Summary and Outlook

International Scene The global economy underwent a recession in 2009 due to a deepening of the effects arising from the global financial crisis. The effects were mainly observed in the real and financial sectors. World real Gross Domestic Product (GDP) recorded a negative growth of 0.8 per cent in 2009 compared to 3.0 per cent in 2008.

Most economies in the OECD contracted, with their combined real GDP growth estimated at negative 3.5 per cent in 2009 from 0.6 per cent in 2008. The deepened recession led to adoption of unconventional monetary policy in some OECD countries of ultra-low interest rates in a low inflation environment. This was aimed at promoting investment borrowing to enhance domestic demand and gross fixed capital formation which had declined by 3.7 per cent and 12.1 per cent respectively, in 2009 compared to 2008.

Africa's economic prospects for 2009 were curtailed due to its integration in the global economy through trade, foreign direct investments and remittances. The recession slowed the continent's sustained growth momentum of the past decade to record a slowed real GDP growth of 1.9 per cent in 2009 compared to 5.2 per cent recorded in 2008. This was mainly as a result of reliance on primary commodity exports in the face of a contraction in global demand and consequent declining prices. Private financial inflows to the African continent declined from US\$ 28.5 billion in 2008 to US\$ 21.0 billion in 2009. Countries in the East African Community (EAC) customs union recorded a decline in the combined real GDP growth which slowed to 4.5 per cent in 2009 from 5.8 per cent in 2008.

Domestic Economy The economy posted a real GDP growth of 2.6 per cent in 2009 compared to a revised growth of 1.6 per cent in 2008. The growth was mainly supported by resurgence of activities in the tourism sector and resilience in the building and construction industry. However, a mixture of unfavorable weather and sluggish internal and external demands conspired to restrain growth from attaining its potential during the period under review.

The prospects for 2010 look bright, with economic recovery projected to be more assertive in 2010 not only for the Kenyan economy but also for most of the countries in the world. The Kenyan economy is likely to benefit from sufficient rains experienced during the first four months of the 2010 and forecasted to continue to the next half of 2010. The country is also likely to gain through improved demand for Kenyan exports as well as improved tourists arrivals. Implementation of Government's stimulus package through increased public spending on key infrastructural projects is also expected to enhance growth particularly during the year.

Social Scene The total social sector budget estimates was KSh 236,578.7 million in 2009/2010 as compared to KSh 197,537.4 million in 2008/09 an of 19.8 per cent. During the year under review, the highest share of the social sector expenditure budget was in the Ministries of education and health at 73.8 per cent and 16.0 per cent, respectively. Enrolment in the various levels of education institutions increased, standing at; pre-primary (1.9 million), primary (8.8

Summary and Outlook

million), secondary (1.6 million), university (177,735), other post secondary institutions (97,837) and adult education (291,194).

A total of 664,716 births and 189,985 deaths were recorded albeit low coverage. Hence, the Government has embarked on sensitization campaigns to address the low coverage rates. There were 80,464 registered medical personnel in 2009 compared to 76,883 in 2008. Malaria and diseases of respiratory system constituted the highest incidence of morbidity at 31 per cent and 25 per cent respectively.

Annual benefits for social workers from the NSSF increased by 7.7 per cent while the annual contributions decreased by 0.5 per cent. Women Groups contribution improved from KSh 547.3 million in 2008 to KSh 548.4 million in 2009. To address the plight of the poor and vulnerable households as well as the Orphans and Vulnerable Children (OVC), a financing mechanism is being implemented on a pilot basis. A total of KSh 1.4 billion was allocated in 2009/2010 with KSh 1.0 billion disbursed directly to the recipients. To address the gender disparities in employment, the Government is enforcing the attainment of the target 30 per cent women representation through making women appointments at key decision making levels.

Employment, Earnings and Consumer Prices

Total employment, excluding rural small scale agriculture and pastoralist activities, went up by 4.5 per cent to 10,399.5 thousand in 2009. The modern sector of the economy registered an improvement in job creation, with the number of new jobs being 55.5 thousand in 2009 up from 34.0 thousand in 2008. The private and public sectors recorded positive growths in employment of 3.1 and 2.4 per cent, respectively. This is attributed to favourable business environment, availability of credit from financial institutions and increase in investment opportunities in the country during 2009.

In 2009, the nominal wage bill went up by 7.7 per cent from KSh 707.4 billion in 2008 to KSh 761.6 billion in 2009. The increase in the public sector wage bill was 8.2 per cent which was slightly lower than the growth of 11.0 per cent recorded in 2008. Overall annual average earnings per employee, registered an increase of 4.0 per cent to KSh 378,349.6 per annum in 2009.

On Labour Day 2009, the Government announced new statutory minimum wage rates that reflected a 20.0 per cent increase in wages specified in the Regulative of Wages Agriculture Order 2009 and 18 per cent for General Order, 2009. The last review was done in 2006.

The overall annual inflation decreased from 16.2 per cent in 2008 to 9.2 per cent in 2009. This decline was mainly due to a reduction of crude oil prices in the world market and prudent macroeconomic policy management.

Money, Banking and Finance

The real growth in the financial sector increased by 4.6 per cent in 2009 compared to a 2.7 per cent growth registered in 2008. Key market indicators showed improved performance at the equity market with the volume of shares traded increasing from 855 million in 2008 to 1,124 million shares in 2009. The total value of shares rose to KSh 13,043 million. Market capitalization declined from KSh 854 billion recorded in December 2008 to KSh 832 billion in December 2009, partly attributed to the decline in prices of most shares. The NSE 20 Share Index dropped by 7.8 per cent to close at 3,247 points in December 2009.

In the year under review, the Monetary Policy Committee (MPC) reviewed the Central Bank Rate (CBR) four times to finally stand at 7.00 per cent in November 2009 from 8.50 per cent in December 2008. Minimum cash ratio requirement was reviewed downwards from 6.00 per cent in December 2008 to 4.50 per cent in July 2009. Commercial banks maintained an average liquidity that was above 40.0 per cent. The 91-day Treasury bill interest rate fell by 1.77 percentage points while the interbank interest rate dropped by 3.72 percentage points.

**Public
Finance**

In 2009/10, the expenditure by Central Government is expected to expand by 31.9 per cent to stand at KSh 887.0 billion, of which KSh 663.9 billion is allocated to the recurrent account. Development expenditure accounted for 28.5 per cent of the total expenditure in 2009/10 as compared to 23.1 in 2008/09. In the review period, total expenditure as a percentage of the GDP is expected to rise to 39.0 per cent as compared to 32.4 in 2008/09.

Central Government revenue including grants is expected to record a 15.3 per cent increase to stand at KSh 612.6 billion. Revenue as a per cent of GDP is also expected to rise to 26.9 per cent. The fiscal deficit is expected to widen necessitating increased short term and long term domestic financing by 30.3 and 53.2 per cent, respectively. The stock of total outstanding debt as end June 2009 amounted to KSh 889.9 billion as compared to KSh 748.5 billion owed one year earlier.

The expenditure by local authorities is expected to grow from KSh 25.3 billion in 2008/09 to KSh 29.4 billion in 2009/10. Revenue generated by local authorities is expected to reach KSh 16.4 billion from KSh 17.7 billion realised in 2008/09. Further, the local authorities expected to receive KSh 10.4 billion from the Central Government through LATF mechanism compared to KSh 9.3 billion transferred in 2008/09.

**International
Trade and
Balance of
Payments**

In 2009, domestic exports grew marginally by 0.3 per cent while re-exports declined by 4.1 per cent. This is an indication that total exports stagnated in the review period. On the other hand, total imports grew by 2.3 per cent in 2009 compared to a 27.4 per cent growth recorded in 2008. The stagnation in exports coupled with slow expansion in imports caused the volume of trade to grow by a paltry 1.6 per cent in 2009 compared to relatively faster growth of 26.8 per cent in 2008. This could be attributed mainly to the simultaneous reduction in aggregate demand for goods and services across all major world economies following the recession in 2008. As a result of these developments in exports and imports, the trade deficit deteriorated from KSh 425,705 million in 2008 to KSh 443,147 million in 2009, representing 4.1 per cent compared to a deterioration of 28.8 per cent in 2008. Tea, Horticulture, coffee and articles of apparels and clothing accessories were the leading export earners, collectively accounting for 50.5 per cent of the total domestic export earnings.

Balance of payments position recorded a surplus of KSh 75,180 million in 2009 compared to a deficit of KSh 33,161 million in 2008. The improvement witnessed in the balance of payments position was on account of increased net capital inflows compounded by improvement in the current account balance from a deficit of KSh 137,147 million recorded in 2008 to a deficit of KSh 124,446 million in 2009. The capital and financial account recorded a surplus of KSh 215,864 million compared to a surplus of KSh 83,197 million recorded in 2008 as result of increased inflows of foreign direct investment and capital inflows.

Summary and Outlook

On the basis of annual average exchange rate, the Kenya Shilling depreciated against the US dollar to exchange KSh 77.35 in 2009 compared to KSh 69.18 per US dollar in 2008. Overall, the Kenya shilling depreciated marginally against world currencies as reflected by the trade weighted exchange rate index which deteriorated from 712.85 points as at December 2008 to 718.19 points as at December 2009. This can be partly attributed to the global economic downturn coupled with the decline in remittances inflow from US\$ 611.4 million in 2008 to US\$ 609.2 million in 2009.

Agriculture The effects of the global economic recession coupled with drought in various parts of the country resulted in continued contraction of the agricultural sector. As a result, the agricultural sector value added decelerated albeit at a slow pace from a revised growth of negative 4.3 per cent in 2008 to negative 2.7 in 2009. The decline is attributed to lower production of maize, tea, sisal, pyrethrum, rice paddy and horticulture produce in the year under review. Maize production increased marginally to 27.1 million bags in 2009 from 26.0 million bags recorded in 2008. Consequently, the value of marketed cereals declined by 13.4 per cent from KSh 13,398.4 million in 2008 to KSh 11,604.0 million in 2009. The tea sub-sector decelerated by 9.2 per cent from 345.8 thousand tonnes in 2008 to 314.1 thousand tonnes in 2009. The quantity of marketed horticultural produce declined by 6.4 per cent from 193.1 thousand tonnes in 2008 to 180.8 thousand tonnes 2009 mainly as a result of depressed demand for cut flowers and fruits in the international market.

Increased production was however realized in the coffee, wheat, sugarcane and the livestock sub sectors. Coffee production increased by 35.7 per cent from 42.0 thousand tonnes in 2007/08 crop year to 57.0 thousand tonnes in 2008/09 crop year. Wheat production increased from 86.2 thousand tonnes in 2008 to 129.2 thousand tonnes in 2009. The value of livestock and livestock products increased by 16.3 per cent from KSh 30,629.1 million in 2008 to KSh 35,620.1 million in 2009. The volume of marketed milk increased by 2.0 per cent from 399 million litres in 2008 to 407 million litres in 2009.

In 2009, the country was about 60.0 per cent reliant on domestic production of its food requirements. The Self Sufficiency Ratio (SSR) for the year was estimated at 58.7 per cent for vegetable products and 100.5 per cent for animal products. The average per caput supply of calories which was estimated at 1,790 in 2008 increased to 1,797 calories per person per day in 2009. The Import Dependency Ratio (IDR) stood at 42.2 per cent in the year under review.

