion of a new headquarters and the purchase of mobile film and library units, the

society's activities in encouraging youth participation in wildlife conservation have expanded substantially. Wildlife conservation in Kenya also benefits from the activities of the East African Wildlife Society which, in addition to financing its own projects, acts as an agent for projects financed by individuals and international conservation bodies. During 1972, the Society financed expenditures for a major study on the future management of Tsavo National Park, for anti-poaching work in the Masai Mara Game Reserve and for a preliminary study of visitor/vehicle pressure within Kenya's national parks as well as other projects to the value of some K£5,000.

5.27. Population pressure and changing land use in the various wildlife dispersal areas have a bearing on the future viability of the national parks and game reserves. During 1972, several measures that would benefit local inhabitants whilst maintaining the tourist potential of these areas were considered. A scheme was designed to provide the Amboseli area with five new watering points so that the Masai would no longer have to graze their cattle in the area that had been set aside as a future national park. A similar scheme, on a much smaller scale, has been drawn up for the Saiwa Swamp Sitatunga Sanctuary. The Government is also seeking assistance to develop and manage wildlife viewing activities in the dispersal areas of the Nairobi National Park on behalf of the ranchers in the area.

5.28. The number of visitors to national parks is shown in Tables 7.13 and 7.14. Plans are under way to extend the national parks system to include four new national parks (Lake Hannington, Kiunga, Kisiti and East Rudolf) and expand two existing ones (Lake Nakuru and Nairobi). New Game Reserves are to be established in Rahole, Lamu and Koru and the Samburu/Isiolo Game Reserve is to be extended to incorporate migratory routes of elephant and Grevy's zebra.

5.29. Table 5.11 shows the revenues of the Game Department from its various activities. This represents only a part of direct revenues from game utilization in Kenya.

5.31. The major feature of the mining industry during the year was the continued development of the two large mineral deposits mentioned in last year's *Survey*. One of these is the fluorspar mine in the Kerio Valley. An initial fluorspar shipment of 12,000 metric tons to Japan has been made with a view to establishing a market outlet in a major consuming country. New concentrating facilities are expected to be in operation by the end of next year to improve the final product, which will also fetch a higher price in export markets, and a new road to the nearest railway station has been built for K£350,000. The second significant recent mining operation is at Kinangoni at the Coast. Steady development of this zinc, lead and silver mine is proceeding. A mobile crushing, milling and concentration plant is to be set up soon and first recovery of concentrates is expected later this year.

5.32. Development at another coastal site, Mrima Hill, where deposits of rare metals are located, has been held back owing to difficulties in evolving an economic method of recovery. However, exploration work is continuing elsewhere at the Coast in a systematic search for other mineral deposits.

5.33. Petroleum exploration is being intensified, mainly in North-Eastern Province but also at the Coast. Two more firms have been licensed to carry out searches and the area is now divided into eight zones for prospecting purposes. One of the new licences is for the off-shore area and applications are being considered from other oil firms seeking off-shore prospecting rights.

5.34. In value terms, soda ash is still the most important mineral item. The size and direction of its exports are shown in Table 5.15. Although the quantity exported declined slightly, better prices were obtained during the year.

CHAPTER 6—MANUFACTURING, ELECTRICITY, BUILDING AND CONSTRUCTION

Manufacturing

The growth of industrial production in real terms was a good deal slower in 1972 than the rate achieved in 1971, as shown in Table 6.1. The overall rise in the volume of industrial production was 7.3 per cent, more than 1 percentage point below the development plan target of 8.4 per cent. However, it is likely that the actual increase in production was slightly above 7.3 per cent because the index of production in Table 6.1, in which the base year is 1969, does not fully reflect the impact of new manufacturing plants opened more recently.

6.2. Various factors contributed to the slower expansion of production. In some sectors plant capacity acted as a constraint. This was especially so at the Mombasa oil refinery, whose output is of considerable significance within the industrial sector. Although rapid expansion of the plant is taking place, its throughput during 1972 was slightly less than in the previous year (*see* paragraph 6.22). In some industries, such as paper and printing and, particularly, transport equipment, there was a fall in domestic demand, whilst the decline in the value of exports to Uganda affected a wide range of manufacturing industries (*see* Table 3.20). In other sectors, the availability of inputs was a constraint. In the meat processing industry, this was the result of veterinary regulations which held back supplies to slaughter plants, but in some industries it may have been partly caused by import restrictions leading to shortages of raw materials.

6.3. While production during the year was somewhat below expectations, development of new manufacturing capacity proceeded briskly, and this should be reflected in the level of future output. In almost every category of manufacturing, new plants have been built or existing ones expanded. Details of total investment in the sector during 1972 are shown in Tables 1.11 and 1.12.

6.4. Several of the new projects involved the participation of the Industrial and Commercial Development Corporation (ICDC) and the Development Finance Company of Kenya, both of which are public bodies which have been involved for several years in the development of new activities in the manufacturing sector. They do this primarily through equity investment. Through a subsidiary company, the ICDC is also involved in the development of industrial estates for small manufacturers. Two such estates have already been built, in Nairobi and Nakuru. Both of these are to be expanded, and new ones constructed at Mombasa and Kisumu. In the rural areas, the Government has initiated a rural industrial development programme which is part of a general programme of rural development. Small and medium scale industries will be established, with a view to utilizing local resources. In 1971/72, four rural industrial development centres were set up, at Nyeri, Machakos, Kakamega and Embu, and more are planned.

*Provisional

6.5. An important recent development in public sector promotion of industrialization is the setting up of the Industrial Development Bank. The bank will participate in new projects either through equity holdings or by providing loan capital.

6.6. *Food Processing.*—Production in this group of industries rose by 7 per cent in 1972, a rate of growth similar to that in the previous year. However, output either declined or remained stationary in several of the major food processing activities. Sugar production declined by 27 per cent, which was the major factor holding back growth of production in food processing as a whole. There was also a drop, of nearly 5 per cent, in the volume of coffee milled. Meat processing showed almost no change. Further details on the farm production of these items are set out in Chapter 4.

6.7. Meat processing was held back by limited supplies, resulting from veterinary restrictions on the movement of cattle and a significant decline in the number of pigs produced for slaughter. However, some important developments which will affect the future of the industry have taken place recently. For the first time, frozen beef from Kenya has been exported to European markets, from which it was previously excluded on veterinary grounds. It is expected that these shipments will lead to the opening up of a major market for Kenya beef. The Kenya Meat Commission is undertaking substantial capacity expansion, including the construction of a new freezing block at Athi River to supply these new markets. Much of the planned expansion at Athi River has already been completed at a cost of nearly K£1 million. Expansion of the facilities at Mombasa is also planned. The financial position of the Commission has continued to improve and is now strong enough to support this programme.

6.8. In dairy processing, output during the year increased by nearly 18 per cent. However, the rapid influx of milk into the creameries created marketing difficulties. Expansion of capacity of Kenya Co-operative Creameries continued during the year. A new creamery was built at Sotik for K£362,000. Another and much larger plant is to be built at Kitale at a cost of K£600,000 to manufacture milk powder for local and export markets. It is also intended to build two more plants to produce ultra heat treated milk and cheese.

6.9. As shown below, wheat flour production (a major part of the grain milling industry) continued to drop: —

<i>Year</i>	<i>'000 metric tons</i>
1968	75.0
1969	89.2
1970	127.9
1971	120.4
1972	116.5

However, domestic consumption of flour continued to rise and this additional demand was met by reducing exports. Although wheat flour production fell, more maize was milled and this helped to maintain the level of production in the industry.

6.10. Development of new facilities for the handling and processing of maize continued. A 20,000 metric ton silo at Nakuru, costing K£350,000, is nearing completion and will supply maize directly to a mill nearby. A K£125,000 factory to manufacture cornflakes for the East African market is under construction and another factory, which will produce maize starch and glucose syrup, is to be built at Eldoret for K£850,000. These two factories will absorb 14,500 metric tons of maize per annum. Other developments in grain milling include another rice mill at Sagana, costing K£200,000, to expand available capacity for the processing of paddy from the Mwea Irrigation Scheme. Bakery production will receive further impetus from the construction of a K£400,000 modern bakery at Kiganjo, to supply northern Kenya with bread.

6.11. Output in the fruit and vegetable canning industries increased by nearly 8 per cent, mainly as a result of an expansion in pineapple processing. A new factory to process high quality passion fruit products was opened at Thika. Canning capacity will be augmented by the building of a K£ 100,000 factory for canning beans and processing groundnuts.

6.12. Sugar production fell drastically during the year: —

<i>Year</i>	<i>'000 metric tons</i>
1968	81.4
1969	115.1
1970	125.3
1971	124.3
1972	90.2

However, consumption continued to rise and substantial imports were necessary to meet requirements. The decline was a direct result of the fall in deliveries of cane to the factories (*see* Chapter 4), which was related both to the overall fall in sugar-cane production and to the probable diversion of a larger proportion of cane to jaggery factories. Future production is expected to grow as a result of rising cane supplies and the installation of additional processing capacity. A new mill at Mumias is nearing completion and a major project for increasing sugar-cane production around existing mills is under way.

6.13. A sharp growth in chocolate and sugar confectionery production during 1972 followed completion of a new factory to manufacture cocoa products. Other notable developments in food processing expected to take place this year include the construction of plants to process cashew nuts and to manufacture animal feeds, instant coffee and tea.

6.14. *Beverages and Tobacco*.—Production of beverages and tobacco continued to rise rapidly, increasing by 14 per cent during 1972. Details of the output of individual items are set out in Table 6.2.

Table 6.2
PRODUCTION OF BEVERAGES AND TOBACCO, 1966-1972

	Spirits	Beer	Mineral waters	Cigarettes and cigars
	<i>litres</i>	<i>'000 litres</i>	<i>'000 litres</i>	<i>Metric tons</i>
1966	139,120	50,088	19,602	1,816
1967	137,997	48,839	21,075	1,788
1968	164,760	60,001	22,748	1,764
1969	169,965	64,757	27,876	1,814
1970	180,441	79,533	31,429	2,081
1971	200,116	93,538	36,532	2,593
1972	278,496	104,835	38,610	2,717

Production of beer went up 12 per cent and that of mineral waters by 6 per cent. Output of spirits rose particularly sharply, by 39 per cent. The construction of a new plant to manufacture soft drinks has significantly expanded capacity in this industry. A major programme of expansion of brewery capacity is continuing in Nairobi and Mombasa. A new development in this group is represented by a proposal to build a K£3.3 million plant at Naro Moru to manufacture potable alcohol and bakers' yeast. Almost the entire output of this plant will be destined for export markets. The production of cigarettes and tobacco reached 2,717 metric tons during 1972.

6.15. *Textiles*.—Overall production in this sector rose by nearly 16 per cent. However, there was wide variation in the performance of its individual components. The bulk of the growth was in cordage and spinning and weaving (over 23 per cent in each). Production of cordage had recovered completely from the slump of 1970, and exceeded the high level of production attained in 1968. Significant future increases in production are expected from new plant capacity now being built. This includes a hessian factory at Ruiru to manufacture wall coverings and sisal floor mats, and another at Thika.

6.16. In spinning and weaving, diversification of products continued during the year, and several of the factories concerned introduced new machinery for this purpose, to reinforce the recent trend towards the manufacture of higher quality products, which would help to strengthen the competitive position of Kenya's textile industry. A major addition to capacity for high quality products will be the completion of the K£4.8 million mill being built at Eldoret. This factory will be able to produce over 14 million square metres of cloth annually. A new factory to manufacture sewing thread was completed during the year.

6.17. *Footwear and Clothing and Made-up Textiles.* After the major growth observed in 1971, activity in this group slowed down and showed only a modest increase of 2.5 per cent in 1972. This deceleration was caused by a fall in exports of footwear together with reduced growth in tent manufacturing. It would seem that the clothing industry was not able to take full advantage of the restrictions on imports introduced early in the year, partly because of the high level of stocks then available. Capacity in the industry will be augmented by the completion later this year of a K£280,000 garment factory at Thika to manufacture men's and children's clothing.

6.18. *Wood Products and Furniture; Paper and Printing.*—Developments in some of these industries are discussed in Chapter 5.

6.19. *Leather and Leather Products.*—This group recorded an extremely high rate of growth of 37 per cent in 1972.

6.20. *Rubber and Rubber Products.*—This industry was transformed in 1972, the first full year of operation of a tyre manufacturing plant. This was responsible for the 21 per cent growth in output shown in Table 6.1. However, initial production at the plant has encountered some teething troubles, which have affected the quality of tyres manufactured. Efforts are now being made to correct these by the installation of more testing equipment. The range of tyres being manufactured is also to be enlarged to include new sizes and new types, such as steel cord radial truck tyres.