Environment and Natural resources Total development expenditure by Government on water supplies and related services is expected to increase by 22.0 per cent from KSh 15,291 million in the Financial Year (FY) 2008/09 to KSh 18,649 million in FY 2009/10, following increased funding. Total earnings from fish landed rose from KSh 11,454 million in 2008 to KSh 12,013 million in 2009 attributed to favorable domestic and export market prices. The value of freshwater fish increased from KSh 10,718 million in 2008 to KSh 11,233 million in 2009, accounting for 93.5 per cent of the total output from the fisheries sub-sector in 2009. Quantity of mineral production however declined by 9.4 per cent from 1,545 thousand tonnes in 2008 to 1,399 thousand tonnes in 2009. Population of most wildlife species declined in the year under review due to severe drought conditions. The forest plantation stocking also decreased from 114.0 thousand hectares in 2008 to 107.0 thousand hectares in 2009, mainly as a result of high planting failures and fire damages.

Energy Volatility of international crude oil prices coupled with the drought experienced in the better part of 2009 increased domestic prices of petroleum products and electricity. During the year under review, the cost of electricity went up as a result of increased thermal power generation. Relative to 2008, the month on month international prices for Murban, the main crude oil imported into the country, was lower in 2009 except for the months of November and December.

The volume of crude oil imported into the country dropped from 1,773.3 thousand tonnes in 2008 to 1,627.9 thousand tonnes in 2009. On the other hand, crude oil intake at the refinery increased marginally from 1,582.7 thousand tonnes to 1,605.0 thousand tonnes during the same period.

Total electricity generation almost stagnated at the 2008 level of 6,455.6 GWh. Hydroelectric power generation declined substantially by 35.0 per cent from 3,267.0 GWh in 2008 to 2122.0 GWh in 2009. However, electricity generation from thermal and geothermal sources rose by 39.7 and 24.5 per cent, respectively, in 2009.

Per capita energy consumption in terms of kilograms of oil equivalent went up by 4.2 per cent from 97.5 kilograms of oil equivalent per person in 2008 to 101.6 kilograms of oil equivalent per person in 2009.

The number of customers connected under Rural Electrification Programme (REP) grew by 27.2 per cent to 205,287 in June 2009 up from 161,354 as at June 2008. This was due to the fact that the Government placed a high premium on the energy sector in recognition of the pivotal role it plays in socioeconomic development, in line with the Kenya Vision 2030.

Manufacturing Manufacturing sector recorded a lackluster performance as the global financial crisis continued to unwind. The sector recorded a decelerated growth of 2.0 per cent in 2009 after registering a revised growth of 3.6 per cent in 2008. Despite the sector being identified as a key driver of the economy, it faced a myriad of challenges ranging from high cost of production, competition from cheap imports, high taxes and low credits from financial institutions. These challenges hampered the sector from realizing its full potential.

The sub-sectors that registered growth include leather and footwear, rubber products, plastic products, non-metallic minerals and miscellaneous manufacture and those in food manufacturing. On the other hand production of beverages, tobacco, textiles, paper and paper products declined significantly.

Direct formal employment in the manufacturing sector registered a growth of 0.3 per cent from 264.1 thousand persons in 2008 to 264.9 thousand persons in 2009. Direct formal employment to Kenyans in the EPZ however contracted marginally from 30.2 thousand persons in 2008 to 30.1 thousand persons in 2009.

The value of manufacturing output rose by 5.1 per cent to KSh 738,829 million while value added increased by 6.3 per cent to KSh 216,833 in 2009.

Building and Construction In the year 2009, building and construction sector's key economic indicators recorded improved performance, with cement consumption increasing by 21.1 per cent to 2,671.2

Summary and Outlook

thousand tonnes in 2009. The increased consumption was mainly a result of several on-going roads and Constituency Development Fund (CDF) construction projects, among others. Loans and advances from commercial banks to the sector expanded by 4.0 per cent from KSh 29,247 million in 2008 to KSh 30,414 million in 2009. The index of Government expenditure on roads increased to 279.3 in 2009 from 223.8 in 2008.

The total value of reported private building works completed in selected main towns rose by 19.5 per cent to KSh 14,725.8 million in 2009 from KSh 12,323.2 million in 2008. The total estimated cost of reported new private buildings completed increased by 43.5 per cent to KSh 9,038.3 million in 2009. The total value of building plans approved rose by 11.7 per cent from KSh 69,321.7 million in 2008 to KSh 77,443.8 million in 2009. Disbursement of funds by the Kenya Roads Board (KRB) for road construction, rehabilitation and maintenance activities increased by 5.3 per cent from KSh 19.0 billion in 2008/09 to KSh 20.0 billion in 2009/10. The sector's total wage employment increased by 10.1 per cent to stand at 93.4 thousand persons in 2009.

Tourism The Government's commitment to providing an enabling environment, coupled with successful tourism promotion and political stability, resulted in renewed confidence in the country as a preferred destination. Accordingly, tourism earnings improved by 19.5 per cent from KSh 52.7 billion in 2008 to KSh 62.5 billion in 2009, on account of improved quality and volume of tourists. The number of inbound tourists recovered remarkably by 23.9 per cent from 1,203.2 thousand in 2008 to 1,490.4 thousand in 2009. This positive development was achieved despite a background of the negative economic effects associated with the global economic recession and uncertainties caused by the influenza A(H1N1) outbreak.

Over the review period, the hotels sub-sector recorded impressive business with the number of bed-nights occupied increasing substantially by 68.8 per cent from 3,699.0 thousand in 2008 to 6,242.8 thousand in 2009. The overall rate of beds occupied went up from 26.0 per cent in 2008 to 36.5 per cent in 2009. Similarly, the average occupancy rate for bed-rooms improved from 32.2 per cent in 2008 to 39.3 per cent in 2009. The improved volume of international arrivals coupled with aggressive domestic marketing resulted in the number of visitors to game parks and reserves expanding by 46.0 per cent to 2,383.3 thousand in 2009. The number of visitors to Museums, Snake Parks and other historical sites increased by 54.7 per cent from 493.2 thousand in 2008 to 763.1 thousand in 2009.

Transport, Storage and Communications The transport, storage and communications sector registered improved performance during the review period, mainly supported by the significant growth in the communications sub-sector. The total number of newly registered vehicles posted a remarkable increase of 32.8 per cent to 161,813 units in 2009 from 121,831 units recorded in 2008. Reported traffic accidents increased by 24.3 per cent from 9,093 in 2008 to 12,369 in 2009. The operations of railway sub-sector declined further for the second consecutive year, with freight tonnage transported decreasing from 1.8 million in 2008 to 1.4 million in 2009, partly due to poor rail infrastructure and obsolete equipment.

Traffic throughput handled at the port of Mombasa expanded by 16.1 per cent to stand at 19,062 thousand tones in 2009 compared to 16,415 thousand tones in 2008. The increase was largely driven by imports which recorded a growth of 24.0 per cent in the review period and accounted for 86.6 per cent of the total cargo handled. In the pipeline transport subsector,

throughput of white petroleum products rose to 4,323.7 thousand cubic metres in 2009 from 3,848.6 thousand cubic metres realized in 2008, registering a growth of 12.3 per cent. The aviation industry also posted a notable 8.0 per cent growth in passenger traffic, recovering from a 9.4 per cent drop recorded in the previous year.

The communications sub-sector continued to witness improved performance. The mobile telecommunications maintained its upward trend by posting a 34.2 per cent growth in the subscriber base, with connections rising to 17.4 million in 2009. The industry also witnessed the issuance of two (2) cable landing rights licenses to The East African Marine System (TEAMS) and Sea Sub-marine Communications (SEACOM) Limited.

Governance The Government in its policy documents has continually addressed the issue of public safety, law and order as one of the foundation on which economic performance is based. The reduction of crime levels improves social and economic development, thus benefiting the Kenyan economy and the quality of life for a very large section of the population. In 2009, crimes reported to Police increased by 13.8 per cent from 63,476 in 2008 to 72,255. The total ammunition recovered and surrendered increased tremendously from 9,621 in 2008 to 114,527 in 2009 while firearms recovered reduced from 716 in 2008 to 423 in 2009 and those surrendered reduced from 334 in 2008 to 163 in 2009.

The number of persons reported to have committed offences increased by 22.9 per cent from 61,438 in 2008 to 75,501 in 2009. Major increases were noted among cases of infanticide (63.2 per cent), causing death by dangerous driving (40.1 per cent) and manslaughter (11.5 per cent). Reductions were noted among offences related to procuring abortion (24.4 per cent), concealing birth (17.4 per cent), suicide (5.2 per cent) and murder (4.6 per cent). The number of persons reported to have been involved in offences related to dangerous drugs increased by 41.4 per cent.

Corruption cases reported to KACC increased by 16 per cent from 3,637 in 2008 to 4,473 in 2009 while cases filed at the judiciary increased from 347,169 in 2008 to 401,295 in 2009 and those disposed of by 17 per cent from 358,244 to 420,901 in the same period. However, pending cases reduced by 12 per cent from 788,595 in 2008 to 696,726 in 2009.

The total convicted prison population increased by 22.4 per cent from 88,242 in 2008 to 107,987 in 2009 while that of remandees increased by 27.5 per cent from 71,411 to 91,024 in the same period. The total daily average population (DAP) increased by 11.9 per cent from 46,602 in 2008 to 52,142 in 2009. There was a reduction of offenders put on probation by 21.3 per cent from 17,529 in 2008 to 13,788 in 2009. The number of offenders serving community service orders increased by 15.2 per cent from 30,813 in 2008 to 35,488 in 2009.

The number of entry permits renewed increased by 80.3 per cent from 3,302 in 2008 to 5,953 in 2009 while passports issued increased by 19.4 per cent from 128,345 to 153,266 in the same period. Aliens registered increased marginally by 7.4 per cent from 17,451 to 18,751 in the period under review. There was a reduction of 3.8 per cent in the number of entry permits issued by Department of Immigration from 11,530 in 2008 to 11,096 in 2009.

Summary and Outlook

The Revised Urban Consumer Price Index The Consumer Price Index (CPI) is widely used for estimation of the rates of inflation, as a tool in wage negotiations and as a deflator of various macroeconomic indicators. It is of paramount importance that the compilation of the index be based on an unbiased formula and on baskets that reflect most recent consumption patterns. The Kenya Integrated Household Budget Survey (KIHBS), 2005/06 revealed that consumer behaviour, incomes, tastes and preferences had changed over time. This necessitated the revision of the basket of consumer goods and services as well as adoption of new income groups.

The new baskets of goods and services has 234 unique items. As recommended by the International Labour Organization CPI manual (2004) these items have been classified into 12 broad groups, based on the Classification of Individual Consumption by Purpose (COICOP) system. This reclassification of items has called for re-computation of the weights for the groups and subgroups. At the same time, the geometric mean approach (Jevons Index) of averaging the price relatives at the elementary level has been adopted due to its property of producing a more stable index. The modified Laspeyres formula is used at the higher levels of aggregation.

Key Highlights of 2008/09 Kenya Demographic and Health Survey The Kenya Demographic and Health Survey (KDHS) 2008-09 findings indicate that the proportions of both men and women decline with increasing age, reflecting a relatively young age structure of the Kenyan population. Most of the respondents have some formal education, with 69 per cent of the men and 61 per cent of the women having at least completed primary education.

Total Fertility Rate (TFR) declined from 4.9 in 2003 to 4.6 in 2008. Contraceptive use among currently married women shows an improvement with almost half of them (46 per cent) currently using some method of contraception, up from 39 per cent as recorded in 2003. The results further show that the under-five-mortality rate decreased to 74 deaths per 1,000 live births in 2008-09 from 115 deaths per 1,000 live births in 2003. Infant mortality rate decreased to 52 deaths per 1,000 live births in 2008-09 from 77 in 2003. On maternal and child health, more than nine out of ten mothers reported visiting a health professional at least once for antenatal care for the most recent birth in the five year period preceding the survey. Overall, 77 per cent of children aged 12-23 months are fully vaccinated and only three (3) per cent of children have not received any vaccines.

The survey found that 61 per cent of households in Kenya report owning at least one mosquito net (treated or untreated), while 54 per cent report owning at least one ITN. Fifty-one per cent of children under five years and 53 per cent of pregnant women were reported to have slept under a mosquito net the night prior to the interview. However the proportion of children under five years and pregnant women who slept under an ITN the night prior to the interview declined to 46 and 48 per cent, respectively.

The survey further revealed that 39 per cent of the married, divorced or separated women aged 15 – 49 years reported to have ever been physically or sexually violated by their husbands or partners during their lifetime compared to 44 per cent in 2003.

The results show that knowledge of HIV prevention methods is widespread, although there are differences between women and men. Three-quarters (75 per cent) of women and 81 per cent of men aged 15 to 49 years know that that people can reduce the risk of getting AIDS virus by using condoms every time they have sexual intercourse. Ninety two per cent of women and 93

per cent of men know that limiting sexual intercourse to one uninfected partner can reduce the chances of getting HIV. Just under 90 per cent of women and men say that abstinence can lower the risk of becoming infected with the virus that causes AIDS.

Outlook Available indicators suggest that the economic recovery is likely to be more assertive in 2010. The economy is likely to benefit from sufficient rains experienced during the first four months of the year and forecasted to continue to the next half of 2010. The country is also likely to gain from a global economic recovery through improved demand for Kenyan exports as well as improved tourists arrivals. When the East Africa Community (EAC) common market protocol takes effect in July 2010, the country is likely to benefit from increased trade with the other East African countries due to the expanded market.

Agriculture is likely to record increased production given the favourable weather conditions, the Government's efforts to boost the sector through rehabilitation and expansion of land under irrigation and provision of subsidies on fertilizer. The benefits emanating from the favourable environment have been realised during the first quarter of 2010 when food prices were considerably lower compared to the same period of 2009, and significantly contributed to the fall in inflation. Exporters of horticultural produce are likely to gain from better international commodity prices which are projected to rise on the strength of improving global economy.

The Government's stimulus package is also expected to enhance growth during the first half of 2010. The downward revision of CBR by the Central Bank to 7.00 in December 2009 started bearing fruits as the banks responded by lowering interest rates during the first four months of 2010 thereby transmitting the gains to the private sector through cheaper credit. Indications of resurgence of confidence in the Nairobi Stock Exchange (NSE) are already being manifested in increased activities at the stock market where the 20-share index has risen from 3,247.44 in December 2009 to 4,289.85 as at mid April 2010. Consequently, the domestic economy is projected to grow by between 4.0 and 5.0 per cent in 2010.

Chapter 1

International Scene

Overview The global economy went through a recession for the second year running in 2009 that mainly affected the real and financial sectors. World real Gross Domestic Product (GDP) recorded a growth of negative 0.8 per cent in 2009 compared to 3.0 per cent in 2008. This was due to a decline in demand, investment and a contraction in world trade from 3.0 per cent in 2008 to negative 12.5 per cent in 2009. In response to the downturn, many governments employed the use of fiscal stimulus packages and public policy reforms mostly in the financial sector. Notably, most central banks in advanced economies aimed at ensuring a reduction in interest rates, increasing liquidity, and sustaining access to credit by supporting banks with guarantees and capital injections. These remedial measures reduced uncertainty and improved financial conditions leading to increased activity in capital markets and international capital flows in the second half of 2009.

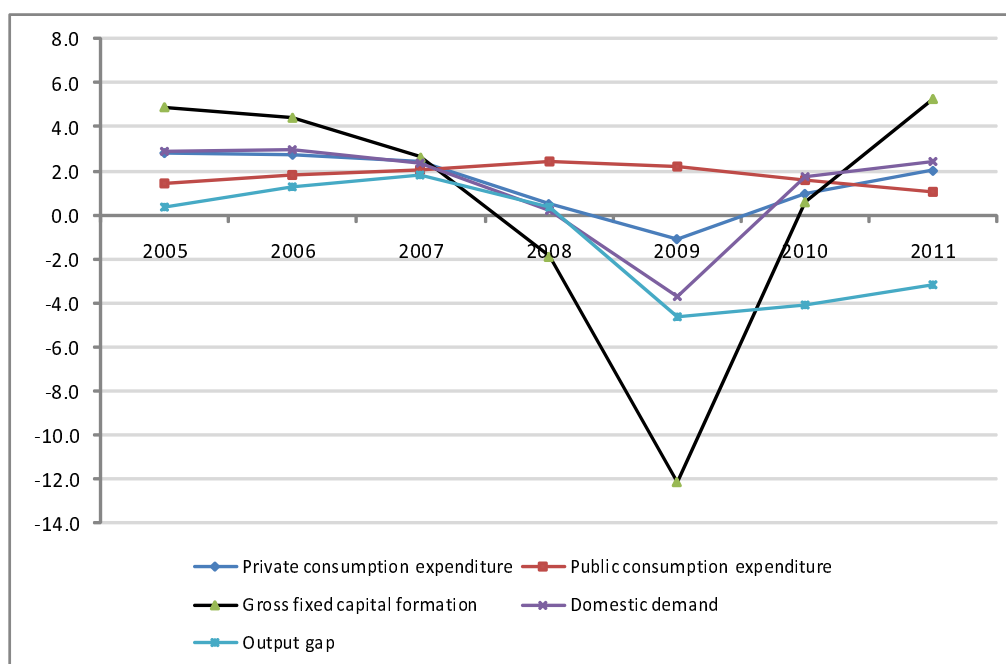

1.2. Generally, global consumer prices eased in 2009 on account of low demand, a decline in cost of production due to lower wages, fuel prices and improved agricultural output in most regions. Low economic activity in the year led to decreased demand and a drop in crude oil prices from an annual average of US\$ 91.77 a barrel in 2008 to US\$ 53.92 in 2009 (inflation adjusted). The comparatively low oil prices in 2009 caused a decline in growth for most oil exporting countries.

1.3. The global current account balance declined to US\$ 24 billion in 2009 from US\$ 191 billion and US\$ 333 billion in 2008 and 2007, respectively. In developing economies especially those dependent on cross border trade, the impact of the recession was experienced mainly through deterioration in the balance of payments.

1.4. Estimates indicate that there will be a recovery in 2010 with world output projected to increase by 3.9 per cent. However, the process will be slow and accompanied by the challenges of constrained credit and rising unemployment in many advanced and emerging economies.

OECD Countries

Regional Economic Analysis 1.5. Table 1.1 presents estimated and projected key economic indicators for selected Organization of Economic Cooperation and Development (OECD) countries for the period 2007 to 2011. Most economies in the OECD contracted with their combined growth in real GDP estimated at negative 3.5 per cent in 2009 from 0.6 per cent in 2008. This was due to severe decline in both domestic demand and investments. To enhance recovery, most central banks of the OECD adopted unconventional monetary policy, implementing historically ultra-low interest rates in the absence of high inflation environment to promote investment borrowing. Inflation in the OECD declined from 2.5 per cent in 2008 to 1.3 per cent in 2009. These low inflationary conditions prevailed in most countries in 2009 and are projected to drop to 0.8 per cent in 2010 in the OECD.

Figure 1.1: Trend in Selected Economic Indicators¹ for the OECD, 2005-2011

Source: Generated from OECD database.

¹Percentage change from the previous year for all indicators except output gap which is the deviation of actual GDP from potential GDP as a per cent of potential GDP.

1.7. A decline in domestic demand, private sector savings and investments in most OECD countries resulted in current account imbalances in 2009. Current account balances as a percentage of GDP in the OECD economy improved to negative 0.9 per cent in 2009 compared to negative 1.6 per cent in 2008. However, Norway, Switzerland and Sweden recorded surpluses.

1.8. In the Euro area, the current account deficit eased by 0.2 percentage points to negative 0.6 per cent in 2009 due to worsened government sector saving-investment balances. The differences in the current account balances of countries in the Euro area were due to country-specific adjustments to the recession and other underlying structural factors.

1.9. The unemployment situation in the region worsened from 5.9 per cent in 2008 to 8.2 per cent in 2009, necessitating labour market reforms in most OECD countries to assist households. The level of unemployment is projected to increase to 9.0 per cent in 2010 but may reduce in 2011 as economies respond to growth-enhancing policies.

1.10. Economic performance in OECD countries is expected to improve with increased investments by the private sector. Consequently, gross fixed capital formation and real domestic demand are projected to rise by 0.6 and 1.7 per cent, respectively, in 2010 (Figure 1.1). However, effects of the recession to economies of the OECD are expected to take a longer time to recover to the pre-crisis levels. This is indicated by the projected levels in the output gap of negative 4.1 and 3.2 per cent in 2010 and 2011, respectively. The expected changes from reforms in the financial sector, fiscal and monetary policies being implemented to address the effects of the recession will probably be realized in the long run.

1.14. The region's current account balance recorded a deficit of 3.7 per cent in 2009 from a surplus of 0.2 per cent in 2008, which was accompanied by a worsened fiscal balance as shown in Figure 1.2. In 2009, the terms of trade deteriorated by 9.1 per cent. The region maintained a double-digit inflation with consumer prices increasing by 10.5 per cent in 2009 compared to 11.9 per cent in 2008. The ease in inflation is due to relative stabilisation in food and oil prices which were high in 2008 compared to 2009.

Figure 1.2: Trend in Selected Indicators¹ for Sub-Saharan Africa, 2005-2010

Source: Data from IMF Regional Economic Outlook for SSA

¹ Real GDP and TOT are percentage changes, others are per cent of GDP

East African Community

1.15. Countries in the East African Community (EAC) customs union were not spared from the shocks of the global recession in 2009. The combined real GDP growth in the region is estimated to have declined to 4.5 per cent in 2009 from 5.8 per cent recorded in 2008. All countries with the exception of Kenya recorded decelerated growths in their GDP growth in 2009 compared to 2008 as shown in Figure 1.3. In 2010, GDP growth is projected to increase by 5.1 per cent. Burundi, Tanzania and Kenya are expected to record higher rates of growth in 2010.

1.16. The region has a high dependency on export of agricultural produce mainly horticulture, tea and coffee whose demand in the global market remained largely passive. This resulted in the decline in growth even with a general improvement in the prices of the commodities during the second half of 2009. Most countries in the region are therefore estimated to have had a worsening of their current account deficits in 2009.

1.21. The combined output of **ASEAN-5** countries is estimated to have declined from a growth of 4.7 per cent in 2008 to 1.3 per cent in 2009 and are projected to expand by 4.7 per cent in 2010. However, individual countries are expected to record mixed performance with only Indonesia and Vietnam expected to record improved growth in 2010.

1.22. The stimulus measures implemented by many countries in the Asian continent in 2009 are likely to support domestic demand and sustain growth in 2010. High currency reserves accumulated in 2009 by some countries are likely to boost output in the continent and propel growth to other economies outside Asia.

Middle East and Mashreq

1.23. Majority of countries in the Middle East and Mashreq are heavily dependent on oil with recent increased importance of real estate in growth and employment. In 2009, the total real GDP growth rate in the Middle East was 2.2 per cent compared to 5.4 per cent in 2008, mainly as a result of a dip in oil prices. Among oil exporters in the region, real GDP growth is estimated to have declined from 4.9 per cent in 2008 to 1.3 per cent 2009. Many governments in the region had recourse to increase spending so as to slow any downturn in the non-oil sectors. This led to a fall in the current account surplus from 18.3 per cent in 2008 to 2.6 per cent in 2009.