6.21. *Chemicals.*—Chemical production showed a moderate growth of 4 per cent, to which all branches of the industry except soap manufacturing contributed. Production increases of 13 and 29 per cent were recorded for paints and pyrethrum extraction, the former because of rising demand, especially from the construction industry, and the latter following substantial growth in the production of pyrethrum flowers (*see* Chapter 4). In both industries new investment is continuing. Available capacity for pyrethrum processing will double when the new K£1.5 million extraction factory at Nakuru is completed. Production in the wattle extraction industry rose by 17 per cent but that of miscellaneous chemicals increased by only 1 per cent, although a rising output of pharmaceuticals may be expected, following the opening late last year of a K£500,000 factory.

Table 6.3 PRODUCTION OF PAINTS AND DISTEMPERS, 1968-1972 '000 litres

	Paints	Distempers	
1968	2,416	722	
1969	2,976	654	
1970	3,198	529	
1971	3,701	553	
1972	4,166	583	

6.22. *Petroleum*.—The series below shows a slight decline in the throughput of crude oil: —

<i>Year</i>	<i>Million litres</i>
1968	2,255
1969	2,510
1970	2,508
1971	2,966
1972	2,925

This was due to interruption of production for a fortnight for essential cleaning. Because domestic demand for petroleum products continued to rise, imports became necessary. However, as shown in Table 6.4, exports were maintained at the same level as in 1971. The capacity of the refinery is currently being increased by 60 per cent and a significant proportion of the K£12.5 million investment has already been made.

Table 6.4 EXPORTS OF PETROLEUM PRODUCTS, 1967-1972 *K£'000*

	1967	1968	1969	1970	1971	1972*
To Tanzania	1,517	1,411	1,398	1,260	1,404	1,546

To Other Countries	7,170	6,111	7,623	8,176	8,869	8,942
TOTAL EXPORTS	11,240	10,521	12,513	13,776	15,059	15,347

*Provisional

6.23. *Non-metallic Minerals*.—The major component of this group is cement, the production of which changed little during 1972. Total exports to Uganda and Tanzania declined while overseas sales increased. Domestic consumption grew slightly. Major expansion of capacity at both of the cement factories is being planned. Another factory, to manufacture asbestos and cement products, is being built adjacent to the Bamburi cement factory.

6.24. *Metal Products*.—The main sources of the growth of 15 per cent in this industry were production from the three steel rolling mills that have been built in recent years and the inauguration of output from two new factories making locks and miscellaneous hand tools and implements. Manufacture of steel welding electrodes was also initiated during the year.

6.25. *Electrical Machinery*.—The most significant development was the completion of a small factory to build radios and record players. Gradual diversification of this plant into electrical household equipment manufacture is foreseen.

CEMENT PRODUCTION AND UTILIZATION, 1965-1972

Table 6.5

'000 metric tons

Electricity

6.26. Total sales of electricity by type of consumer are detailed in Table 6.6, which shows a growth in 1972 of over 11 per cent. Approximately half the growth was the result of an increase in the number of consumers. As in 1971, the most significant increase in sales occurred in industrial consumption, which went up by 13 per cent, the bulk of this growth being accounted for by new industries. Household consumption recorded an increase of 8 per cent which was mainly due to new consumers, whose number rose by nearly 7 per cent. The rise in sales of off-peak power for water heating and pumping was 12 per cent; there was a smaller growth in the sales of street lighting power.

SALES OF ELECTRICITY BY TYPE OF USER, 1968-1972

Table 6.6

'000kWh

	1968	1969	1970	1971	1972*

*Provisional.

6.27. Figures of local generation and imports of electricity are shown in Table 6.7. Supplies of domestically generated electricity in 1971 had been affected by the low level of the Tana River, resulting in additional imports from Uganda. During 1972, the situation improved considerably—domestic generation increased by 19 per cent and imports fell by 3.5 per cent.

GENERATION, IMPORTS AND CONSUMPTION OF ELECTRICITY, 1968-1972

*Provisional.

6.28. During 1972, electricity supplies were made available for the first time in Kajiado and Garissa. At the end of the year, a line to supply farms on Naivasha North Shore was under construction. This line is expected to be connected during the first half of 1973. Plans were also being prepared to supply a large number of consumers situated along the route of the Embu-Chogoria line. In order to save on generating costs, and also to provide for future demand growth, a line from Kiganjo to Nanyuki was constructed and the Nanyuki power station shut down. A further extension to Meru will serve a similar purpose, and will enable the farms in the Timau area to enjoy electricity supply facilities in 1973.

6.29. Schemes in hand at the end of 1972 included an extension from Kakamega to Webuye via Musaga. Early in 1974, when the new "stepdown" on the transmission line is completed at Musaga, the line will be used to feed into the system from Musaga to Kakamega. The Musaga "stepdown" will provide additional capacity and improve the reliability of the existing network in the Nyanza and Western area. Economies in generating cost can then be obtained by shutting down the Homa Bay power station following the construction of an extension from Sotik to Kisii, linking the Homa Bay-Kisii system to the main network. It will also supply at least one tea factory along the route.

6.30. Work is also in progress to extend supplies in Bungoma in Western Province and the Kangema area in Central Province. The largest extensions for individual consumers are to the Nairobi City Council's mid-Chania water scheme and the Kinangoni mining project at the Coast.

6.31. Work has been proceeding on the K£16 million Kamburu hydro-electric project, which will be capable of supplying 200 megawatts when completed. The first 30 megawatt set is to be in operation by the end of the first quarter of 1974. In 1973, the capacity of the network will be increased by the addition of a 13.5 megawatt industrial gas turbine generating set, now being installed in Nairobi. Investigations into the feasibility of generating electricity from geothermal steam have been continuing. But, even if this source can be successfully utilized, it will not be in commercial operation before 1978. A total of K£780,000 has been committed so far in the geothermal power exploration at Olkaria and Eburu (both near Naivasha) and the Lake Hannington area.

Building and Construction

6.32. *Building*—The value of all private building work carried out in the main towns, including new buildings constructed and extensions to existing buildings, is set out in Table 6.8. Although the provisional figures for 1972 show a drop, they are expected to be slightly higher when final data, particularly for Nairobi, have been received. Notable growth took place in some of the other towns, especially Mombasa and Nakuru.

THE VALUE OF ALL PRIVATE BUILDING WORK COMPLETED IN MAIN TOWNS, 1967-1972

Table 6.8 K£million

	Nairobi	Mombasa	Nakuru	Kisumu	Kitale	Eldoret	Thika	Others	Total

6.33. Completions of new private buildings in the main towns are shown separately in Table 6.9. Although the total number of private new residential buildings completed in 1972 was only slightly higher than in 1971, their value increased by nearly 17 per cent, showing that the emphasis in private house-building was in higher cost structures.

6.34. Private and public building plans approved by Nairobi City Council during 1972 are shown in Table 6.10. These were valued at K£16.6 million, an increase of 13 per cent over 1971. Over 75 per cent in value terms of total approvals in 1972 was accounted for by private buildings. The value of private non-residential plans approved increased from K£5.6 million to K£6.1 million, while that of residential buildings fell from K£7.0 million to K£6.5 million. The public sector presented a total of 180 plans for approval, of which 115 were for residential buildings. Their total value was over K£4 million, more than twice as high as in 1971.

6.35. A significant feature of the building and construction industry in the last few years has been the rise in construction costs. An indication of these is the prices paid by Ministry of Works for some major inputs, shown in Table 6.11. It is expected that in 1973 the price of stone will fall whilst those of sand, cement and, particularly, skilled labour will rise.

COST OF BUILDING MATERIALS AND LABOUR, 1966, 1970-1973

*Provisional

6.36. Road Construction.—Road development expenditure in 1972 was approximately K£16.6 million. Out of this total, approximately K£4.9 million was spent on road maintenance and repair, the allocation of which is shown by province in Table 6.12. This allocation is normally related to the size of the road network in each province.

M.O.W. EXPENDITURE ON ROAD MAINTENANCE AND REPAIR, 1972/73

TOTAL	603,667	1,073,857	1,004,553	1,103,459	1,135,684

6.37. The bulk of road development is undertaken by the Ministry of Works through contractors. During 1972, the various road projects completed were worth K£12.8 million, covering a total of 426 kilometres of bitumen and 846 kilometres of gravel road. The most significant of these projects were the 125 kilometre Athi River-Namanga road (costing K£1.4 million), the 30 kilometre Thika-Kahawa dual-carriageway (K£1.9 million) and the Njoro-Mau Summit-Enangiperi road of 91 kilometres (K£1.5 million).

TOTAL	426	8,770	846	4,029

6.38. Twelve new projects were started in 1972, covering 433 kilometres of bitumen and 36 kilometres of gravel road, at an estimated cost of K£13.4 million. The four most important, worth a total of K£8.4 million, were roads to serve the tea areas of the south Aberdares (167 kilometres), and roads connecting Yala-Busia (72 kilometres), Eldoret-Nyeru-Chipborio (40 kilometres) and Uplands-Longonot (30 kilometres).

6.39. Work on 15 road development projects started prior to 1972, and valued at K£12.5 million, is still progressing according to schedule. These projects cover a total of 519 kilometres, of which 323 kilometres are bitumen. The most significant bitumen roads are Eldoret-Timboroa (61 kilometres), Dandora-Kangundo (58 kilometres), Jamji-Sotik (35 kilometres), Nakuru-Eldama Ravine (90.53 kilometres), and Dagoretti-Ndenderu (27 kilometres).

TOTAL	323	9,550	196	2,900

*Cost included under Bitumen.

6.40. The Ministry of Works also undertakes some road development projects using labour drawn from its own resources and the National Youth Service, with some assistance from private consultants. During 1972, road development projects under this scheme cost approximately K£2.5 million, covering 854 kilometres. They included the Nairobi-Addis Ababa road project, for which 80 kilometres of earth-works and 71 kilometres of gravel road were constructed at an approximate cost of K£1 million.

CHAPTER 7—TOURISM

Although the increase in tourist visits and hotel nights spent by tourists in 1972 fell below growth rates in previous years, the overall progress of the industry towards Development Plan targets was satisfactory. The total number of visits to Kenya rose by 7 per cent, but days stayed by visitors went up by 28 per cent, mainly the result of a large increase in visits by persons staying more than a month in Kenya. Total hotel beds occupied rose by 13 per cent, slightly more slowly than in the previous year, while bed capacity increased by 18 per cent so that occupancy rates fell. Although total hotel occupancy was slightly below the Plan target, hotel capacity had, by early 1973, exceeded the target for 1974. If the projections of hotel occupancy for 1974 are to be realized, total hotel nights stayed will have to increase by more than 15 per cent per annum in 1973 and 1974.

BED OCCUPANCY PLANNED AND ACHIEVED, 1970 AND 1972

Table 7.1 '000 Bed-Nights

	DEVELOPMENT PLAN PROJECTIONS		ACTUAL BEDS OCCUPIED	
	1970	1972	1970	1972
E.A. Residents	853	958	755	757
Foreign Residents	1,064	1,557	1,148	1,718
TOTAL	1,917	2,515	1,903	2,475

7.2. The provisional tourist expenditure estimate of K£26.5 million showed a rise of 11 per cent over the revised 1971 total of K£23.9 million*. This increase was less rapid than the growth in the number of visitor days, probably because there is a tendency for expenditure to fall with increased length of visit, and so average expenditure per visitor day declined from Sh. 125 to Sh. 109. Achievement of the 1974 target of K£37 million for earnings from tourism will now require an increase of rather more than the projected figure of 15 per cent per annum. The tourist expenditure estimate represents total foreign exchange outlays made on goods and services provided by the private sector and includes an element of "prepayments" made to travel agents abroad in the first place but eventually remittable to Kenya. The overall expenditure figure does not include the earnings of East African Airways and other Kenya-based carriers. Such receipts are included in the balance of payments under "Transportation" while tourist receipts are recorded as credits under "Foreign Travel" (see Table 1.13).

*The 1972 figure is, however, based on more detailed information than were previous years', and is therefore not strictly comparable.

Visits and Visitor Days

7.3. There has been a compound annual increase of 14 per cent in the number of arrivals and departures since comprehensive statistics were first collected in 1968. This increase is slightly below the 15 per cent annual target set in the Development Plan largely because of the slowing down of visits in 1972, when the increases in arrivals and departures were 8 per cent and 7 per cent respectively. Since figures of arrivals include some visitors who eventually settle in Kenya, departures are felt to represent a more realistic basis for the assessment of changes.

7.4. The quarterly growth pattern of visits in 1972 shows, compared with the corresponding periods of 1971, an increase of 33 per cent in departures during the first three months, with small changes in the next two quarters and a drop of 10 per cent in the last three months. The large increase in visits in the first quarter was mainly attributable to the OAU All-Africa Trade Fair in February/March. However, the Fair occurred at the height of the normal tourist season so that, to some extent, visitors to the Fair may have substituted for other types of tourists who were unable to make bookings during the period. Another factor which affected the number of visits in the latter part of the year was the reaction to events in Uganda—there was a decline in the number of visits from residents of all areas except Africa and a substantial number of tour bookings were cancelled.

*Kenya Citizens resident outside Kenya were not included in tourist statistics until 1971

7.5. Data on visitors' country of residence, which have now been available for two years (Table 7.4), show overall increases for 1972 only in the totals for holiday visitors from North America and Europe. The figures emphasize the contrast between the classifications by country of nationality and by country of residence, the latter being a much more accurate indicator of Kenya's tourist generating areas. By residence classification, 40 per cent of visitors to Kenya in 1972 came from Africa, 37 per cent from Europe and 15 per cent from the United States. Corresponding figures by nationality were 24 per cent, 49 per cent and 17 per cent. The nationality groupings thus underestimate the importance of Africa as an area with potential for Kenya's tourist industry.

7.6. Some information on visitors' method of travel is shown in Table 7.5. There was a substantial decline in the number of visits by sea. Travel by air and road increased by 11 per cent. The decline in the number of journeys by rail and lake was the result of a fall in tourist traffic from Uganda. (Cruise passengers who come ashore at Mombasa are not included in these visitor statistics).

VISITOR DEPARTURES BY METHOD OF TRAVEL, 1968-1972

7.7. The total number of visitor days spent in Kenya rose by 28 per cent in 1972, much more rapidly than the number of visits (Tables 7.6 and 7.7). The former is in general a better indicator of tourist activity than the number of visits made, since it avoids the problem of distinguishing between *visits* and *visitors*. It is notable that the large increase in the number of visitor days was almost entirely confined to one type of visitor, the result of an increase of 27 per cent in the number of visitors staying over a month and a 28 per cent increase in their average length of stay. Visitors staying less than one month increased by only 6 per cent and there was little change in their average length of stay. While the longer staying visitors make only 6 per cent of total visits, they account for over one-third of total visitor days, so that this total is especially sensitive to changes in their number and length of stay. Increases in the average lengths of stay of these longer staying visitors are apparent in all quarters of 1972, while for the shorter staying visitors, they are evident mainly in the last two quarters. A possible explanation is that some

visitors spent a slightly longer time in Kenya, having cut short their intended visits to other East African countries. This would also have the effect of reducing total recorded visits, which include inter-East African travel.

7.8. The seasonal fluctuations evident in earlier years were more pronounced in 1972 (Table 7.3) since growth rates slackened after the first quarter. In future it is hoped to even out these fluctuations by encouraging, among other things, off-peak pricing and conference tourism in the low season months. Substantial conference facilities are already available in Kenya and the Kenyatta Conference Centre, which will open in mid-1973 and accommodate its first large conference in September when the IMF/World Bank Group meet, is expected to be a major factor in the promotion of conference tourism in Kenya.

Hotel Occupancy and Capacity

7.9. Hotel occupancy statistics for the last eight years are summarized in Table 7.8 and given in greater detail in Tables 7.9 to 7.12. Hotel bed occupancy by non-Kenya residents increased less rapidly than in previous years, because of a decline in the number of beds occupied by residents of Uganda and Tanzania and a deceleration in the rate of growth of bed occupancy by non-East African residents—20 per cent compared with 25 per cent in 1971. Kenya residents stayed 7 per cent more nights in hotels than in the previous year.

HOTEL BED OCCUPANCY, 1965, 1969-1972					
Table 7.8					'000 Bed-Nights
	1965	1969	1970	1971	1972

TOTAL BEDS AVAILABLE ..	2,130.9	3,251.6	3,882.6	4,214.3	4,979.6
Bed Occupancy Rate (per cent)	47.0	50.2	49.0	52.0	49.7

*Persons staying one month or more in one hotel—includes some block bookings for aircrew.

7.10. Hotel capacity expanded more rapidly than in 1971, and occupancy rates for beds declined from 52 to 50 per cent and for rooms from 64 to 60 per cent. While beds occupied (Table 7.11) in the Coast Beach area rose faster (at 22 per cent) than in any other tourist zone except the Northern Game Area, capacity grew by 42 per cent, leading to the lowest occupancy rates at the beach since 1967. The rapid increase in capacity in response to expected changes in demand, especially at the Coast and in Nairobi, is an indication of

investors' expectations of future growth of the industry. By its very nature, the tourist industry is not amenable to precise forecasts of demand trends so that at any given moment a situation of excess capacity is as likely as one of capacity shortage. What is required now is more vigorous efforts to promote tourism in order to utilize the new capacity being developed.

7.11. The situation in game lodges is somewhat different. As shown in Table 7.12, lodge occupancy rates have risen substantially, to a level above the average for the whole country. However, investors' response to expanding demand is delayed by the long gestation periods involved in negotiations for site leases in wildlife areas and by other administrative procedures.

Visits to Wildlife Areas and Other Attractions

7.12. Table 7.13 shows the first comprehensive data on the total number of visits (including season ticket holders and non-paying visitors) to the various national parks. Visits by non-residents rose by 30 per cent between 1971 and 1972, and by residents by 19 per cent. Nairobi and Tsavo West National Parks attracted more than half of all visitors. A relatively high proportion of total visits to the Aberdare National Park, with its specialized game lodges, was made by non-residents, while Lake Nakuru had the highest percentage of visits by school children. Table 7.14 shows the longer series covering paid visits to National Parks. Unfortunately no comparable statistics of visitors to the three County Council Game Reserves are available, although estimates prepared for planning exercises indicate that Amboseli had around 74,000 and the Masai Mara Game Reserve about 30,000 paying visitors in 1971. The 28 per cent compound annual increase since 1965 in the number of nights spent in the lodges in the game reserves is an indication of the growing popularity of these areas. Information on the activities of the Game Department and the National Parks can be found in the Wildlife Section of Chapter 5.

7.13. The number of visitors to museums, the Snake Park and other sites is shown in Table 7.15. The National Museum provides an opportunity for visitors to Nairobi to learn about Kenya's history, culture and natural resources through various permanent exhibits. Plans are under way to extend the activities of the museum by developing the Institute for African Pre-history, which will absorb the present Centre for Prehistory and Palaeontology and provide physical and technical facilities for research into the prehistory of Africa. The Institute is expected to cost about K£195,000. A survey of buildings that have special historical significance for Kenya may also be carried out in the near future by the Museum Trustees of Kenya. Also under consideration is a Park of Physical Principles that will have exhibits illustrating and explaining various scientific principles. Research into the origins of man has continued, with important discoveries being made on the eastern shores of Lake Rudolf.

The Development of Tourism

7.14. Direct Government participation in the tourist industry is through the Kenya Tourist Development Corporation (KTDC) which to-date has invested some K£2.1 million. Nearly half of this is in equity investment and the rest in loans for new hotel development, modernization and extensions and the establishment of tourism enterprises by Kenya citizens. In 1972, there was a sharp increase in funds made available for small loans (not exceeding K£30,000) to new Kenyan entrepreneurs to set up tour companies, hotels, curio shops, etc. Four major projects in which the KTDC is an investor were completed in 1972 and another three in which the Corporation has varying degrees of interest will be completed by mid-1973. "Bomas of Kenya", which provides performances of traditional dancing, opened for business early in 1973. The KTDC plans to form a Hotel Management Company to provide management services for hotels in which it is the major shareholder and also to assist Kenyans to own and manage small hotels of up to 50 beds. This project is expected to open up new circuits where demand is not yet sufficient to justify large-scale commercial developments and will also encourage wider geographical distribution of the benefits from tourism.

7.15. The Government also plays a vital role in the provision of the infrastructure needed by the tourist industry. Several road projects, most notably access roads to beach development areas in Watamu, Malindi and Diani, were completed in 1972. A World Bank Loan of K£12.5 million for the Sabaki River Water Pipeline project (to serve Malindi and Watamu) has been approved although the scheme will not be in operation until 1976 at the earliest. Decisions have also been taken to go ahead with improvements and extensions to Nairobi and Mombasa airports (*see* Chapter 8). A Hotel Training Centre is to be constructed in Nairobi at a cost of K£1.5 million. When operational in 1975, it will replace the present Hotel Training School at the Kenya Polytechnic and provide comprehensive training facilities for 500 students. A part of the cost will be covered through the 2 per cent Catering Training Levy introduced under the 1971 Hotels and Restaurants Act. Official publicity for Kenya tourism, through four overseas tourist offices, participation in various trade exhibitions and the provision of promotional materials, has been stepped up in the last few years. A sum of K£320,000 was allocated for tourism promotion in the financial year 1972-73, a slight increase over the allocation for the previous year.

7.16. Late in 1972 it was announced that the Government intended to ensure that the bulk of tourist trades (including tour operators, tour agencies, and retail curio dealers) had 51 per cent Kenyan ownership within two years, by appropriate use of licensing legislation. Significant moves in this direction affecting tourist road transport have already been made. It was also stated that work permits for several tourist occupations would be granted to non-Kenyans only in exceptional circumstances. Smooth implementation of these measures will require intensified complementary training and other assistance programmes.

CHAPTER 8—TRANSPORT AND COMMUNICATIONS

Activity in the transport and communications industries, as measured by total receipts, rose by only 5 per cent in 1972, the slowest increase for several years. In the public sector, which is composed largely of the East African Corporations, growth was less than three per cent, while private sector activity (which accounts for less than a third of the total) increased by nearly 10 per cent, after having fallen by 3 per cent in 1971.

8.2. Road transport and communications were the only industries which recorded significant growth in receipts in 1972, of 11 and 40 per cent respectively. The increase in road transport activity occurred entirely in the private sector. Railway receipts fell by 7 per cent, and those of air transport by 5 per cent as a result of declining public sector activity. Some of the factors affecting these developments are discussed in the following sections.

Road Transport

8.3. Some indication of the expansion in total road transport activity in 1972 is given by the figures of commercial receipts and of consumption of petroleum products used in transport (Tables 8.2 and 8.3). Petrol consumption increased by 10 million litres (4 per cent) and light diesel consumption by 22 million litres (9 per cent), compared with 1971 totals, although there was no change in the consumption of heavy diesel fuel.

8.4. Registrations of new vehicles are shown in Table 8.4. The 1972 total was 16 per cent lower than in 1971. The biggest drop, 36 per cent, was in new buses registered while lorries showed a drop of 27 per cent. Imports of such vehicles fell substantially in 1972—see Table 3.7.

8.5. Table 8.5 shows the number of licences issued for vehicles on hire in the years 1967-1972. The 1972 figures show a slight drop, which may be due to fewer vehicles being bought for this purpose during the year. Also, meetings by the Transport Licensing Board were held in the second half of the year, and consequently fewer of the approved applications may have led to the immediate purchase of vehicles. Of the 3,447 licences issued to passenger vehicle operators, 2,653 were given to Africans and 794 to non-Africans. In the case of "B" Licences, 2,265 licences were issued to Africans and 939 to non-Africans.

8.6. The only public sector enterprise in road transport is the Kenatco Transport Company, which is now wholly owned by the Kenya Government. Kenatco's growth in the six years since its establishment has been rapid, as shown by the public road transport receipts given in Table 8.1, although total receipts have fallen since 1970. Its haulage services in Zambia have expanded vastly since 1969 and currently 130 heavy-duty vehicles are plying the routes

*Estimated

between Nairobi, Mombasa and several towns in Zambia. This fleet may soon be expanded to 200 vehicles to cope with Zambia's increased transport requirements as a result of the closure of the Zambia-Rhodesia border. However, the uncertain duration of this trade means there is some risk in the heavy expenditure involved.

8.7. In Kenya, the company serves Nairobi, Mombasa, Garissa, Nanyuki, Nakuru, Kisumu and Turi with a fleet of 60 large vehicles and 70 cars. In Uganda, there are plans to extend services from Kampala to Kabale and through to Kigali in Rwanda. In Tanzania, Arusha, Moshi, Dar-es-Salaam, Iringa and Mbeya receive Kenatco services. Plans are under way for the extension of services to Lubumbashi in Zaire via Ndola, and also for increasing the taxi fleet in Nairobi to cater for the major conferences to be held in 1973. About 70 new cars will be purchased to meet this demand.