1.24. In Mashreq countries, real GDP grew by 4.5 per cent in 2009, which was 2.5 percentage points lower than the growth realized in 2008. The non-exporting countries, which have limited connections to the rest of the world through financial markets, were able to rely on the region's oil exporters as outlets for goods and surplus labour, especially in the real estate industry.

Outlook 1.25. In 2010, the global economy is expected to progress on a recovery path from the recession experienced in 2009. Figure 1.4 shows trends in real GDP growth since 2007 and projections for 2010 and 2011. Generally, economic activity is expected to pick up across all regions with positive growth projected for 2010 and 2011. However, a sustained global recovery in 2010 and beyond is likely to depend more on the financial sector ability to provide adequate credit to trigger demand, investment and boost productivity.

1.26. Africa's real GDP is projected to grow at 4.3 per cent in 2010 due to anticipated increase in demand in the global market and a return of Foreign Direct Investments (FDI), higher private portfolio and equity flows. Most EAC economies are projected to grow at a higher rate and also record a substantial reduction in inflation in 2010 compared to 2009.

Chapter 2

Domestic Economy

Overview The anticipated strong economic recovery, predicted in early 2009, was experienced only during the first quarter of 2009 when a growth of 5.7 per cent was attained. The momentum slowed in the second quarter recording a measly growth of 1.2 per cent and stagnated during the third quarter. There was a moderate rebound in the fourth quarter of 2009 when a growth of 3.4 per cent was realized. Overall, the economy posted a real Gross Domestic Product (GDP) growth of 2.6 per cent in 2009 compared to a revised growth of 1.6 per cent in 2008.

2.2. On one hand, growth was mainly supported by resurgence of activities in the tourism sector, resilience in the building and construction industry, and the Government's intervention through an economic stimulus package. On the other hand, a mixture of unfavorable weather and sluggish internal and external demands restrained growth during the period under review. Slowdown in household borrowing during the year accounted for the lethargic domestic demand while global economic recession subdued external demand. The global economic recession was felt mainly through depressed demand for horticultural produce abroad and inadequate recovery in tourism.

2.3. From the supply side, Transport and Communication, Hotels and Restaurants, and Construction were the main drivers of the economy. Analysis of the sectoral performance reveals that while most sectors maintained positive growths, Agriculture and Forestry contracted by 2.6 per cent in 2009. However, this contraction was slower than the 4.1 per cent recorded in 2008. Key sectors that recorded impressive growths in 2009 include Hotels and Restaurants, Construction, Transport and Communication, and Financial Intermediation. Manufacturing and Wholesale and Retail trade maintained positive growths though slower than in 2008 while Mining and Quarrying, and Electricity and Water recorded substantial declines in the year under review.

2.4. The overall annual inflation fell to 9.2 per cent in 2009 compared to 16.2 per cent in 2008 primarily on account of a decline in food and oil prices. Despite the low inflation experienced in 2009 and Central Bank's attempts to stimulate growth through an expansionary monetary policy, all real interest rates remained negative except for commercial banks' maximum lending rates which stood at 5.6 per cent. The Central Bank reduced the cash ratio requirement and cut the Central Bank Rate (CBR) during the year under review signaling a policy shift with expectations that commercial banks and other lending institutions would pass on the gain to borrowers through cheaper credit.

2.5. In 2009, employment was boosted by the Government's stimulus package designed for labour intensive projects. The jobs created were mostly informal within the Construction, Transport and Storage, and Hotels and Restaurants industries. In the 2009/10 budget, the Government adopted an expansionary approach with the objective of stimulating economic growth, creating employment and improving food security in the country. The implementation process was envisaged to be in form of economic stimulus through increased public spending on key infrastructural projects and public works which were spread throughout the constituencies. As a result, the total Government outlay for the fiscal period 2009/10 is expected rise to KSh

887 billion reflecting a growth of 31.0 per cent.

2.6. The period under review saw stagnation in exports coupled with a deceleration in expansion of imports which resulted to a growth of 1.6 per cent in volume of trade compared to a 27.4 per cent growth in 2008. As a consequence, trade deficit deteriorated in 2009 compared to 2008. However, overall balance of payments position registered a surplus of about KSh 75 billion in 2009 compared to a deficit of KSh 33 billion in 2008 on account of increased net capital inflows.

Sectoral Analysis

Agriculture and Forestry 2.7. The sector's production has been declining since 2005. After contracting by 4.1 per cent in 2008, the sector's value added contracted further by 2.6 per cent in 2009. This performance was attributed to a combination of causes among them poor weather conditions, international uncompetitiveness, and depressed demand of horticultural produce in the international market.

2.8. The decline in the sector's performance was on account of lower production of tea, sisal, pyrethrum, rice paddy, and horticultural produce in 2009. Consequently, the value of marketed cereals declined by 13.4 per cent while quantity of marketed horticultural produce declined by 6.4 per cent during the year under review.

2.9. In addressing the challenge of inadequate rainfall, the Government dramatically increased budgetary allocation to the sector by 48 per cent to KSh 34.5 billion during the 2009/10 financial year from the previous year's allocation of KSh 23.3 billion. This was earmarked to fast track the revival of moribund irrigation schemes while at the same time establishing new ones. These efforts need to be upheld to ensure sustainability of the sector's growth.

Manufacturing 2.10. A number of challenges continued to restrain expansion of the manufacturing sector in 2009 as was the case in 2008. Over the years, the manufacturing industry has been supported by a vibrant domestic demand as well as the regional market. Cheap imports, high cost of production, high cost of credit from financial institutions and drought in the first half of the year hampered growth in the sector. In 2009, the sector grew by a slower rate of 2.0 per cent compared to 3.5 per cent in 2008.

2.11. While the Manufacture of food, beverages and tobacco increased by 2.0 per cent in 2009 compared to a decline of 1.8 per cent in 2008, suppressed demand led to low consumption of some products leading to a scaling down of production of basic household commodities. High cost of power arising from increased thermal generated electricity also contributed to the low growth of the sector. Many manufacturers resorted to cutting down production in order to reduce the amount of capital tied to inventories.

Transport and Communication 2.12. Activities of Transport and storage recovered from the effects of the post election violence experienced in first quarter of 2008 while telecommunications maintained a strong expansion throughout 2009. The sector also gained from fall in international oil prices and continuing improvement of the roads network during the period under review. A combination of these factors propelled the sector's growth to 6.4 per cent in 2009 compared to 3.1 per cent recorded in 2008.

2.13. Different sub-sectors within the industry witnessed varied levels of performance with mobile telephony emerging as the main force underpinning the expansion. Road passenger, water and air transports were also pivotal in this expansion. However, railway transport posted the second consecutive decline in 2009 which was attributed to uncertainties within the concession and poor railway infrastructure.

2.14. There was fierce competition between mobile telephone service providers that resulted in substantial gains to consumers as the calling charges plummeted. During the year, two undersea cables landed on the Kenyan coast bringing the prospects of cheaper high speed internet services to the country.

Hotels and Restaurants

2.15. After suffering a massive shock from post election violence in 2008, the sector's performance indicators point to an impressive recovery in 2009. Volume of international arrivals rose considerably by 23.9 per cent to 1,490 thousand visitors in 2009 compared to 2008 level while tourism earnings rose from KSh 52.7 billion to KSh 62.5 billion within this period. The sector attained a growth of 42.8 per cent in 2009, the highest recorded by any sector in a decade. The sector's turnaround is primarily attributable to improved security coupled with successful tourism promotion and political stability.

2.16. In absolute terms, the sector's real value added was about KSh 19 billion in 2009 compared to about KSh 21 billion attained in 2007. This is an indication that the sector is yet to recover fully from the aftermath of the post-election violence and the after shocks of the global economic meltdown experienced in 2009.

Financial Inter-mediation

2.17. The sector was one of the key drivers of the economic recovery and expanded by 4.6 per cent in 2009 compared to a growth of 2.7 per cent in 2008. During the year, expansion in domestic credit slowed to 18.2 per cent compared to a growth of 23.3 per cent in 2008. This was against a backdrop of tightened credit conditions by lending institutions as they sought to reduce heightened risk of default. In an effort to encourage banks to increase lending, the Central Bank reduced the CBR four times during the year to stand at 7.00 per cent in December 2009. In addition, the minimum cash ratio requirement was also cut from 6.00 per cent in December 2008 to 4.50 per cent by July 2009. However, the banks remained largely non-responsive to these incentives during the year and therefore the lending rates remained high.

2.18. Broad money supply (M3) rose by 15.9 per cent to stand at KSh 1,044 billion in December 2009. The average interest rate on 91 day treasury bills fell to 6.82 per cent in December 2009 from 8.59 per cent in December 2008. In the capital market, the volume of shares traded increased from 855 million in 2008 to 1,124 million in 2009. However, the NSE 20 Share Index fell by 7.8 per cent to stand at 3,247.4 points in December 2009 compared to 3,521.2 in December 2008.

Electricity and Water

2.19. Water catchments that feed into Masinga dam, the main reservoir for the Seven Forks Hydropower Project, have been faced by persistent drought since 2007. Water supply sub-sector encountered similar challenges during the same period. The drought peaked in 2009 leading to one of most difficult operating environment the industry has witnessed in the recent past resulting to 35 per cent reduction in hydro generated power. Faced with a growing demand for electricity, the players in the industry resorted to intensified thermal generation during the period under review.

2.20. The sector recorded a negative growth of 3.1 per cent in 2009 compared to a positive growth 5.4 per cent in 2008. This was attributable to increased use of thermal generation which requires higher intermediate consumption as opposed to hydro and geothermal power generation. In addition, the drought also adversely impacted on water supply further suppressing growth in this sector.

Construction 2.21. The sector registered the second fastest sectoral growth of 14.1 per cent in 2009 compared to an expansion of 8.2 per cent realised in 2008. The industry has persistently maintained robust growths since 2003 and has been instrumental in supporting economic growth in the country. This expansion has mainly been bolstered by investments in roads, energy, residential and non-residential buildings and communications. Construction of roads, residential and commercial buildings has been a major boost in the country's labour market.

2.22. The growth in construction was reflected in cement consumption which grew by 21.1 per cent in 2009. Index of Government's expenditure on roads rose significantly from 223.8 in 2008 to 279.3 per cent in 2009 while data on building works completed reveal sustenance of growth in construction of private homes. Overall cost index of materials declined from 7.6 per cent in 2008 to 3.1 per cent in 2009 implying that the sector benefited from a slight reduction in prices of inputs.

Gross Domestic Product by Activity 2.23. Tabulation of contributions to GDP by the various industries of the economy are shown in Table 2.1 while their corresponding share contribution are depicted in Table 2.2. The value of the total domestic economic activities, measured at current prices, was estimated at KSh 2,274 billion in 2009. The four main sectors; Agriculture and forestry, Wholesale and retail trade, Transport and communication, and Manufacturing collectively contributed 53.7 per cent of the GDP.

2.24. The share of Agriculture and forestry to GDP declined consistently from 27.2 per cent in 2001 to a low of 21.7 per cent in 2007. However, the sector's contribution embarked on an upward trend from 2008 when it revived to 22.7 per cent and maintained the movement in 2009 to stand at 24.4 per cent in 2009.

2.25. There were slight re-alignment in sectors' importance to the GDP with Agriculture and Forestry, Financial Intermediation, Hotels and Restaurants, and Construction increasing their contributions to GDP by 1.7, 1.0, 0.6 and 0.5 percentage points in 2009, respectively. Taxes (less subsidies) on products, Transport and Communication, and Manufacturing eased their contributions by reductions of 1.8, 0.6 and 0.3 percentage points respectively over the same period.