8.8. During the last two years the company has made a profit on its operations and has been able to meet some of its financial commitments. However, owing to the heavy losses brought forward from previous years, financial assistance from the Government is still required.

Railways

8.9. Provisional figures of total railway receipts for 1972 show an overall fall of nearly 7 per cent, continuing the decline which began in 1971. Within the total, receipts from passenger traffic rose by 5 per cent, while freight receipts showed a decline of 7 per cent. This fall may have been related to a decrease in freight carried to Uganda following the disruption of the distribution sector there in the second half of 1972. But it certainly also reflected continued competition from road hauliers, which has increased following the improvement of trunk roads, and difficulties hitherto encountered by the railways in adapting their tariff structure to the new situation. Proposals aimed at enabling the railways to tackle this problem are at present under consideration by the E.A. Communications Council.

8.10. Development work during 1972 included the new K£1.1 million sorting yard at Changamwe, which is scheduled for completion in 1974. Work has also begun on additional crossing stations between Mombasa and Nairobi and the welding of rail-joints on this section was continued. The whole route will eventually be continuous-welded except through stations and on sharp curves.

8.11. Installation of a modern "line-clear" signalling system between Nairobi and Nakuru has almost been completed, but cannot be brought into use until associated track re-arrangements at stations are effected. Most of the 70 diesel locomotives on order were delivered in 1972. The heaviest and most powerful (fifteen 92 Class 2,500 h.p. diesel-electrics) are all working on the Kenya-Uganda main line. An order for 350 high-sided wagons was placed in 1972 and delivery to East Africa will begin in May, 1973.

8.12. During 1973, a new industrial area goods shed at Nairobi will be erected and a new railway transit shed costing K£200,000 will be constructed at Kilindini.

8.13. Shipping services run by the Railways Corporation will be improved by the renewal of the engines of the Lake Victoria oil tanker *Nyangumi* at Kisumu, and the tug *Sesse* will be converted to diesel propulsion.

Harbours and Shipping

8.14. The tonnage of freight handled at Mombasa harbour in 1972 is shown in Table 8.6. There was a slight drop of 2 per cent in the overall quantity handled. Most of the decline was caused by the fall in the volume of dry cargo landed, since landings and loadings of bulk liquids increased very slightly.

8.15. Development of new berths at the harbour continued, and it is expected that berths 16 and 17 will be in full operation next year. As the demand for expanded and improved harbour facilities continues to grow, the Government has commissioned a feasibility study for a second port. This exercise is now under way. Mombasa harbour has not yet reached its full capacity utilization and the more extensive use of containerization and other forms of unitization will enable throughput to be increased more rapidly than with conventional handling methods.

8.16. Much of the shipping to and from Mombasa operates under Conference Agreements, providing regular scheduled services at fixed rates. Recent changes in these rates included a 10 per cent rise in November, 1972 for all cargo destined for Europe, and a 12 per cent increase in March, 1973 in the rate for cargo to Australia.

*Provisional

8.17. The Eastern Africa National Shipping Line (EANS�), a member of the East African Conference Lines, was incorporated in Tanzania in 1966. The Governments of Kenya, Tanzania, Uganda and Zambia each provided one-sixth of the capital, the remaining one-third being held by Southern Line Limited. The EANS� operates four ships, namely, m.v. *Harambee*, m.v. *Uganda*, m.v. *Ujamaa* and m.v. *Mulungushi*. At first these ships, and those chartered by the company, sailed only between Mombasa and ports in Europe, but in 1971 a shipping route to the Far East was opened. Earnings have more than trebled since 1967, but the company shows losses on its operations because of debt servicing commitments on loans for the ships.

Civil Aviation

8.18. *East African Airways Corporation*.—Although, in general, air transport operations in Kenya have shown steady growth, East African Airways has found itself in financial difficulties. By the end of 1971, the airline had an unappropriated loss of K£4.1 million and it is expected that the 1972 deficit may be even larger as a result of management and technical problems. In order to improve its financial position, the airline has cancelled uneconomic routes such as London to New York, Bombay to Hongkong and Addis Ababa to London. Under an agreement negotiated with an overseas airline, experts have been obtained to advise East African Airways on various aspects of finance and management.

8.19. *Commercial Air Traffic*.—Commercial traffic at Nairobi Airport, shown in Table 8.7, continued to show an upward trend. The total number of passengers handled increased by 8 per cent over 1971. The cargo handled at the airport rose by 23 per cent. Traffic at Mombasa and Wilson airports is shown in Tables 8.8 and 8.9. Passengers handled at Mombasa showed a

*Provisional

modest rise, while the estimated figure for cargo handled shows a drop of 19 per cent over 1971. Movements of light charter aircraft are centred on Wilson Airport, and there was a substantial increase in passenger traffic in 1972. At Malindi, a total of 14,765 passengers arrived at the airport and 7,200 metric tons of cargo were handled. The corresponding figures for Kisumu were 2,398 passenger arrivals and 7,024 metric tons of cargo handled.

8.20. With prospects of continuing rapid growth in air traffic, the major airports will receive substantial funds for improving their facilities.

8.21. *Nairobi Airport*.—Development to provide for long-term expansion commenced last year and most of the consultant's work and land acquisition was completed. The facilities in the first stage development include: —

- (i) a new passenger terminal capable of processing a total of approximately 2,000 arriving and departing passengers per hour;
- (ii) a new 50 metre high control block and tower;
- (iii) a new parallel taxiway, passenger and freight apron, access roads and car parks;
- (iv) a freight shed, state pavilion, police station, engineering services and other ancillary facilities.

The whole project is expected to cost just over K£16 million.

8.22. *Other Airports*.—Negotiations for major improvements to Mombasa airport have taken place and work will begin before July, 1973. The project will bring the airport up to international standards, capable of accepting the current generation of long-range jet aircraft. It will be fully equipped to handle "Jumbo" jets and will, in particular, meet the requirements of tour operators wishing to operate flights direct from Europe to Mombasa. The major construction works will include a 3,350 metre runway, taxiways, wide apron, drainage, new terminal building capable of handling a total of 1,000 departing and arriving passengers per hour, freight building, fire station, control block and new access road. The total construction cost is estimated at K£8 million.

8.23. At Malindi, K£118,000 was spent on extending and strengthening the runway and apron, and at Wilson airport improvements to runway and taxiway lighting, construction of a new terminal building and other minor works were also carried out in 1972 at a cost of K£6,000.

Posts and Telecommunications

8.24. Table 8.10 shows the main indicators of the development of postal and telecommunications services in Kenya. Twenty-five new post offices were opened in 1972, bringing the total to 433. This was an increase of 6 per cent over 1971 and the number of offices has grown by 30 per cent since 1967. An additional 4,082 post office private boxes were installed in 1972, bringing the total to 58,175, a rise of 45 per cent over the 1967 total. Of these, 55,962 were in use at the end of 1972. There were also 719 private bags rented at the end of the year. In 1972, 7 per cent fewer parcels and 3 per cent more registered and insured items were handled than in 1971. The progress made in the provision of telephone services over the year can be seen from the same table. There was a net increase of 4,265 telephone exchange connections in 1972, bringing the total telephone exchange connections to 43,775 at the end of the year.

POSTAL AND TELECOMMUNICATION SERVICES, 1968-1972

Table 8.10

8.25. As part of the integrated East African telex network, two automatic telex exchanges were opened in October, 1972 at Nairobi and Mombasa, with capacities of 650 and 270 lines respectively, thus providing international Telex Subscriber Dialling to and from most overseas countries. There were 270 telex subscribers at the end of 1972.

Broadcasting

8.26. This is a very important means of mass communication in Kenya since a large number of people (especially in the rural areas) cannot read newspapers and so, for many of them, radio has considerable significance. The number of new radios bought in 1972 went up by 13 per cent but purchases of new television sets decreased slightly, by 4 per cent (Table 8.11). These purchases brought the total stock in the country to about 1,050,000 radios and 34,000 television sets at the end of 1972.

NEW RADIOS AND T. V. SETS SOLD AND LICENSED, 1971-72

Table 8.11

	Numbers	
	1971	1972
Radios	74,824	84,650
Television Sets	2,782	2,658

8.27. A number of development projects were completed in 1972. Among these were the acquisition of new mobile link equipment for on-the-spot coverage for television programmes; new information offices at Homa Bay, Kericho and Meru; a building for the Outside Broadcasting Unit (radio and television); and a transport centre. In addition, a "systems" survey, which sought the most effective and economical way of extending mass communication media services in Kenya, was completed. Improvements to Broadcasting House in Nairobi included a new set of four television recording cameras.

8.28. A total of 1,674 television programmes were presented in 1972, and of these 65 per cent were locally produced—a positive response to the audience survey carried out in 1970, which showed that most people prefer and appreciate locally produced programmes. (A major constraint is still the shortage of experienced local producers). A number of films were shot in rural areas. Radio programmes also had a high local content, particularly focussed on farming, Harambee projects and other activities in the provinces. Outside Broadcast programmes were produced from various towns, and much effort was put into recording programmes from remoter areas.

8.29. A modern micro-wave backbone network will be completed during 1973, carrying 960 channels and extending from Kampala to Mombasa, and then to Dar-es-Salaam and Dodoma. This is a central part of the Telecommunications Development Programme. The extent of development in international telecommunications was emphasized when, in September, 1972, the Mount Longonot satellite tracking station brought live pictures of the Olympic Games in Munich to Kenya's television viewers.

CHAPTER 9—EMPLOYMENT, EARNINGS, MANPOWER AND CONSUMER PRICES

The statistical data available on employment in the various sectors of the economy differ in coverage and timing. Although the bulk of the data in this chapter refer to the "modern" sector (i.e. all urban establishments, large-scale farms, other large enterprises in the rural areas, and the public sector), it is possible from other information available to build up a national picture of wage employment.

TOTAL WAGE EMPLOYMENT IN THE ECONOMY, 1970 AND 1971

Table 9.1

	1970	1971*	PER CENT IN TOTAL	
	000's	000's	1970	1971*
The "Modern" Sector	644.5	679.7	60.6	60.9
Small-holdings	329.9	342.3	31.0	30.6
Rural non-agricultural activities	90.0	95.0	8.4	8.5
TOTAL	1,064.4	1,117.0	100.0	100.0

*Provisional

9.2. This was attempted in last year's *Survey* and the estimate arrived at for 1971 is shown in Table 9.1. Unfortunately, actual survey data for 1972 on employment in small-holder agriculture and in small-scale rural non-agricultural activities are not available. However, it is likely that there was significant growth in wage employment in these activities. The primary reason for this assumption is that, as shown in Chapter 4, there was a major increase in agricultural production. This was conspicuously so, as far as small-holdings are concerned, in such labour intensive crops as tea, pyrethrum and dairy products. There is evidence to suggest that, in some parts of the country, both large and small farmers found it difficult to secure all the labour they needed for harvesting operations, suggesting that there was at least a temporary constraint on the supply side, created by the growth in other employment outlets.

9.3. The level of rural non-agricultural activities is closely related to farm incomes, so that, when the latter rise, rural non-agricultural activities and employment grow. The multiplier effect of rising agricultural incomes would be felt on top of what appears to be a secular upward trend in the growth of rural non-agricultural services, in response to the growing sophistication of life and general economic development in the rural areas, which in turn partly results from government efforts to promote such development through the provision of training facilities, credit, and improvements of infrastructure. On the basis of these factors, it is not unreasonable to assume

a substantial growth in wage employment in the rural areas. The aggregate number in 1972 of wage employees comparable to the figure shown for 1971 in Table 9.1 might well have approached 1.2 million.

9.4. This does not make full allowance for employment in so-called "informal" activities in the urban areas. A detailed study of employment carried out by a mission from the International Labour Office last year suggested that such "informal" activities are a good deal more important than is usually assumed, and provide employment for about 100,000 persons, including both wage earners and the self-employed.

9.5. The visit of the ILO mission, and its subsequent report and recommendations, attracted a good deal of attention and comment in the country. The mission's proposals for enlarging employment are set in the broad perspective of economic policies which would promote growth and increase incomes as well as multiply job opportunities. The Government has given detailed consideration to its recommendations and intends to publish a sessional paper on them.

9.6. The rest of the discussion of employment and earnings in this chapter is devoted to the results of the annual June enumeration of employees in the "modern" sector, which is defined in the first paragraph of this chapter.