Table 2.1: Gross Domestic Product by Activity, 2005-2009

Industry	Current Prices - KSh Million				
	2005	2006	2007	2008	2009*

2.26. Table 2.3 shows the contribution of various industries to GDP valued at constant prices (2001 prices). The growth rates as depicted in Table 2.4 are based on constant prices which enable comparison between the years. The table shows that except for Agriculture and Forestry, Mining and Quarrying, and Electricity and Water supply which registered negative growths all the other sectors recorded positive growths.

Table 2.3: Gross Domestic Product by Activity, 2005-2009

Industry	Constant 2001 Prices - KSh Million

2.27. Table 2.5 details how the various industries have contributed to economic growth since 2005. While most of the sectors have consistently contributed positively to growth, Agriculture and Forestry, Fishing, Electricity and Water supply, and Hotels and Restaurants have been erratic in their contributions. In 2009, the key sources of growth included Transport and Communication, Construction, Hotels and Restaurants as well as Taxes less subsidies on products with growths of 29.5, 17.5, 16.2 and 23.0 per cent respectively.

Table 2.5 Sources of Growth, 2005-2009

Industry	Percentages

Chapter 2: Domestic Economy

Expenditure on GDP 2.28. Components of GDP from a demand perspective are shown in Table 2.7 while Table 2.8 presents their corresponding percentage shares. The share of the government final consumption expenditure to GDP declined to 16.3 per cent in 2009 from 16.7 per cent in 2008. This decline was compensated in part by a rise in the shares of the private consumption and increase in inventories. The build up in the inventories during the last two years maybe associated with depressed demand which in turn forced producers to hold their products in form of stocks. Both exports and imports of goods and services declined which was in line with reduced volume of trade as reported in Chapter 7.

2.29. Details of expenditure on GDP categories in real terms and corresponding growth rates are presented in Tables 2.9 and 2.10 respectively, for the years 2005 to 2009. Government and private final consumptions recorded growths of 5.5 and 3.8 per cent in 2009 compared to a growth of 2.3 per cent and a contraction of 1.3 per cent in 2008, respectively. Exports and imports of goods and services declined by 7.0 and 0.2 per cent in 2009 compared to growths of 7.5 and 6.6 per cent in 2008, respectively. The decline was on account of depressed external demand for Kenyan exports and domestic demand for imports.

Private Consumption

2.30 Details of private consumption by broad categories of Classification of Individual Consumption by Purpose (COICOP) are presented in Table 2.11a while their share contributions to total private consumption are shown on Table 2.11b. Food and beverages constitutes the largest proportion of private consumption with about 46 per cent share. Clothing and footwear and Housing continued on a general declining trend.

Gross Fixed Capital Formation 2.31. Gross Fixed Capital Formation (GFCF) by type of asset and their shares at current prices are presented in Tables 2.12a and 2.12b. In 2009, half of the country's investments in fixed assets was in building and structures. This was mirrored by the sustained housing boom during the year. Transport equipment and Other machinery and equipment eased their share contributions to GFCF to 17.6 and 31.5 per cent in 2009 from 18.0 and 35.3 per cent in 2008.

2.32. Details of the real GFCF and its growth rates for the period 2005 to 2009 are presented in Tables 2.13a and 2.13b, respectively. The value of total fixed assets grew by a paltry 0.6 per cent in 2009 compared to 9.5 per cent in 2008 which was attributed to the slowdown in demand for transport, machinery and other equipments during the period under review. Except for Building and Structures which attained a growth of 15.3 per cent in 2009, all the other type of assets declined during this period. Investment in transport equipments recorded the third consecutive decline in 2009.

Disposable Income and Savings 2.33. Table 2.14 shows derivation of Gross National Income (GNI), Gross National Disposal Income (GNDI) and Per capita disposable income. Real per capita disposable income contracted in 2008 and 2009 by 1.2 and 0.2 per cent, meaning that on average Kenyan residents created less wealth in each of the years compared to the period before. Table 2.15 presents details on the National Disposable Income and Savings. In absolute terms the gross savings declined and therefore its ratio to GDP also declined during the review period.

Quarterly Gross Domestic Product 2.34. A summary of the revised economic performance on a quarterly basis is presented in Table 2.16. On average, all the quarters contribute equally to the annual gross domestic product. Agriculture declined in all the quarters of 2009 while Mining and Quarrying contracted in three of the quarters. Construction and Financial Intermediation, Fishing, Public Administration and Education are the only sectors that sustained positive growths in all the quarters. Most of the growth in 2009 came from the first quarter due to existence of political tranquility which was elusive during the same quarter of 2008. The third quarter was the worst performing on account of a peak in the 2009 drought.

Chapter 3

Social Scene

Overview **T**he Government's commitment to invest in social services to improve the welfare of the population has been consistent in the past years. The total social sector expenditure increased by 19.8 per cent from KSh 197,537.4 million in 2008/09 to KSh 236,578.7 million in 2009/10. The Ministry of Gender, Children and Social Development recorded the highest increase in expenditure of 82.3 per cent followed by the Ministries of Labour and Health recording 42.4 per cent and 38.4 per cent respectively. The total development expenditure under the social sector went up by 68.1 per cent from KSh 27,140.4 million in 2008/09 to KSh 45,631.6 million in 2009/10.

3.2. The number of educational institutions increased from 71,753 in 2008 to 73,089 in 2009. Pre-primary institutions increased from 37,954 in 2008 to 38,247 in 2009. In 2009, the number of primary schools was 26,667 of which 18,543 were public schools and 8,124 private schools. Secondary schools increased by 6.2 per cent from 6,566 in 2008 to 6,971 in 2009. Pre-primary enrolment went up by 11.8 per cent from 1.7 million in 2008 to 1.9 million in 2009. Enrolment in primary education for both public and private schools rose by 2.3 per cent from 8.6 million in 2008 to 8.8 million in 2009. The institutions offering complementary primary education known as Non Formal Schools (NFS) and Non Formal Education (NFE) centers recorded an increase in enrolment from 161,231 in 2008 to 163,340 in 2009 with majority enrolled in Nairobi slum areas and the Arid and Semi Arid Land (ASAL) districts. The total enrolment in secondary schools increased by 9.1 per cent from 1,382,211 in 2008 to 1,507,546 in 2009. Over the last five years, there has been tremendous increase in post secondary education enrolment. Technical and university education enrolment rose from 162,828 in 2005 to 249,928 in 2009. Enrolment in public universities increased from 100,684 to 142,556 students in 2008/09 and 2009/10 academic years respectively. Enrolment in the adult education centres increased by 38.8 per cent between 2008 and 2009, while 13,161 adult learners passed literacy proficiency test in 2009.

3.3. Registration of births and deaths indicated a mixed performance from 2006 to 2009. To raise registration coverage rates, the Government has directed its sensitization efforts in arid and semi arid lands that have low registration while less emphasis has been placed on major urban centers in the country. The number of health facilities increased significantly by 8.2 per cent during the period under review. This development is attributed to continued funding through the Constituency Development Fund (CDF). The number of registered medical personnel increased by 4.7 per cent whereas the number of personnel undergoing training decreased by 17.1 per cent in 2009.

3.4. Cash transfer for Orphans and Vulnerable Children (OVC) was started in 2004, in response to the strong need to protect and assist the highly vulnerable children. In order to cater for the old people, the government increased the allocated fund for social protection for older persons by over half a billion in 2009/10. The direct cash disbursement under social protection for older persons and OVC increased significantly from KSh 549.6 million in 2008/09 to KSh 1,118.8 million in 2009/10.

Social Sector Expenditure 3.5. Table 3.1 shows Central Government expenditure on social sector services over the last five years. Total social sector expenditure increased by 19.8 per cent from KSh 197,537.4 million in 2008/09 to KSh 236,578.7 million in 2009/10. During this period, the Ministry of Gender, Children and Social Development recorded the highest increase of 54.4 per cent in recurrent expenditure followed by the Ministry of Youth Affairs and Sports at 35.1 per cent. The education sector expenditure under the Ministries of education recorded the highest combined share of recurrent expenditure of 73.8 per cent while Ministries of health recorded a share of 16.0 per cent. This indicates the government's commitment on improved financing of the social sector towards meeting the Millennium Development Goals (MDGs) on health and education.

3.6. The total development expenditure of the social sector increased significantly by 68.1 per cent from KSh 27,140.4 million in 2008/09 to KSh 45,631.6 million in 2009/10. Development expenditure in the Ministries of health increased almost threefold while that for Ministries of Labour and Gender, Children and Social Development more than doubled. The budget increase in the Ministries of health was mainly towards improvement of health infrastructure to promote preventive and curative services in the sector. The Ministry of Education development budget increased substantially from KSh 9,021.1 million in 2008/09 to KSh 13,049.2 million in 2009/10, an increase of 44.7 per cent. Similarly the Ministry of Higher Education, Science and Technology recorded an increase of 9.6 per cent of its development expenditure in 2009/10. The Ministry of Youth Affairs and Sports recorded an increase in development expenditure by 32.4 per cent reflecting a commitment towards sustaining the Youth enterprise fund.

¹ Expenditure on Youth polytechnics is within the Ministry of Youth Affairs and Sports.² Expenditure is for both Ministry of Medical Services and Ministry of Public Health and Sanitation

3.7. Table 3.2 illustrates the budgetary provision to Local Authorities for implementation of social sector services for the last five years. Local Government expenditure estimate on social services rose by 14.2 per cent from KSh 3, 401.8 million in 2008/09 to KSh 3,885.9 million in 2009/10. Expenditure on education increased by 17.7 per cent from KSh 1,125.6 million in 2008/09 to KSh 1,325.0 million in 2009/10. The expenditure on health and other social services also increased significantly by 14.0 and 10.0 per cent, respectively.

¹ Revised

Education 3.8. The expenditure for the Ministries of education and that of Youth polytechnics from Ministry of Youth Affairs and Sports are presented in Table 3.3. The gross total expenditure increased by 13.8 per cent from KSh 139,878.9 million in the 2008/09 to KSh 159,214.3 million in 2009/10. The recurrent budget for general administration and planning under the Ministry of Education that includes salaries for both Teachers Service Commission (TSC) and Ministry of Education (MoE) personnel increased by 11.8 per cent from KSh 81,841.7 million in 2008/09 to KSh 91,520.2 million in 2009/10. During the period under review, the budget for secondary education recorded an increase of 5.2 per cent compared to an increase of 16.2 per cent for primary education. This shows Government's commitment in the implementation of Free Tuition Secondary Education (FTSE) and Free Primary Education (FPE). However, there was a major decline in recurrent expenditure on special education by 82.8 per cent from KSh 506.7 million in 2008/09 to KSh 87.2 million in 2009/10. Under the Ministry of Higher Education, Science and Technology, the budget for university education increased by 34.1 per cent from KSh 12,899.8 million in 2008/09 to KSh 17,300.7 million in 2009/10. The budget estimate for university education does not include revenue generated from module II/parallel degree programmes. Expenditure for technical education declined by 25.2 per cent from KSh 3,815.3 million to KSh 2,853.4 million in 2008/09 and 2009/10 respectively mainly due to elevation of two national polytechnics to university college status.

3.9. Total development expenditure estimate for the Ministries of education rose by 32.5 per cent from KSh 13,788.1 million in the 2008/09 to KSh 18,273.0 million in 2009/10. The Ministry of Education development budget under general administration increased from KSh 626.6 million to KSh 9,987.8 million over the same period due to the inclusion of the economic stimulus package for financing education projects. During the period under review, the budget more than doubled for adult education and pre-primary education. However, primary education development expenditure declined significantly by 74.7 per cent from KSh 7,284.7 million in 2008/09 to KSh 1,844.2 million in the 2009/10 due to withholding of funding by Development Partners under the Kenya Education Sector Support Programme (KESSP). Development expenditure in teacher education also declined by 72.2 per cent. Under the Ministry of Higher Education, Science and Technology, development budget estimates for technical education declined from KSh 1,412.0 in 2008/09 to KSh 1,104.8 million in 2009/10, a decline of 21.8 per cent. On the other hand, university education development expenditure increased by 32.3 percent from KSh 1,967.0 million in 2008/09 to KSh 2,602.9 million in 2009/10. As part of Technical, Industrial, Vocational and Educational Training (TIVET) education, youth polytechnics recorded an increase in development budget by 6.7 per cent from KSh 1,383.0 million in 2008/09 to KSh 1,476.1 million in 2009/10. This can be attributed to continued Government funding of model youth polytechnics in all constituencies.

3.10. Number of Educational Institutions: Table 3.4 indicates the trend in the total number of educational institutions in the country between 2005 and 2009. The number of educational institutions rose from 71,753 units in 2008 to 73,0891 units in 2009. Number of Pre-primary institutions increased from 37,954 units in 2008 to 38,247 units in 2009, mainly from the private sector. Both the public and private sector financing realized new schools and hence the total number of primary schools increased by 1.8 per cent to 26,667 in 2009. In 2009, there were 18,543 public schools and 8,124 private schools. Also, the total number of secondary schools in the country rose from 6,566 in 2008 to 6,971 in 2009, representing an increase of 6.2 per cent. The number of primary teacher training colleges increased from 30 in 2005 to 105 in 2009 as a result of enhanced private sector education investments. In 2009, the number of public universities stood at 7 as compared to 24 private universities. The private universities constitute 11 Chartered, 4 Registered and 9 with letters of interim authority. In the year under review, the total number of youth polytechnics increased by 100 increasing the TIVET institutions to 805.

3.11. Pre - Primary Education: The trends in enrolment and number of teachers in Early Childhood Development (ECD) centres for the period 2005 to 2009 is illustrated in Table 3.5. The pre-primary enrolment rose from 1.7 million in 2008 to 1.9 million in 2009, an increase of 11.8 per cent. Figure 3.1 shows that Gross Enrolment Rate (GER) increased from of 59.8 per cent in 2008 to 60.6 per cent in 2009. Over the same period Net Enrolment Rate (NER) rose from 43.0 to 49.0 per cent. The number of teachers increased significantly by 18.8 per cent from 78,230 in 2008 to 92,955 in 2009. The number of trained ECD teachers increased by 23.5 per cent from 57,976 in 2008 to 71,580 in 2009. This is attributed to the increased access to ECD Teacher training colleges. However, due to non-inclusion of funds for ECD grants and teacher support in the Ministry of Education budget estimates, the ECD policy for grants

provision and teacher support was not implemented. The Pupil Teacher Ratio in ECD was estimated at 21: 1 in 2009 compared to 22: 1 in 2008.

3.12. Primary Education: Data on primary school enrolment by standard and sex for the period 2005-2009 is presented in Table 3.6. The year under review marked the seventh year of implementation of Free Primary Education (FPE) with support from Development partners under the Kenya Education Sector Programme. In order to enhance access, more funds were injected into the primary school infrastructure by the Ministry of Education, Constituency Development Fund, Local Authority Transfer Fund and community contribution. The outcome is a rise in classroom capacity in primary schools from 209,000 classrooms in 2008 to 220,000 classrooms in 2009, an increase of 5.3 per cent. The enrolment rose further by 2.3 per cent from 8.6 million pupils in 2008 to 8.8 million in 2009 in primary education for both public and private schools. Figure 3.2 indicates that enrolment in NFE institutions increased

Chapter 3: Social Scene

from 143,409 in 2008 to 163,340 in 2009 with majority enrolled in Nairobi slum areas and the ASAL districts. In 2009, there were 1,345 Non formal schools, a majority teaching the formal primary school curriculum and only a third offering NFE learning curriculum.

Figure 3.2 Non Formal Schools Enrolment, 2004-2005

3.13. As illustrated in Figure 3.3, Gross enrolment Rate (GER¹) increased from 109.8 per cent in 2008 to 110.0 per cent in 2009 while Net Enrolment Rate (NER²) rose marginally from 92.5 per cent to 92.9 per cent over the same period. In terms of gender, the Gross Enrolment Rate (GER) for boys and girls in 2008 was 112.2 per cent and 107.8 per cent respectively as compared to 112.8 percent for boys and 107.2 percent for girls in 2009. The improvement in NER demonstrates that the country is likely to achieve the MDG target for universal primary education by 2015 despite regional disparities. The number of Kenya Certificate of Primary Education (KCPE) candidates rose from 701,900 in 2008 to 727,045 in 2009, an increase of 3.6 per cent. The primary to secondary schools transition rate increased from 59.9 per cent in 2008 to 64.1 per cent in 2009. Analysis of Figure 3.3 indicates that Primary school Completion

¹ GER is total enrolment regardless of age in a given level, expressed as a percentage of eligible official school age population (6-13 yrs)

² NER is enrolment of official age group in a given level expressed as a percentage of eligible official school age population (6-13 yrs)

Rate (PCR³) improved from 79.8 per cent in 2008 to 83.2 per cent in 2009, indicating reduction of wastage in the education system. The Value for Money Audit revealed that majority of the schools had attained an average textbook pupil ratio of 1:2 in 2009 as compared to 1:3 recorded in 2008. In order to streamline grants for provision of teaching and learning materials based on targeting, the Ministry is to implement the findings of the Value for Money Audit report for effective disbursement to all public primary schools.

Figure 3.3: Primary schools Gross Enrolment Rate (GER) and Net Enrolment Rate (NER), 2005-2009

Figure 3.4: Primary to secondary transition rate and Pupil completion rate (PCR), 2005-2009

³ PCR is the total number of pupils graduating at a given level expressed as a percentage of eligible school age population (13 years)

3.14. Primary Teachers: The number of public primary school teachers in the country by qualification and sex for the years 2005 to 2009 is shown in Table 3.7. The total number of teachers increased slightly from 170,059 in 2008 to 171,301 in 2009 mostly attributed to the recruited teachers in 2008 who reported on duty at the beginning of 2009. Male teachers constituted 53.9 per cent of the total primary teacher population in 2009. There were a total of 8,372 teachers who were either on study leave and others on disciplinary cases while 6,063 were performing non teaching duties. Majority of the teachers had P1 qualification constituting 58.0 per cent followed by Approved Teachers at 25.6 per cent within the scheme of service for primary school teachers. Public schools Pupil Teacher Ratio rose marginally from 44:1 in 2008 to 45:1 in 2009.

3.15. Secondary Education: The Government continued with implementation of the Free Secondary Tuition Education which started in 2008 and whose goal is to enhance access to secondary education. The Government, the African Development Bank and the local communities contributed funds towards infrastructure support that realized increase in number of classrooms from 45,345 in 2008 to 47,567 in 2009. The support for infrastructural development increased the number of Form 1 places and hence a rise in primary to secondary schools transition rate from 64.1 per cent in 2008 to 66.9 per cent in 2009. Table 3.8 presents data on secondary school enrolment for the years 2005 to 2009. The total enrolment increased by 9.1 per cent from 1,382,211 students in 2008 to 1,507,546 students in 2009. The GER increased from 42.5 per cent in 2008 to 45.3 per cent in 2009 as shown in Figure 3.5. The Net Enrolment Rate rose from 28.9 per cent in 2008 to 35.8 per cent in 2009. The number of KCSE candidates increased by 13.5 per cent from 297,301 in 2008 to 337,310 in 2009 of whom 182,764 were boys and 154,546 were girls.

3.16. Secondary School Teachers: The number of public secondary school teachers by qualification and sex between 2005 and 2009 is shown in Table 3.9. The total number of public secondary school teachers increased by 11.8 per cent from 43,016 in 2008 to 48,087 in 2009. The increase is attributed to the teachers recruited in 2008 and reported on duty at the beginning of 2009. There was no recruitment of secondary school teachers in 2009 due to the court case involving the Ministry and the teachers' union. Over 99 per cent of the all the teachers in public secondary schools are trained. In 2009 the total number of male teachers was 29,901 as compared to 18,186 female teachers. The Pupils Teacher ratio in public secondary schools rose from 28:1 in 2008 to 30: 1 in 2009. The number of teachers either on study leave and those in disciplinary cases were 4,472 in 2009.

3.17. Teacher Training Institutions: Teacher trainees enrolment by year and gender for the period 2005 to 2009 is presented in Table 3.10. Total teacher trainee enrolment in primary teacher training colleges increased by 8.7 per cent from 24,228 in 2008 to 26,324 in 2009. This is mainly attributed to the increased private sector investment in teacher training colleges. Enrolment in diploma teacher training colleges increased by 10.7 per cent from 1,809 trainees in 2008 to 2,002 trainees in 2009. In 2009, the proportion of female enrolment in P1 and Diploma colleges was 51.3 per cent and 40.3 per cent, respectively.

3.18. Technical, Industrial and Vocational Educational Training (TIVET) Institutions: Enrolment in TIVET institutions for the years 2005 to 2009 is presented in Table 3.11. In 2009, the total enrolment in TIVET institutions was 71,513 as compared to 85,200 in 2008. The lower enrolment was due to upgrading of Kenya Polytechnic University College and Mombasa Polytechnic University College to university college status in 2009. The Youth Polytechnics had the highest enrolment recorded among TIVET institutions at 43.8 per cent followed by Technical training institutes at 31.4 per cent. The current national polytechnics

are Kisumu and Eldoret with a total enrolment of 6,999 students. In 2009, the male student enrolment stood at 50.2 per cent in TIVET institutions with Youth polytechnics having a higher enrolment of female students at 57.8 per cent.

¹Kenya Polytechnic and Mombasa Polytechnic were elevated to University Colleges in 2009

3.19. University Education: Student enrolment in both public and private universities for the years 2005/06 to 2008/09 are presented in Table 3.12. Total enrolment in all the universities rose by 44.7 per cent from 122,847 students in the 2008/09 to 177,735 students in 2009/10 academic year. Enrolment in public universities increased from 100,649 students in the 2008/09 academic year to 142,556 students in 2009/10. In 2009/10, the male and female student enrolment in public universities was 89,611 and 52,945, respectively. Part-time students in public universities constituted 32.0 per cent of the total student enrolment in 2009/10 academic year. Student enrolment in private accredited universities accounted for 19.8 per cent of the total university students enrolled in 2009/10 academic year as compared to 18.1 per cent in 2008/2009 academic year.

3.20. The public universities student intake through the Joint Admissions Board (JAB) increased by 23.4 per cent from 17,100 in 2008/09 to 21,100 in 2009/10 academic year. The increase in intake was attributed to establishment of constituent colleges which significantly increased access to university education. The proportion of female student enrolment in university education declined from 40.1 per cent in 2008/2009 to 37.9 per cent in 2009/2010. In order to enhance female enrolments JAB has an affirmative policy of admitting female students with a point lower than their male counterpart. However, the gender disparity in university education enrolment remains high with a gender parity index of 0.61 based on student enrolment.

3.21. Commission for Higher Education (CHE): The Commission assures quality, ensures increased access and equity and coordinates research in higher education in Kenya. The number of chartered private universities increased from 7 in 2006/07 to 11 in 2008/09, shown in Table 3.13. During the period 2006/07 to 2008/09 a total of 14 constituent colleges and 3 campuses for public universities were established, 5 private universities were given Letters of Interim Authority, 4 were fully accredited (chartered), and 11 post secondary school institutions were granted authority to collaborate with universities to offer specific university programmes.