Employment

9.7. In 1972 the amount of wage employment in the "modern" sector increased by 4.4 per cent, or very nearly 30,000 persons, as shown in Table 9.2. However, only one-third of this growth was in the private sector. This is perhaps not surprising, as employment in this sector has been growing only slowly for several years and had to be deliberately accelerated in 1970 and 1971 through the Tripartite Agreement, under which all employers of ten or more persons agreed to augment their labour force by 10 per cent. To some extent, this pre-empted what might have been "normal" growth in 1971 and 1972. Another notable feature of employment in the private sector last year was the fact that its growth was confined almost entirely to agriculture.

9.8. A more detailed breakdown of employment in the private sector by economic activity is set out in Table 9.3. It reveals a very uneven pattern. While the bulk of the growth in numbers took place in agriculture, the increase was higher in percentage terms in building and construction and transport and communications. Growth in manufacturing was only just over 1 per cent. Although insignificant in absolute terms, mining and quarrying suffered the largest rate of decline. The rise in numbers of employees in building and construction and transport and communications more than offset the fall in employment in commerce and services. Within commerce, the fall in employment particularly affected wholesalers, banks and property companies, all areas of activity influenced by the import and credit restrictions discussed in Chapters 2 and 3. Although activity in some mining enterprises has been increasing, in others it has declined quite sharply.

9.9. The labour force in the various components of the public sector is shown in Table 9.4. Employment by the Government rose by 8 per cent, from 164,300 to 177,000, while that of its para-statal organizations grew even faster, by 23 per cent, although in absolute numbers the increase was only 4,300. This rapid growth is a reflection of the Government's growing direct involvement in various economic activities. After remaining stagnant for two years, following the take-over by the Government of several important local authority functions, employment by local authorities began to move forward in 1972. There was little change in the Community's employment within Kenya, and its share in the total declined slightly. The Government is by far the most important single employer within the public sector, with over 64 per cent of the total.

9.10. The distribution of employment by economic activity in the private and public sectors together is shown in Table 9.5. The directions of movements in the various economic activities within the private and public sectors were not the same in all cases. While public employment in agriculture and forestry rose, it fell in building and construction and in transport, storage and communications, both of which had shown an increase in the private sector. On the other hand, public sector employment rose in mining and quarrying and services. The consequences of these movements on the relative significance of each activity within the public and private sector are also illustrated in Table 9.5.

9.11. The whole of the increase in employment in 1972 was among Africans. In fact, as shown in Table 9.6, employment of Asians and Europeans declined and these now make up 5.3 per cent of total wage employment in the modern sector. Overall employment of Europeans and Asians fell by 3,400, from 40,900 to 37,500. As in the three previous years, the bulk of the decline was among Asians rather than Europeans. The number of women employed continues to rise, and was nearly 15 per cent of the total in 1972, having grown by 6.5 per cent, 2 percentage points faster than the growth in total employment.

*Provisional.

9.12. The nationality distribution of employment continues to show a pronounced decline among non-citizen Europeans and Asians, particularly the latter. At the same time, the absolute number of citizens in employment among these two races has tended to increase gradually. The proportion of Asian citizens among all Asian wage employees rose from being half in 1971 to nearly 60 per cent in 1972. Increasing concentration of Asian and European citizens and non-citizens appears to be taking place in services.

Earnings

9.13. Total earnings in the modern sector in 1972 grew by 10.5 per cent, compared with the growth in employment of 4.4 per cent. Earnings have tended to rise considerably faster than employment for several years. In 1971, the growth of earnings in the public sector had been strongly influenced by the impact of the award recommended by the Ndegwa Commission. Although the bulk of the payments under this award were made in 1971, some were paid in 1972. Earnings in the public sector were also affected by a wage award to teachers in 1972 and by increased employment in para-statal bodies. As a result, the rate of growth in the public sector wage bill was of the same magnitude as for the private sector.

9.14. Although private employment in several economic activities fell, this had no effect on their wage bill, except in mining and quarrying. Agricultural employment rose significantly, but the level of earnings went up faster, by nearly 23 per cent. This was perhaps because farmers had to offer higher wages in order to attract the labour they required.

9.15. As shown in Table 9.11, a large part of the increase in public sector earnings originated within para-statal bodies, employment in which increased by over 23 per cent. However, this rise in numbers was primarily in middle and high level occupations, which are relatively well remunerated, so that the overall earnings of employees in these bodies rose quite sharply. Among East African Community bodies, the fall in earnings of the employees of the E.A. Posts and Telecommunications Corporation was probably related to the transfer of its headquarters from Nairobi to Kampala.

9.16 Percentage changes in employment and earnings as well as in the absolute level of average earnings are shown in Tables 9.12 and 9.13. Average earnings per employee rose by 6 per cent, taking the public and private sectors together. A significant proportion of this increase was contributed by the rise of 17 per cent in average earnings within private agriculture. The next highest

risers were in commerce and services, despite falling employment in both these sectors. The slow growth of average earnings in building and construction can probably be attributed to the fact that the rise in employment in this group was primarily among unskilled labourers, who can be drawn from the relatively large pool of unemployed in the urban areas.

Manpower and Kenyanization

9.17. In 1972, a survey of high and middle level manpower was undertaken. This revealed that there were approximately 100,000 persons in this category, of whom 59 per cent are in the private sector and 41 per cent in the public sector. The number of citizens and non-citizens in each of the major occupational categories is shown in Table 9.14.

9.18. Three out of every four persons in this category of manpower were citizens compared with three out of five in 1967, when the last such survey was carried out. However, there remain wide variations in the level of Kenyanization within the different manpower categories. Two-thirds of all professional jobs are still occupied by non-citizens, as are a third of managerial posts. The primary reason for this is that such occupations require a relatively long period of education and training. During the last few years, the facilities required to provide such education and training have been developed and the pace of Kenyanization in these occupations is expected to speed up considerably. Kenyanization within the public sector has progressed further than in the private—the percentage of citizens in the high and middle level occupations in the public sector early in 1972 was 83 per cent, compared with 68 per cent in the private sector.

KENYANISATION OF HIGH AND MIDDLE LEVEL OCCUPATIONS, 1972

Skilled Office and Clerical Occupations	25,625	100	21,179	83	4,446	17
Skilled Manual Occupations	21,431	100	17,834	83	3,597	17
TOTAL	99,821	100	74,261	74	25,560	26

9.19. In 1972, the Government enlarged the number of economic sectors and occupations in which non-citizen employees are required to have work permits. In addition to a large number of individual establishments, the entire building and printing industries, as well as the wholesale and retail trades, were brought within the scope of the regulations requiring work permits for non-citizen personnel. Nearly 10,000 permits were issued during the year. Of course, this is less than the number of non-citizens in wage employment, since a number of industries and occupations are not yet affected by the work permit system.

9.20. The issue of work permits is co-ordinated between the Department of Immigration and the Kenyanization of Personnel Bureau. The Bureau also registers for employment school-leavers who do not continue into further education or training, and who are unable to secure employment through other channels. The number so registered in 1972 was about 5,000, and the number placed in jobs 3,300. Placements in high and middle level occupations of persons other than school-leavers were smaller—250. This is because such posts tend to be filled in other ways (e.g. direct recruitment by employers in the private sector and among para-statal bodies or, in the public service, through the Public Service Commission, the Local Government Commission and the Teachers Service Commission).

9.21. A National Industrial Training Council was established in 1971, under the Industrial Training Act, to encourage and assist industries to establish and develop training schemes for skilled manpower. Under these arrangements, Tripartite Training Committees (made up of representatives of Government, employers and employees) are now operating in the building and civil engineering, sugar, motor engineering, transport and printing and publishing industries. A levy is imposed on employers in these industries and its proceeds used to reimburse costs of training to those employers who operate training programmes. In 1972, for example, the training committee for the building and civil engineering industry reimbursed training costs of K£20,000.

9.22. Other schemes to promote Kenyanization include the National Industrial Vocational Training and Trade Testing Scheme. This was set up in order to establish standards of skills by which workers can be graded through a system of trade testing, to create apprenticeship programmes in various trades and to lay down standards for training, both formal and informal, for persons entering industrial employment in the craft trades. The number of candidates who passed trade tests is set out in Table 9.15. The drop in 1972 is due to the fact that there was a shift of emphasis during the year from trade testing to training.

TRADE TEST PASSES, 1970-1972

Table 9.15

	1970			1971			197&		
	Grade I	Grade II	Grade III	Grade I	Grade II	Grade III	Grade I	Grade II	Grade III

TOTAL	320	823	3,699	258	702	2,110	201	696	2, 070

9.23. There are 44 apprenticeship programmes in operation under the scheme. The number of apprentices and indentured learner contracts registered in 1972 was 333 compared with a total of 829 during the previous four years. The apprenticeship programme covered the metal, mechanical, automotive, electrical, wood-working, building, printing, textile and agricultural trades.

9.24. A National Industrial and Vocational Training Centre is already in operation in Nairobi. A second centre is expected to start in Kisumu shortly and planning is proceeding for a third which will be located at Mombasa.

Consumer Prices

9.25. The indices of consumer prices for low and middle income wage earners rose substantially during 1971, mainly as a result of new fiscal measures introduced in that year. The rate of growth in these prices slowed down in 1972, as shown in Table 9.16.

PERCENTAGE CHANGES IN CONSUMER PRICES, DECEMBER, 1967 TO APRIL, 1973

Table 9.16

	Dec. 68 to Dec. 69	Dec. 69 to Dec. 70	Dec. 70 to Dec. 71	Dec. 71 to Dec. 72	Dec. 72 to April 73	Dec. 67 to April 73
Nairobi Lower Income Index	-	1.6	7.5	3.0	1.3	14.8
Nairobi Middle Income Index	1.1	2.4	6.3	4.1	2.1	17.8

9.26. The cost of living index of low income wage earners rose by 4.4 per cent and that for middle income earners by 6.3 per cent during the sixteen months since December, 1971. (Details of the various items which make up these indices are set out in Tables 9.17 and 9.18.) The cost of living of high income persons, however, increased rather more rapidly, by 7 per cent.

CHAPTER 10—PUBLIC FINANCE IN THE ECONOMY

This chapter does not discuss the entire public sector but only the "government" part of it, which includes the Kenya Government, local authorities and the General Fund Services of the East African Community (but not its "enterprise" functions). It contains an analysis of the various aspects of the budgets of the three levels of government mentioned above and details of their revenue and expenditure are presented in the following sections.

Kenya Government*

10.2. The out-turn of Government revenue and expenditure in 1972/73 and previous years is set out in Table 10.1. For 1972/73, the figures in Table 10.1 have been adjusted to take account of what is likely to be some K£8 million of under-expenditure on development account. However, this adjustment has not been made in the subsequent tables, which are derived entirely from the published estimates and subsequent supplementary estimates. The reason for this is that, at the time of going to press, it is not clear what categories of expenditure will fall short of the amounts budgeted. In Table 10.1, an attempt has been made to show a complete picture of the manner in which the difference between expenditure and revenue from normal sources is financed.

10.3. In 1972/73, the total deficit has increased sharply, to K£61 million. 58 per cent above the deficit in 1971/72. However, as in 1971/72, the whole of this increase is attributable to the rising level of development expenditure, which has increased nearly nine-fold during the eight years since 1964/65. Total expenditure in 1972/73 is expected to reach K£204.2 million. Of this, K£140.6 million goes into recurrent outlays and K£63.7 million, 31 per cent of the total, into development. In 1971/72, development expenditure was K£24 million lower, and comprised only 24 per cent of the total budget. However, because recurrent revenue grew rather slowly in 1972/73, the surplus on recurrent account, which is normally channelled into the development budget, declined to K£2.2 million. This has meant that virtually the whole of development expenditure had to be financed from internal and external borrowing, which have contributed more or less equal amounts.

* It should be noted that the figures in this chapter differ from those which appear in the published Appropriation Accounts. The principal reasons for this are the elimination of double-counting due to transfers between the recurrent and development accounts and the showing of revenue and expenditure gross of revenue collection costs and appropriations-in-aid.

*This table details Kenya Government's deficit and its financing. The details in this table are set out in such a way as to isolate distortions caused by items of "investment" expenditure. These items consist of expenditures on purchase of equity in "commercial" enterprises and loans and advances to various sectors of the economy. Similarly, recurrent revenue, as shown in this table, excludes grants and long-term and short-term domestic financing. Basic aggregates in this table can be reconciled as follows:—

1. Recurrent revenue as shown in this table plus external loans and grants and long-term and net short-term domestic borrowing, on recurrent account and equal recurrent revenue as shown in Table 10.10.
2. Recurrent expenditure plus development expenditure and investment expenditure as shown in this table equal total expenditure shown in Tables 10.3 and 10.8. except for 1972/73, for reasons stated in para.10.2.
3. Development project earnings plus external loans and grants and long-term and short term domestic borrowing on development account equal development revenue shown in Table 10.14.