Table 3.13: Registration of universities and degree offering Institutions

Category of Institutions	Number	
	2006/07	2008/09
Chartered private universities	7	11
Universities with letter of Interim Authority	4	9
Registered universities	5	4
Institutions approved for collaboration with universities in offering university programmes	18	29
Public universities	6	7

3.22. The number of approved degree programmes and validated diplomas is presented in Table 3.14. As at 2008/09, the Commission for Higher Education had approved 82 degree programmes for private universities, granted authority to collaborate for 46 university programmes and validated 105 diploma programmes for post secondary school institutions. The Commission also facilitates development projects in the universities depending on the available funding levels. In 2006/07, the Commission disbursed to universities a total of KSh 65 million for 21 projects and Ksh 75 million for 23 projects in 2007/2008. The objective of financing the projects is to enhance universities research capabilities and staff development.

Table 3.14: Approved degree programmes and validated diploma programmes as at 2007 and 2009

Vital Statistics 3.23. Civil registration, sometimes referred to as births and deaths registration system, is the recording of vital events under statutory provisions on continuous and permanent basis. The registration records are useful as legal documents and source of data for planning, monitoring, evaluation and implementation of programmes by various stakeholders while for individuals, it is a proof of age, identity, nationality, heritage and civil status.

3.24. Table 3.15 represents registration of births and deaths from 2005 to 2009. The number of births reported reduced by 2.3 per cent from 680,112 in 2008 to 664,716 in 2009. Similarly, the number of deaths recorded reduced by 4.8 per cent from 199,567 in 2008 to 189,985 in 2009. The number of births reported in Rift Valley increased by 8.2 per cent followed by Nairobi (7.6 per cent) and North Eastern (2.1 per cent) while that of deaths increased by 47.2 per cent in North Eastern and 7.0 per cent in Nairobi. Major reductions in birth reports were recorded in Coast (20.3 per cent) and Western (9.5 per cent). The

data further reveals reductions in deaths in Nyanza (15.7 per cent), Western (11.4 per cent) and Coast (10.9 per cent). In order to improve registration coverage rates⁴, the department of civil registration has mobilized sensitization activities in arid and semi arid lands districts that have low registration rates as compared to the major urban centers in the country.

4. Coverage rate is the registered births/deaths against the expected births/deaths. Where expected births/deaths is the total population multiplied by crude birth rates / crude death rates respectively.

Numbers

3.25. Vital statistics generated through civil registration systems are a major source of continuous monitoring of births and deaths over time. Table 3.16 shows the coverage rates of births and deaths by province from 2005 to 2009. Nairobi province recorded minimal improvement in registration of births from 85.4 per cent in 2008 to 85.6 per cent in 2009 while other provinces recorded a drop during the period under review. North Eastern province recorded the lowest registration of births at 25.3 per cent in 2009. On the other hand, all other provinces recorded declines in death registration during the same period apart from North Eastern province which recorded an increase in death registration of 10.7 per cent in 2009, up from 6.3 per cent in 2008. The data also shows that Nairobi province leads other provinces in recording both births and deaths at 85.6 and 75.0 per cent respectively in 2009. Most of the improvement in the coverage rate in the provinces is attributed to social mobilization workshops held in 2009.

Table 3.16: Coverage Rates of Births and Deaths by Province, 2005 – 2009

PROVINCE	2005		2006		2007		2008		2009*

Health Statistics 3.26. The Government continues to give high priority to the improvement of the health status of the population which is a prerequisite to socio-economic development. The number of health institutions by province from 2005 to 2009 is presented in Table 3.17. Health facilities increased significantly by 8.2 per cent from 6,190 in 2008 to 6,696 in 2009. Most of these health facilities continue to be financed through the Constituency Development Fund (CDF). Rift valley province has the largest number of health facilities with slightly over a quarter of the country's total health facilities (25.9 per cent) followed by Central Province (18.7 per cent). North Eastern Province has the least proportion of health facilities, accounting for only 3.5 per cent.

Table 3.17: Number of Health Institutions¹ by Province, 2005 - 2009

3.27. The National Hospital Insurance Fund (NHIF) is mandated to facilitate access to quality and affordable health care services. Consequently, NHIF collects contributions from individuals and pays hospital benefits to its members and their declared dependants. NHIF resources for the financial year 2004/05 to 2008/09 are shown in Table 3.18 (a). Total receipts maintained an upward trend increasing by 11.7 per cent from KSh 4,811.3 million in 2007/08 to KSh 5,374.0 million in 2008/09. Similarly, benefits accrued to members rose by 36.9 per cent to KSh 2,813.0 million in 2008/09. However, Contribution Net of Benefits declined by 7.1 per cent from KSh 2,757.2 million in 2007/08 to KSh 2,561.2 million in 2008/09.

Table 3.18 (a): National Hospital Insurance Fund Resources, 2004/05-2008/09

3.28. Total registered members grew by 10.8 per cent from 2,076,496 in 2007/08 to 2,300,251 in 2008/09 as shown in Table 3.18(b). In 2008/09, registered membership in both formal and informal sectors rose by 8.4 per cent and 25.0 per cent to 1,923,851 and 376,420 respectively. The informal sector, which has almost quadrupled since the financial year 2005/06, accounted for 16.4 per cent of the total registered membership in 2008/09.

3.29. Table 3.19 presents the number of registered medical personnel and those in training for the years 2008 and 2009. The total number of registered medical personnel increased by 4.7 per cent from 76,883 in 2008 to 80,464 in 2009. However, personnel undergoing training decreased by 17.1 per cent to 7,397 in 2009/10 compared to 8,925 in 2008/09. With the exception of enrolled nurses and public health technicians, there was an increase in number of personnel in all the other categories of registered medical personnel. The number per 100,000 increased slightly for registered nurses and clinical officers to 40 and 15 respectively. However, the ratio decreased for enrolled nurses and public health technicians while it remained constant for other personnel.

3.30. The number of undergraduates and post-graduate medical students by course and gender between 2005/06 and 2009/10 is shown in Table 3.20. The number of students enrolled increased by 3.7 per cent from 4,704 in 2008/09 to 4,877 in 2009/10. About 46 per cent of the total registered medical students were enrolled in Bachelor of Science in

medicine and surgery. Except for the Bachelor of Science in Nursing, all the other courses registered more males than females. Post graduate courses accounted for 12.0 per cent of medical students enrolled.

3.31. Table 3.21 shows the number of middle level trainees in public medical training colleges from 2005 to 2009. Total trainees enrolment in Kenya Medical Training College (KMTC) decreased by 12.1 per cent from 6,090 in 2008 to 5,356 in 2009. This is attributed to the recession experienced in the year under review, reduction in government full-time scholarship , stiff competition from private colleges, preference of diploma holders to undertake degree courses instead of higher diploma and delayed KMTC intake for september 2009. Diploma courses accounts for 85.1 per cent of all the courses offered. Diploma in community health nursing had the highest number of trainees followed by diploma in clinical medicine and surgery.

3.33. The incidence of diseases causing morbidity is presented in Table 3.23. The number of cases recorded increased from 28.4 million in 2008 to 32.0 million in 2009. Malaria and diseases of respiratory system combined constituted 56.0 per cent of all morbidity cases reported in 2009.

Table 3.23: Incidence of Diseases Causing Morbidity in Kenya, 2005 - 2009

Other Social Services 3.34. **National Youth Service (NYS):** The institution trains the youth in vocational skills. Table 3.24 gives details of recruitment of service men and women from 2005 to 2009. The number of service men and women recruited went down by 24.7 and 43.9 per cent respectively, reflecting an overall decrease of 29.6 per cent. Income earned also went down by 57.2 per cent which can be attributed to decrease in number of servicemen and servicewomen recruited.

Table 3.24: National Youth Services Recruitment and Allowances, 2005-2009

3.35. **National Social Security Fund (NSSF):** The Fund serves as key pillar of the social security for workers. It is an indispensable part of the government social policy and an important safety net, especially during old age. The NSSF registers eligible members and collects monthly contributions, invests on behalf of its members and effects payments when due. As shown in Table 3.25, the number of registered employers increased by 18.2 per cent while that of employees went up by 7.1 per cent. Annual benefits increased by 7.7 per cent and annual contribution decreased by 0.5 per cent.

3.36. **Adult Education:** Education plays a fundamental role in socio-economic development and poverty alleviation. Adult education is designed to provide and enhance the literacy levels of the illiterate population. Efforts have been made to improve literacy levels through development and improvement of adult literacy and non-formal programmes. Table 3.26 gives details of enrolment of adult learners by province and gender. The enrolment of adult learners increased by 38.8 per cent between 2008 and 2009. Eastern province recorded the highest adult learners of 66,237 followed by Rift Valley Province with 55,597. Female still out number male adult learners in all the provinces except North Eastern province. Low female enrolment for literacy classes in North Eastern province is attributed to traditional practices that affect female adult learners adversely.

3.37. Table 3.27 gives details of adult learners who passed literacy proficiency test by province and gender. At the national level, there was an increase of 16.8 per cent of adult learners who passed the proficiency test between 2008 and 2009. Eastern province recorded the highest number of proficiency graduates of 5,092 while Nairobi province had the least number of 333 adult learners passed literacy proficiency test.

3.39. Gender and Development: The Government is determined to mainstream gender into government policies, plan, budgets and programmes as one way of realizing the aspirations of Vision 2030 goals. The Government will increase the participation of women through affirmative action of at least 30 per cent representation in all economic, social and political decision-making processes and platforms as well as through economic empowerment. Some of the initiatives on gender mainstreaming put in place by the government include appointment of gender officers in all ministries and state corporations, and development of gender policies to address emerging gender issues. A number of ministries have developed gender policy documents for example policy in education, agriculture among others.

3.40. Women groups represent the primary decision-making outlets for women in Kenya and for socio-economic development. Table 3.29 shows the number of registered women groups, membership, contributions, Government Grants and Women Enterprise Funds. The number of registered women groups increased by 1,078 from 140,482 in 2008 to 141,560 in 2009. There was a slight increase in membership groups from 5,484,275 in 2008 to 5,516,396 in 2009. Women groups' contributions went up from KSh 547.3 million in 2008 to KSh 548.4 million in 2009. Government grants increased from KSh 80.0 million in 2008 to KSh 100.0 million in 2009. This increase is attributed to the large number of registered women groups coupled with big demand for grants and increased awareness creation by the Department of Gender and Social Development.

3.41. Women Enterprise Fund: The Fund was gazetted in August 2007 to provide alternative financial services to women who are excluded from the formal and informal financial sectors and commenced operation in 2008. The fund provides accessible and affordable credit to support women to start and/or expand business for wealth and employment creation. In addition to the fund being a flagship project in vision 2030, it is also a demonstration of the government's commitment to the realization of the third Millennium Development Goal (MDG) on gender equality and women empowerment. The Government set aside KSh 500 million in the 2009/10 compared to KSh 315 million in the 2008/09 for Women Enterprise Fund. Each constituency was initially allocated KSh1.0 million which was enhanced by an additional KSh1.0 million with effect from 1st July, 2009, making the total amount available to be KSh 2.0 million. Since its inception the fund has benefited over 166,610 individual women, who have invested the funds in wholesale and retail trade, poultry, dairy farming, hair salons and basket weaving, transports and communications.

3.42. The Government through the Ministry of Gender, Children and Social Development has developed a framework of transferring monthly stipend to the poor and vulnerable households with older citizen of 65 years and above in 44 districts on a pilot basis, under the social protection programme. The other social protection interventions in the ministry include the OVC cash transfer and the urban informal settlements targeted food subsidy.