**Included in development expenditure.

+Provisional.

10.4. The growth of total expenditure by functional activities is specified in Table 10.2 and the value of such expenditures in Table 10.3. The pattern of increases in the current financial year is very different from that in the previous year. The most notable feature is the three-fold rise in the rate of growth of outlays on economic and community services, which in 1972/73 account for 35 per cent of total expenditure. To a considerable extent, this growth derives from the sharp increase in development expenditures apparent in Table 10.1.

THE GROWTH OF EXPENDITURE BY FUNCTIONAL ACTIVITIES, 1964/65 TO 1972/73 *

*Provisional

10.5. Within "economic and community services", the largest absolute rise is in expenditure on transport and roads, which went up by K£6.4 million to K£30.6 million. Of this amount, K£19.7 million is estimated to have been incurred on new road development, and the bulk of it was allocated as follows:—

	<i>K£ million</i>
Trunk Roads	6.0
Primary Roads	5.0
Secondary Roads	1.9
Minor and Unclassified Roads	2.8

A large part of the rest, nearly K£4 million, has gone into the development of Nairobi and Mombasa airports.

10.6. Another notable feature of Table 10.3 is the continued growth of outlays on agricultural and veterinary services, which rose by 26 per cent in 1971/72, and went up by another 38 per cent (K£5.5 million) in 1972/73. In the years prior to 1969/70, a large part of the relatively high agricultural and veterinary expenditures had been of a transfer nature, going into the purchase of land for settlement purposes. In the last two years, however, only a small proportion of expenditure has been devoted to settlement, so that the growth has gone into new development and extension services.

10.7. The "other" category in economic and community services includes some important activities which benefitted from the growth of one-third in such expenditure. Of the total, K£8 million is development expenditure on commerce and industry, including K£4.6 million in the form of loans to the Industrial and Commercial Development Corporation (ICDC) and other enterprises. The ICDC uses these resources for equity investment, to develop industrial estates and to make loans to small businessmen and industrialists. Of the balance of the amount in this category, K£2.5 million went to water supplies, mainly in the rural areas, and K£1.2 million for land adjudication and registration. The progress of these services is discussed in Chapters 4 and 5.

10.8. Social services is the second largest major category of expenditure and in 1972/73 claimed 30 per cent of total outlays. Expenditure increased by nearly 14 per cent over 1971/72, and the whole of this growth has gone into education, which accounts for two-thirds of the total expenditure on social services. Over 8 per cent of educational outlays have been incurred on development account, to expand facilities for secondary education, teacher training and other vocational institutions. Total expenditures on health and other community services show little change in the current financial year.

10.9. In contrast to its growth of 31 per cent in 1971/72, expenditure on "general services" has risen only 8 per cent in 1972/73. (The sharp rise in 1971/72 was due to the major salary award recommended by the Ndegwa Commission.) These services include law and order, defence, administration and revenue collection. Of the total, K£7 million is development expenditure on buildings, which include the Kenyatta Conference Centre in Nairobi, new headquarters for the Provincial Administration, prisons and buildings for the police and armed forces. The decline in outlays on "law and order" is attributable to the tapering off in development expenditure on police and prisons buildings.

10.10. The other major functional category of expenditure in Table 10.3 is "financial obligations". These include public debt payments, pensions and gratuities, and transfers to local authorities. Expenditure on financial obligations rose by K£2 million and almost all of this growth went into transfers to local authorities, mainly to help finance water and sewerage projects.

10.11. Details of public debt are shown in Tables 10.4 to 10.7. The overall level of public debt in 1972 increased from K£170.1 million to K£194.3 million, by 14 per cent. More than half of this growth was in internal debt, which has been rising much faster than external debt during the last decade—nearly five-fold since 1962, compared with 85 per cent for external debt. The bulk of the internal debt is funded and raised on the local market through issues of government stock. However, in 1971 and 1972, the Government also used local sources to raise significant amounts of unfunded debt. But the vast bulk of the latter remains external, as shown in Table 10.6, in which sources of unfunded debt are detailed. Half of the growth in such external debt in 1972 was in the form of loans from international organizations.

10.12. An analysis of public funded debt by holders on the local register is shown in Table 10.7. The most important single source is the National Social Security Fund and its significance continues to grow, accounting in 1972 for 35 per cent of the total book value of all public funded debt on the local register. Other major sources of such finance are commercial banks and insurance and other companies but their share in the total declined from 29 per cent in 1971 to 27 per cent last year.

10.13. An economic analysis of Government expenditure is detailed in Table 10.8*. However, this only includes information up to 1971/72, since the details required to do this analysis for the current financial year are not available. Capital expenditure grew by only 3 per cent, K£1.5 million, and its share in the total declined from 35 per cent in 1970/71 to 31 per cent, although gross capital formation increased by K£7.6 million. The 22 per cent growth of recurrent expenditure was primarily due to a major pay award for civil servants—outlays on wages and salaries increased by nearly K£15 million.

10.14. The functional and economic analysis of government expenditure in 1971/72 is brought together in a cross-tabulation in Table 10.9.

10.15. Revenue receipts on recurrent account are detailed in Table 10.10. The estimates for 1972/73 show an increase of nearly 5 per cent (K£6.9 million), which derives primarily from taxation and short-term borrowing. Although less than 1 per cent of the total, external sources have nearly doubled due to a single grant.

10.16. Details of taxation receipts are shown in Tables 10.11 to 10.13. The growth of the revenue from direct taxation slowed down in 1972/73 after rising for several years. Of the K£4 million increase in 1972/73, K£2.9 million is represented by rising income tax and the rest is from graduated personal tax (GPT). However, this latter source will disappear entirely following the recent announcement by the Government that GPT is to be abolished. A new sales tax is to be introduced on imports and domestically manufactured goods—the tax on imports is already operating and domestically manufactured goods are to be brought within its scope in the next financial year. This will significantly increase the importance of indirect taxation as a source of revenue.

* In this table, the recurrent and capital expenditure categories are not synonymous with the "recurrent" and "development" expenditure as published in the Appropriation Accounts because they are defined on the basis of economic rather than budgetary categories.

10.17. In 1972/73 the revenue from all indirect taxation showed no change. In fact, as shown in Table 10.12, import duty collections fell substantially.* This was a direct consequence of the fall in imports, discussed in Chapter 3. Excise revenue shows little change. However, receipts from "taxes and licences n.e.s." have more than doubled. The figures in this category reflect the impact of taxes introduced in 1971/72 on hotel accommodation, traditional liquor and consumption of beer and tobacco. A small proportion of the increase is also accounted for by the sales tax on imports, implemented recently.

*The figures in Table 10.12 are on a calendar year basis and are not directly comparable with those in Table 10.11.

10.18. The sources of revenue for development expenditure are shown in Table 10.14. The near-doubling of revenue in 1972/73 made possible the sharp growth in development expenditure already noted. Revenue from external sources is expected to rise from K£12.5 million to about K£28 million, thus raising the share of external sources to half. Internally raised development revenue derives primarily from local market issues, and finance from this source is expected to grow from K£15.6 million in 1971/72 to K£22 million in 1972/73. Another important source of funds in the current year was a loan of K£5 million from the Central Bank. As indicated earlier in this chapter, transfers from the recurrent to development account are only K£2.2 million compared with K£17.4 million in 1971/72 and K£21.4 million in 1970/71. The difference between revenue as shown in Table 10.14 and expenditure is met through domestic short-term borrowing.

Local Authorities

10.19. Total expenditure by local authorities is shown in Table 10.15. The figures indicate a growth of over 21 per cent. However, it should be noted that expenditures for 1972 are based on the published estimates of the local authorities and not on actual outlays. Past experience suggests that expenditures are usually below the published estimates. The growth of K£4.5 million in 1972 was evenly distributed between municipalities and county councils. The bulk of the increase in municipal expenditures was in Nairobi. However, growth is also apparent in all the smaller urban centres, although Mombasa shows a slight drop.

10.20. There were increases in all categories of expenditure, as illustrated in Table 10.16. Allocations to trading activities went up by the largest amount, and, as shown in Table 10.17, this was primarily caused by a large rise in expenditure on water undertakings, which could be attributed almost entirely to Nairobi City Council's Chania River water development scheme (*see* Chapter 5). The large expenditure involved in the construction of this scheme is a major factor in the growth of capital expenditure, shown in Table 10.18.

10.21. Figures of municipal revenue are set out in Table 10.19. It is likely that actual revenues were lower than anticipated in the published estimates. For 1971 and 1972, a major source of revenue for municipalities has been loans. This was particularly true for Nairobi City Council, which is financing several large capital projects through borrowings. Nairobi City Council and Mombasa Municipality also rely heavily on GPT revenue, which will be abolished at the end of 1973, and is to be replaced by a system of grants from the Central Government.

10.22. The activities of the county councils declined sharply after the Government took over their functions in education, health and secondary roads. This transfer of activities sharply reduced county council expenditure as well as revenue, a large part of which used to be in the form of government grants to finance the services taken over. However, it seems that county councils' activities are once again moving forward, as shown in Tables 10.20 to 10.22.

East African Community—General Fund Services

10.23 The functional analysis of the expenditure incurred in Kenya for the General Fund Services of the East African Community is shown in Table 10.23. (This excludes the outlays of the self-contained transport and communications corporations of the Community.) In 1971/72, after several years of stagnation, General Fund Services expenditure rose by 35 per cent. Most of this increase was in revenue collection and financial control services (i.e. the activities of the East African Customs and Excise Department and the East African Income Tax Department). However, outlays on economic services also rose. The economic analysis of General Fund Services expenditures, shown in Table 10.24, suggests that a major part of this growth went into wages and salaries.

CHAPTER 11—EDUCATION

Enrolments in Kenya's schools increased rather more rapidly in 1972 than in the previous year, with rises of 10 per cent and 15 per cent being recorded in primary and secondary schools, compared with 7 per cent and 11 per cent respectively in 1971. (It should be noted here that the enrolment figures are for March in the reporting year, and thus understate the average level of enrolments for the year as a whole). The number of schools increased by 6 per cent to a total of 7,606, accompanied by a faster rise of almost 9 per cent in the total number of teachers. Kenyanization of this profession is virtually complete in primary schools and is proceeding steadily in secondary education. Although the 20 per cent increase in the number of Kenya students at the University of Nairobi was much slower than the record 43 per cent growth in 1971/72, the total number of undergraduate Kenya students attending Universities in East Africa rose faster, by 25 per cent.

11.2. Total expenditure by the Ministry of Education in recent years is detailed in Table 11.1, and reflects the rapid increase in the provision of educational services in this period. The discontinuity in government expenditure on primary education reflects the take-over of responsibility for county council schools in 1970. Municipal authorities spent K£3.1 million

on education in 1972, virtually the same as in 1971. These totals are not included in Table 11.1, which also excludes expenditure by private assisted and unaided schools (particularly significant in secondary education), and development expenditure on primary schools, usually financed on a self-help basis.

Primary Education

11.3. A rise of 10 per cent in primary school enrolments was recorded in 1972, compared with 7 per cent in 1971. The process of absorbing assisted and unaided schools into the maintained group was continued, although at a slower rate than in the previous year, and there was a large increase in the number of boarding school places, mainly serving areas with scattered populations.

PRIMARY SCHOOL ENROLMENTS BY CATEGORY, 1971-1972

Boarders	5,429	8,659	14,088	11,204	11,200	22,404

11.4. The number of pupils entering the school system in Standard 1 showed a particularly large increase (16 per cent) and probably reflected improved economic conditions in agricultural and pastoral areas as they recovered from the drought conditions of 1971. This brought the average enrolment in Standard 1 classes to 40 pupils, the Development Plan target for primary schools; however, this target will only be attained in the higher standards if rather lower drop-out rates occur than in recent years.

11.5. The overall average size of primary classes remained at 34 pupils in 1972. The tendency for class sizes to rise in Standards 6 and 7, after being at a minimum in Standard 5, as pupils repeat their studies, is clearly shown in Table 11.4. The practice of allowing pupils to repeat is officially discouraged, and hence there is a strong incentive for schools to under-report its extent. The figures in Table 11.5 are therefore believed substantially to understate the true position—if some schools entirely exclude details of repeaters when reporting their enrolments, then of course all primary enrolment figures and related statistics will be inaccurate. Repeating stems essentially from the high pressure on secondary school places, and.

although there is some evidence to suggest that it performs a useful function in enabling able but relatively young pupils to have a second chance at obtaining a secondary school place, it is recognized as a major problem by the educational authorities.

11.6. Table 11.5 also shows provincial variations in the utilization and provision of primary educational opportunities. The overall percentage of children aged 6-12 who are enrolled in primary schools rose to 70 in 1972, and it appears that the 1974 target of 75 per cent enrolment (implying 192,000 enrolments on present population projections) can be achieved for the country as a whole. However, in four provinces (and, *a fortiori*, many districts) the rates of increase needed to achieve this target are unlikely to occur, not least because even existing facilities are underutilized. This is partly a problem of access, when the area served by a school is large (a difficulty somewhat eased by the provision of boarding schools), and of finding fees, which the fee remission programme is intended to reduce (no primary school fees are paid at all in 10 districts). But it also reflects more fundamental social attitudes about formal education which can only slowly be eroded.

Secondary Education

11.7. Secondary school enrolments rose by 15 per cent in 1972, the increase being more or less equally divided between maintained and unaided schools. In contrast with 1971, when boarding schools absorbed almost all the total increase, day pupils accounted for most of the rise in 1972 enrolments.

11.8. The total number of pupils in assisted schools actually fell slightly, since one school was taken over by the Government as part of the policy of absorbing assisted and unaided institutions. In addition, responsibility for 32 Form 1 classes in unaided schools was assumed by the Government, which is following a procedure of taking over Form 1 in the first year, Form 2 in the second year and so on in selected schools.

+using population estimates from "Kenya Statistical Digest" September, 1972.

11.9. A rather faster rate of increase in Form 1 enrolments was recorded in 1972 than in 1971, with the result that Standard 7 pupils had a slightly better chance of entering secondary schools. There was no overall change in the number of pupils per class, which remained at 35.

11.10. Enrolments in Forms 5 and 6, which prepare pupils for the Higher School Certificate, continued to rise at the planned rate of 20 per cent per annum. Pupils in these forms accounted for 4 per cent of all secondary school enrolments in 1972. There is a slight bias towards science subjects in Forms 5 and 6, and, although it is intended that this emphasis should become stronger in due course, the present structure is likely to be maintained until it is clear that students with scientific training can be easily absorbed in the labour market or in higher education.

11.11. The provincial distribution of secondary school enrolments is set out in Table 11.10, together with information on the percentage of Standard 7 pupils entering Form 1. This latter section of the table should be interpreted with some care, since Nairobi and Mombasa secondary schools in particular serve other areas, but it does show some striking variations. The rise in the percentage of Kenya citizens in secondary schools continued in 1972, when they accounted for 96 per cent of the total (Table 11.11).

11.12. The results of secondary examinations taken in recent years are shown in Table 11.12. The number of school candidates for the K.J.S.E has fallen as more pupils have gone on to take their School Certificate in Form 4, but the number of primary teachers sitting the exam has continued to rise. Candidates for the School Certificate have increased by more than 50 per cent since 1969; the marked change in the ratio of full passes to passes at the lower E.A.C.E. standard from 1971 onwards largely reflects the policy introduced in that year of not awarding full passes to any private (non-school) candidate. Despite a decline in the overall pass rate, the number of successful candidates for the Higher School Certificate has increased by nearly two-thirds since 1969. Apart from being eligible for admission to the Universities, holders of such certificates are also required for training for occupations which need a strong basic education. At lower educational levels also, a significant proportion of successful examination candidates will continue with their education rather than enter the labour market, but it is clear that the number of qualified school-leavers is rising rapidly; many of them will be unable to find wage employment quickly. Consequently the possibility of making secondary curricula more practically orientated, to equip more school leavers for self-employment with, for instance, agricultural and industrial skills, is under consideration.

Pupils per School	239	252	221	242	410	426	125	120	174	171	232	242

Schools

11.13. All provinces had more primary schools in 1972 than in 1971, with North-Eastern Province showing the largest percentage increase and Nairobi the smallest, the overall increase being 285, or 4 per cent. Total secondary schools rose by 140 (17 per cent), as a result of increases of 22 and 11 per cent respectively in unaided and maintained schools. The increase of 45 per cent in the number of unaided schools in Central Province is particularly striking. The size of both primary and secondary schools, measured in terms of pupils enrolled, continued to rise overall, except for a small decline in the size of unaided secondary schools, probably the result of their rapid expansion in number during the year.

Technical and Vocational Education

11.14. Statistical information on activity in this field is incomplete. The figures in Table 11.14 can therefore be taken only as a rough indication of recent trends, as they are not by any means comprehensive. In particular, lower level courses such as those at village polytechnics and farmers training centres are not included, nor in-service courses run by private firms. (Some information on trade test passes is given in Chapter 9.) The decline in enrolments at the Kenya Polytechnic reflects the phasing out of several elementary courses for unskilled students—enrolments for advanced courses have continued to rise. A similar trend is apparent at Mombasa Polytechnic where, however, total enrolments in 1972 showed a small increase over 1971. In technical secondary schools vocational and trade courses have now been phased out and students take wholly technical subjects up to Form 4 level, giving them better qualifications for obtaining employment.

ENROLMENTS IN TECHNICAL AND VOCATIONAL EDUCATION, 1970-1972

Table 11.14

	Numbers		
	1970	1971	1972
Trade Courses and Secondary Trade Courses	2,426	3,051	3,214
Mombasa Polytechnic	883	953	961
Kenya Polytechnic	2,858	2,811	2,650

11.15. The Industrial Training Levy introduced in 1971 has now been extended to include the motor-vehicle and printing, publishing and allied trades, as well as the sugar and building and construction industries initially covered. Firms are entitled to draw back some of the expenses incurred in sponsoring their employees for technical training.

11.16. Government plans for the extension of technical education include the National Industrial and Vocational Training Centre (N.I.V.T.C.) in Kisumu, which will be completed this year, the expansion of the Nairobi

N.I.V.T.C., and the development of a similar institution in Mombasa. The proposed Technical Teachers Training College for Nairobi is awaiting the acquisition of a suitable site.

Teachers

11.17. The total number of teachers in primary and secondary education grew by 9 per cent in 1972, compared with the 18 per cent increase in 1971, and the overall percentage of Kenya citizens in the profession continued to rise. Nearly four-fifths of primary school teachers are professionally qualified and only 1 per cent are non-citizens. In secondary schools 63 per cent of teachers are citizens, the same proportion of the total being professionally qualified.

SCHOOL TEACHERS BY QUALIFICATION AND CITIZENSHIP, 1971 AND 1972

Table 11.15 *Numbers*

TOTAL TEACHERS	52,007	57,190	3,760	3,452	55,767	60,642	93	94

11.18. Despite the increased supply of teachers in 1972, the expansion of enrolments in both primary and secondary education meant that there was virtually no change in either pupil-teacher or teacher-class ratios during the year. There are still 6 districts in Kenya where teacher-class ratios are less than one for primary schools.

11.19. Total enrolments in training courses for primary school teachers rose by only 3 per cent to 7,478 in 1972, the slow growth being largely accounted for by a fall in enrolments for P3 training (i.e. for the lowest grade of primary teacher). The abolition of this intake of school leavers with C.P.E., and the in-service training of existing P3 staff, is part of an overall plan to upgrade the quality of teaching staff which also includes the diversion of school-leavers with School Certificate to the PI teaching

grade rather than secondary school teaching. The number of teacher trainees for secondary schools actually fell by 13 per cent in 1972, the result of a lower intake following overproduction of this grade of teacher. It is intended that ultimately S1 (secondary) teachers will be drawn only from students with Higher School Certificate and further training. There were 250 Kenya students on degree and diploma courses in education at the University of Nairobi in 1972/73, 186 at Kenyatta University College, and 194 at Makerere and Dar es Salaam Universities.

University Education

11.20. The total number of students at the University of Nairobi rose by 12 per cent in 1972/73 compared with the record expansion of 24 per cent the previous year. The number of Kenyans attending under-graduate courses rose by 20 per cent (nearly half of the increase being students in the new Faculty of Education) and there was a 17 per cent rise in post-graduate students. Teaching staff totalled 540 in 1972/73 and recurrent expenditure was K£3.6 million.

11.21. Developments during the academic year included the provision of new teaching facilities in the Faculties of Veterinary Medicine, Architecture, Design and Development, and Agriculture at a cost of over K£1.3 million. A Faculty of Science building costing over K£500,000 will be opened in 1974. Non-teaching projects completed during 1972/73 included four halls of residence for a total of 1,200 students, a Central Catering Unit,

a University swimming pool and the expansion of staff housing. The problem of student accommodation will be further eased by the extension of the Women's Hall of Residence and the hostels at Kenyatta National Hospital and Kabete, but it will re-occur if there is a further increase in enrolments without a corresponding provision for additional student hostels.

11.22. Kenyatta University College enrolled its first undergraduates in 1972/3. Most of the total of 233 students were on degree courses in education but 26 students were studying fine arts and eight home economics. The only non-Kenya students were 13 undergraduates from Uganda.

11.23. The total number of Kenya students at university in East Africa showed a further increase of 20 per cent to a total of 3,781 in 1972/73 (for undergraduates only, the rise was 25 per cent to a total of 3,484). There were 226 Kenya students at Makerere and 293 at Dar es Salaam, while Ugandan and Tanzanian students accounted for 315 and 264 respectively of the total of 790 non-Kenya students enrolled at the University of Nairobi; this total has been falling since 1969/70. Estimates of the number of Kenya students on higher education courses outside East Africa vary widely, but there are around 725 such students holding government-channelled scholarships, and it can be assumed that this figure is likely to be swollen considerably by students who are able to finance themselves or are sponsored from private sources.

Adult Education

11.24. This field covers many aspects of functional education, some of which are under the control of the Adult Education Division of the Ministry of Co-operatives and Social Services. The number of Government aided schools providing national literacy and functional education rose from 832 in 1971 to 945 in 1972. There were also some 500 other centres operating, organized either on a self-help basis or by voluntary organizations. The total number of enrolments in all centres rose from 60,000 in 1971 to about 100,000 in 1972. An additional 45 centres with a total enrolment of 1,125 students were operated under the Experimental Functional Literacy Programme. The Formal Vocational and Technical Education Section of the Division had 2,826 students enrolled in 120 classes, and of these 873 sat for the C.P.E. in 1972. An innovation was the awarding of proficiency certificates in reading, comprehension and arithmetic. During the year, 3,548 such certificates were issued.

11.25. The Institute of Adult Studies at the University of Nairobi functioned on an enlarged scale during 1972. Its six extra-mural centres organized 107 seminars and public meetings, with a total attendance of 9,947. At its evening classes, which last 10 or 20 weeks, 4,343 students were enrolled in 162 classes. The Radio and Correspondence Course Unit had 167 persons enrolled in its K.J.S.E. preparatory courses and 1,152 for the unqualified teachers programme. At the Adult Studies Centre, 25 residential courses of between a week and three months were organized for 719 participants, accounting for a total of over 10,000 student days. Its Headquarters Training and Research Unit ran a one-year diploma course and also offered adult education training to various ministries and teacher training colleges. Together with the Ministry of Finance and Planning, the Unit has also organized seminars at provincial centres aimed at promoting a better understanding of the national Development Plan in order to encourage more local participation in the planning process.

CHAPTER 12—HEALTH, HOUSING AND OTHER SOCIAL SERVICES

Total public expenditure on health and social services continued to rise in 1972, as shown in Tables 12.1 and 12.2. However, the rate of its growth was somewhat slower than in the previous year. Provisional figures of government expenditure on health show a slight rise but it is expected that actual expenditure will be slightly higher than estimated. In 1971/72 there had been a sharp growth in expenditure by the Ministry of Labour on re-equipment of the National Youth Service with new machinery, particularly for road building. This was one of the factors responsible for the substantial growth of total expenditure on social services in that year, but was not repeated in 1972/73. One of the notable features of the current year is the growth in outlays on housing. The housing expenditures of local authorities represent some double-counting of the outlays shown for the Ministry of Housing, because a substantial part of such local authority expenditures consists of funds made available by this Ministry.

CENTRAL GOVERNMENT EXPENDITURE ON SOCIAL SERVICES*, 1968/69-1972/73

*Provisional.

Health, Nutrition and Family Planning

12.2. *National Hospital Insurance Fund.*—Receipts into and benefits paid out of the National Hospital Insurance Fund are set out in Table 12.3. In 1971/72, receipts increased by 8 per cent, while benefits rose by 17 per cent. This had the effect of reducing the difference between the two to K£248,941. As an incentive to encourage voluntary contributions (contributions are compulsory for all employees earning over K£600 per annum), those who make them now enjoy the same benefits as compulsory contributors. The National Hospital Insurance Fund Act was amended in 1972, to the effect that any person who elects to become a contributor cannot opt out.

NATIONAL HOSPITAL INSURANCE FUND, 1968/69-1971/72

1971/72	1,026,576	777,635	248,941

*Includes both compulsory and voluntary contributions.

12.3. *Hospitals and Health Centres.*—The total number of hospital beds and cots is shown by province in Table 12.4. There was a rise of 8 per cent in 1972. During the year, two new hospitals were completed, at Garissa and Busia, with a total of 225 beds. Three other hospitals are under construction at Ol Kalou, Siaya and Mathari (maximum security unit for mental patients). Extensions to existing hospitals were either in progress or completed at Kenyatta National Hospital and the Naivasha, Kangundo, Kakamega, Kiambu, Thomson's Falls, Gatundu, Nandi Hills, Kisii, Kabarnet, Thika and Machakos hospitals.

12.4. Construction of new health centres was started at Mbere, Migori and Vihiga and other centres are planned for Tetu, Kapenguria and Kwale. A survey of rural health services was carried out in 1972 to obtain data for the further development of such services, including the training of medical personnel for the rural areas.

*Excludes costs, which are included in other figures.

12.5. *Medical Personnel.*—The total number of doctors, dentists, pharmacists, nurses and midwives in Kenya is shown in Table 12.5. Caution must be exercised in interpreting the numbers shown, as these include some personnel who may have registered but are no longer active or, in the case of doctors, who may be engaged solely in research. There was an increase in all categories of personnel except pharmacists, whose numbers dropped for the second year in succession.

12.6. The number of medical personnel available is still far below national needs, particularly in rural areas (there is a severe mal-distribution in favour of urban areas). The training of medical personnel thus receives major emphasis in health policy. A major project for the training of para-medical personnel, who are a crucial element in the expansion of rural health services, was started at Nakuru last year to supplement existing training facilities. New training centres for nurses and midwives are also under construction or planned at Kisii, Muranga, Nyeri, Kakamega, Machakos, Mombasa, Homa Bay and Eldoret. Sixteen doctors graduated from the Faculty of Medicine at the University of Nairobi and the enrolment of first year students is now over 100, compared with 73 last year.

12.7. *Public Health*.—Reported cases of some infectious diseases are shown in Table 12.6. In interpreting these figures, it should be noted that not all cases of these diseases are reported, although there has been an improvement in coverage. A significant drop occurred in new cases of leprosy and schistosomiasis.

Table 12.6 REPORTED CASES OF SOME INFECTIOUS DISEASES, 1969-1972 Numbers

12.8. *Family Planning*.—The progress of the National Family Planning Programme since its initiation in 1968 is shown in Tables 12.7 and 12.8. (Prior to 1968 such services were provided mainly in urban areas by voluntary bodies). The number of clinics providing family planning services rose from 250 in 1971 to 282 in 1972 (excluding mobile clinics).

ATTENDANCE AT FAMILY PLANNING CLINICS, 1967-1972

*Data from Nairobi clinics run by the Nairobi City Council and the Family Planning Association.

12.9. The National Family Planning Programme has reached the end of what might be regarded as the initial phase, which was necessary in order to acquire experience and develop basic facilities. The next phase, which will be introduced shortly, will aim at increasing vastly the availability of family planning services, together with the necessary motivational work.

12.10. *Malnutrition*.—Expansion of nutrition services is regarded as an essential component of public health work, and operates through educational and advisory services. The field workers employed under the anti-malnutrition programme now cover nearly all Government hospitals and about 70 health centres. The total number of field staff grew from 82 in 1971 to 137 in 1972.

12.11. Various aspects of the programme are pursued at different institutions—training of field officers (including refresher courses) at Karen College, therapeutic dietetics at Kenyatta National Hospital and field research at the Medical Research Centre, which carries out analysis of locally available foods to develop low cost, high protein diets for children.
housing

12.12. Severe pressure on the supply of housing is the inevitable consequence of rapid growth in population and, in the urban areas, the even faster rate of in-migration. Much of the housing built in the country is in the form of traditional dwellings constructed in rural areas out of local materials; even such housing requires a rising input of purchased goods, partly because of the shortage of freely available traditional materials and partly as a result of the introduction of new materials and concepts of house-building. The estimated value of such dwellings built in 1972 is set out in Table 1.8. In the urban sector, private house building accounts for a substantial proportion of the total number of units built. Details of this and the number and value of residential buildings completed in the main towns, and approvals by Nairobi City Council of plans for new construction, are shown in Chapter 6.

12.13. Increasing resources are being devoted to public housing, which is the overall responsibility of the Ministry of Housing. Its participation in house-building is undertaken through the National Housing Corporation, which makes funds and technical assistance available to local authorities and, where necessary, directly undertakes housing projects. Details of the National Housing Corporation's activities are set out in Table 12.9. The number and value of housing and service plots completed in 1972 were considerably higher, compared with the previous year. Although the bulk of the National Housing Corporation's investments are concentrated in the larger towns and, notably, in Nairobi, the smaller urban centres are receiving increasing attention. Approximately 37 per cent of the housing units completed in 1972 cost less than K£900, compared with 11 per cent in 1971.

NATIONAL HOUSING CORPORATION PROJECTS BY PROVINCE, 1969-1972

Table 12.9

	UNITS COMPLETED				SITE AND SERVICE PLOTS COMPLETED*

TOTAL	1,880	1,290	1,737	2,497	48	169	1,465	2,100

*Site and service plots include all plots in self-help schemes on which services have been completed.

12.14. The bulk of high cost housing tends to be financed privately, by borrowing from banks, insurance companies or building societies. One of the latter, the Housing Finance Company of Kenya, is a public organization. At the end of 1972, its net mortgage loans totalled K£7.3 million, compared with K£4.5 million at the end of 1971.

Other Social Services

12.15. The rest of this chapter is devoted to a brief description of other social services, most of which fall under the Ministry of Labour and the Ministry of Co-operatives and Social Services.

12.16. *Community Development*.—Provisional figures suggest that in 1972 the value of self help projects increased by 13 per cent to reach a total of K£2.9 million. The major categories of projects carried out are shown in Table 12.10. As in previous years, expenditure on schools continued to expand and accounted for most of the increase in the value of projects.

12.17. Contributions from people living in the areas where projects are located rose by 21 per cent in 1972. Of these contributions, K£856,000 was in labour, K£550,000 in materials and K£1,204,000 in cash. The latter accounted for 46 per cent of the total and suggests that rural savings are probably not as low as is often assumed.

*Provisional

12.18. *Youth*.—The Youth Development Programme continued to make progress in project development and organization, and the number of aided projects rose from 30 in 1971 to 53 in 1972. The programme aims at providing young people with skills, understanding and values which encourage them to look for occupations in their rural home areas and to contribute to rural development by building up the economic strength of their own communities. During the year, courses were offered to 2,950 students. In addition, over 10,000 young people are estimated to have attended 152 youth centres in the country.

12.19. *Other Social Welfare Measures*.—These are largely the responsibility of the Social Welfare Division of the Ministry of Co-operatives and Social Services. Actual policies and objectives in this field were outlined in a sessional paper published in 1971. The following services were provided during 1972: —

- (i) Under the Relief of Distress (Public Assistance) Programme over 15,000 persons were helped in Nairobi, Central, Western, Nyanza and North Eastern Provinces.
- (ii) Another Day Care Training Centre was opened at Embu, and the 30 persons trained there brought the strength of qualified staff to 90.
- (iii) A pre-school feeding scheme was launched in collaboration with the National School Feeding Council. In the 12 pilot scheme districts, some 11,000 children were provided with food.
- (iv) Child Welfare Institutions cared for about 17,000 children during the year.

12.20. *National Youth Service*.—At the end of 1972, 3,260 men and women were enrolled in the scheme. This brought to 17,481 the number enlisted into the Service since its inception. During the year, 587 men and 33 women were placed in jobs, which was lower than the comparable figure of 793 in 1971.

12.21. The Service has continued to undertake major construction projects. Its Remote Areas Airstrip Construction Unit has completed seven airstrips at Namanga, Ferguson's Gulf, Amboseli, Samburu, Lolokwe, Nanyuki and Malika. The building of the Addis Ababa-Nairobi and the Thika-Garissa roads continued to make progress during the year. The Service also continued to help in the organization of official functions and public occasions.

12.22. *National Social Security Fund*.—In 1972, the Fund received contributions of K£7.85 million and paid out benefits of K£0.64 million. Total contributions, benefits, net contributions and investment since the Fund was inaugurated in 1966 are shown in Table 12.11. Most of the investments are in Kenya Government stock. During the year, another 293 employers and 100,945 employees were registered with the Fund, bringing net total registration to 22,016 employers and 670,956 employees.

*Annual investments are made up of net contributions plus investment income and bank interest.

CHAPTER 13—THE OUTLOOK FOR 1973

International economic conditions in the current year are generally not unfavourable in terms of their probable impact on growth in developing countries. Overall economic growth in the industrial countries is expected to be 6-7 per cent, somewhat faster than in 1972. With one or two exceptions, commodity prices are expected to remain fairly buoyant and, in some cases, to show further rises. World trade will probably expand by 15-16 per cent in value terms. This will reflect an increase in volume as well as rising prices, for both primary products and manufactured goods. Greater stability in monetary conditions can be expected following the major re-adjustments of currency parities earlier this year.

13.2. In Kenya's own economy, overall economic conditions for 1973 can be viewed with reasonable optimism. Although the long rains have been somewhat patchy so far, it would seem that, except in one or two areas, the amount of rainfall has been sufficient to maintain the volume of agricultural production, although it is unlikely that the rate of growth recorded in 1972 can be sustained. Marketed production of most cash commodities will probably show only a small increase in volume, although tea production should increase considerably. However, farm incomes are expected to rise substantially as a result of favourable commodity prices.

13.3. The prices fetched by Kenya's coffee have continued to rise, and sisal prices have held steady at the high level reached a few months ago. Tea prices, however, are expected to remain weak and the growth in the value of tea production will derive entirely from rising volume. For crops consumed mainly within the domestic market, the relatively high prices paid in 1972 have been carried into the current year, and have even increased slightly for one or two crops, such as wheat. It is expected that the overall effect of these changes in output and prices will lead to a growth in marketed agricultural production of 6-8 per cent.

13.4. In other sectors of the economy, the position is likely to be a mixed one. It is expected that manufacturing production will rise faster than it did last year. Although the level of sales of manufactured products may be adversely affected by the implementation of a sales tax later this year, production will be helped by the easing of import restrictions, which had interrupted the supply of imported inputs during 1972 and in the early part of 1973. The growth in building and construction activity is expected to be at least as high as in 1972; approvals of new building plans by Nairobi City Council in the early months of this year were high, and there is plenty of building and road construction work in the pipeline from last year. Activity in wholesale and retail trade, which had suffered from the impact of import restrictions, should move forward again, and may also be helped by a rising

level of agricultural and industrial production. The positive effects of growing activity in these sectors on transport are, however, likely to be neutralized by sluggishness in tourism, which is expected to remain at more or less the same level as last year.

13.5. Government expenditure is expected to rise by 10 per cent, on both recurrent and development accounts. This will be a slower growth for development expenditure than in 1972/73, but the product of "general government" should again show a significant rise.

13.6. Taking all these factors into account, gross domestic product in 1973 is likely to grow by between 8 and 10 per cent at current prices, and about 5 per cent in real terms.

13.7. The value of exports is expected to rise substantially, almost all of the increase arising from sales of agricultural commodities. Virtually the whole of the additional tea production will be exported; coffee and sisal earnings will reflect high prices; the large maize crop from 1972 plantings is well above domestic requirements and substantial exports of maize are being made. Exports of other agricultural products are also expected to rise slightly. Overall, exports are likely to grow by about K£20 million.

13.8. Imports, however, might increase by a slightly larger amount, KE20-25 million, since the restrictions imposed in 1972 have been eased on most products, and stocks, which had been run down last year, will be replenished.

13.9. The expected developments in overseas trade will have a small adverse effect on the visible balance, but the relative stagnation in invisible earnings will be more than offset by long-term capital inflows, and a small overall balance of payments surplus is likely.