3.43. **Social Protection Fund (SPF):** The Fund was established for older persons to facilitate access to credit and cash transfer on flexible terms. Table 3.30 shows that the government increased the allocated fund from KSh 4.0 million in 2008/09 to KSh 550.0 million in 2009/10. The direct cash disbursement increased from KSh 3.6 million in 2008/09 to KSh 346.0 million in 2009/10.

3.44. **Cash transfer for Orphans and Vulnerable Children (OVC):** This programme was started in 2004 in response to the strong need to protect and assist the highly vulnerable children and strengthen the capacity of the households to care for OVC within their families and communities. The programme also aims to enhance caretaker's/ guardian's knowledge through training on issues such as nutrition and health care practices as well as improve civil registration for OVC and caregivers. The money is currently directed to the poor households taking care of the OVC. The transfer is expected to improve the monthly income of the targeted households with the specific objective of promoting improved health and education outcomes for OVC. The programme started on a piloted basis targeting 500 OVCs receiving KSh 500 per month. The allocation for OVC increased by 40.8 per cent from KSh 579.0 million in 2008/09 to KSh 815.0 million in 2009/10. Direct cash disbursement increased by 41.5 per cent from KSh 546.0 million in 2008/09 to KSh 772.8 million in 2009/10.

3.45. **Decision-making:** Progress in women representation is notable through an increase in key decision making positions with the tenth parliament having the highest number of women representation. The number of women ministers in cabinet increased from 2 in June 2006 to 6 in June 2009. Similarly, the number of permanent secretaries increased from 5 in 2006 to 7 in 2009, Women members of National Assembly increased by 22.2 per cent from 18 in 2006 to 22 in 2009 as shown in Table 3.31. However, there has been only a marginal increase in the appointment of women to decision-making positions and hence, the official target of 30 per cent representation of women is yet to be attained.

Chapter 4

Employment, Earnings and Consumer Prices

Overview

Analysis of the performance of the labour market excluding small scale agriculture and pastoralist activities indicates that most sectors recorded positive growths in 2009. This is attributed to favourable business environment, availability of credit from financial institutions and increase in investment opportunities in the country. As a result, the total number of new jobs recorded for both the formal and informal sectors stood at 445.9 thousand jobs with the modern sector contributing 55.5 thousand. The average annual inflation rate over the same period stood at 9.2 from 16.2 per cent recorded in 2008. Average nominal earnings per employee went up by 4.0 per cent in 2009, which was lower than the increase of 5.8 per cent recorded in 2008. There was a decline in real average earnings by 4.2 per cent, which was an improvement compared to the decrease of 10.2 per cent registered the previous year.

Employment 4.2. Total employment excluding rural small scale agriculture and pastoralist activities stood at 10,399.5 thousand in 2009 up from 9,953.6 thousand registered in 2008, as shown in Table 4.1. A total of 55.4 thousand new jobs were created in the modern sector (wage employment) in the year under review. These were mainly attributed to growths in the communications sector and expansion of financial services network in the country. Wage employment in the modern sector went up by 2.8 per cent in 2009 compared to 1.8 per cent recorded in 2008. Similarly, the informal sector created 390.4 thousand new jobs compared to 440.7 thousand in 2008, constituting 87.6 per cent of all the new jobs created. The decline was attributed to improved school enrolment and transition rates. The level of employment under the self employed and unpaid family workers' category continued to account for an insignificant share of all jobs within the modern sector.

4.4. Private Sector: During the period under review, the share of private sector employment in total wage employment stood at 67.3 per cent. The leading economic activities providing wage employment in the private sector were community, social and personal services; agriculture and forestry; and manufacturing, with contributions of 23.8, 21.4 and 17.7 per cent, respectively. The building and construction industry registered the highest growth in employment by posting a growth of 13.3 per cent. This was attributed to the continued Government funding of roads construction during the year and the thriving private sector real estate construction. Employment creation in the manufacturing industry registered a marginal growth compared to a decline of 0.3 per cent in 2008. The agriculture and forestry industry registered a negative growth in employment during the year due to the poor performance of the sector following prolonged drought. Similarly, employment declined in the mining and quarrying sector despite an expansion in the stone quarrying, clay and sand pits sub-sector.

4.5. Public Sector: Most economic activities in the public sector registered positive growths in employment except mining and quarrying and building and construction, which remained at about the same levels as in the previous year. Wholesale and retail trade, restaurants and hotels recorded the highest increase of 5.0 per cent, followed by transport and communications, which registered a 4.1 per cent increase in employment in 2009.

4.6. The trend of new jobs created in the modern sector for the period 2005 to 2009 is presented in Figure 4.1. The economy is on a recovery path from the sharp decline witnessed in 2008, with the private sector creating 39.9 thousand new jobs in the modern sector wage employment. The rate of attrition in the public sector was higher than recruitment in the few years prior to 2008, depicting a negative in the number of new jobs but, the trend is reversed from 2008.

Figure 4.1: New Wage Employment in the Modern Sector, 2005 - 2009

4.7. Details of the wage employment in the public sector by employer are presented in Table 4.3. The public sector continued to recruit during the year to fill positions available due to newly created establishments and those falling vacant due to natural attrition. Growth in employment in the Central Government stood at 1.9 per cent compared 2.4 per cent recorded in 2008. Employment by the Teachers Service Commission (TSC), which is the largest public sector employer, went up by 3.6 per cent, the highest growth in the last five years. The Local Authorities registered the least growth of 0.3 per cent in employment in the public sector.

³ Refers to institutions where the Government has over 50 per cent shares but does not wholly own them.

4.8. Distribution of wage employment in the modern sector by Province is presented in Table 4.4. In 2009, Nairobi Province, which commands the largest share of modern sector wage employment, registered the highest increase (13.8 thousand) in wage employment followed by Rift Valley with 12.4 thousand. Overall, wage employment in all the Provinces went up by about the same rate.

4.9. Wage employment in major towns for six urban-based industries for the years 2004 and 2009 is presented in Table 4.5. Over the last five years, an estimated 151.1 thousand jobs were generated in the urban areas giving an overall increase of 15.5 per cent. Over the period, Nairobi had the highest wage employment among the major towns, contributing over 40 per cent of the jobs. High growths in wage employment were recorded in the transport and communications; construction; and wholesale and retail trade and hotels and restaurants, in that order. In absolute terms, the highest increase in wage employment was registered in community, social and personal services sector. Manufacturing, on the other hand, recorded the lowest growth in percentage terms. Other towns are expanding job opportunities in almost all urban-based industries.

¹ Urban centres refer to towns which had a population of 2000 or more persons in 1989.

4.10. Table 4.6 presents details of wage employment by industry and sex. Wage employment for males went up by 36.5 per cent to account for a share of 69.6 per cent of total wage employment. The number of females in wage employment rose from 589.0 thousand in 2008 to 607.9 thousand in 2009, with their share in the total remaining almost at the 2008 level. Educational services followed by agricultural and forestry remained the major female employers. Majority of females employed in the modern sector (55.5 per cent) were working in the community,

social and personal services in 2009. Further analysis of employment status shows that there were 395.1 thousand female regular employees in the year under review. Overall, the increase in females in casual employment stood at 6.0 per cent while regular employment went up by 1.8 per cent relative to the previous year. On the other hand, the male casual proportion to total male wage employment declined slightly to 41.1 per cent in 2009.

Wage Earnings in the Modern Sector

4.11. Analysis of total wage payments by industry and sector for the period 2008 to 2009 is shown in Table 4.7. The nominal wage bill went up from KSh 707,371.3 million in 2008 to KSh 761,565.4 million in 2009, translating into the same percentage change as that registered in 2008 (7.7 per cent). The private sector wage bill went up by 7.4 per cent from KSh 481,945.9 million in 2008 to KSh 517,732.6 million in 2009, while that of public sector went up by 8.2 per cent. This increase in the total wage payment in the public sector is lower than the rise of 11.0 per cent recorded between 2007 and 2008. Wage payments in the private sector went up by between 3.3 per cent in the agriculture and forestry and 13.8 per cent in the building and construction. Overall, the public sector accounted for 32.0 per cent of the total wage bill in the modern sector in 2009.

4.12. A summary of wage payments in the public sector by type of employer is presented in Table 4.8. Total wage bill for Central Government increased by 14.1 per cent from KSh 50,741.6 million in 2008 to KSh 57,891.3 million in 2009. This was mainly as a result of annual salary increments and the slight increase in employment in the civil service. The TSC wage bill rose by 3.2 per cent to KSh 79,699.6 million, and accounted for the largest share of public sector wage bill in 2009. The combined share of the Central Government and TSC wage bill in the total public sector wage bill accounted for 56.4 per cent of the total wage bill.

Table 4.8: Total Wage Payments in the Public Sector¹, 2005 – 2009

¹ Refers to position as at 30th June, but the June figures are annualised by multiplying by 12 for earnings

² Refers to Government wholly-owned corporations

³ Refers to institutions where the Government has over 50 per cent shareholding but does not fully own them

4.13. As shown in Table 4.9, total wage earnings per employee rose by 4.0 per cent from KSh 363,900.1 in 2008 to KSh 378,349.6 per annum in 2009. Annual average earnings in the private sector increased from KSh 369,068.7 in 2008 to KSh 384,721.6 in 2009, an increase of 4.2 per cent. Average earnings per person remained higher in the private sector compared with that of the public sector, though the gap is narrowing. This is as a result of improvement of remuneration for public servants with a view to harmonising with their counterparts in the private sector. In the private sector, average earnings in the finance, insurance, real estate and business services were the highest, at more than double the national average. On the other hand, workers in agriculture and forestry, mining and quarrying and manufacturing had average earnings lower than the national average.

¹ Refers to position as at 30th June, but the June figures are annualised by multiplying by 12 for earnings.

² Refers to Government wholly-owned corporations.

4.14. Annual average earnings in the public sector rose by 5.6 per cent in 2009 compared to the 4.2 per cent increase for the private sector. In the public sector, annual average earnings for employees in Central Government registered the highest increase of 11.9 per cent while those

Chapter 4: Employment, Earnings and Consumer Prices

for Parastatal bodies and Majority control by the public sector went up by 7.3 per cent. Average earnings for employees of TSC, on the other hand, are reflected as having declined marginally. However, it is worth noting that the total earnings used to compute the average earnings are derive from the Integrated Personnel Payroll Database (IPPD) system which excludes some payments paid to the employees of the TSC. Previously the earnings used were derived from Government payroll system, which captured all payments.

¹ Refers to position as at 30th June, but the June figures are annualised by multiplying by 12 for earnings.

² Refers to Government wholly-owned corporations.

³ Refers to institutions where the Government has over 50 per cent shareholding but does not fully own them.

4.15. Table 4.10 presents percentage changes in wage employment and average earnings for the period 2004 to 2009. During the five-year period, total employment rose by 13.3 per cent, with wage employment in the private sector rising by 21.5 per cent compared to a decline of 0.6 per cent in the public sector. The Central Government and TSC are the only public sector employers that recorded positive growths in wage employment, registering 3.3 and 4.6 per cent, respectively. The highest growth in employment over the five year period in the private

sector was recorded in the transport and communication industry.

4.16. Annual average earnings in the country rose by 36.7 per cent over the five-year period with private sector average earnings rising by 32.4 per cent. Earnings in the public sector have gone up by 47.5 per cent in the period under review. Private sector employees in the trade, restaurants and hotels industry registered a negative growth of 2.9 per cent in average earnings in 2009 while those in the building and construction industry recorded a marginal growth. Over the period 2004 to 2009, Local Government employees had the highest increase in average earnings in the public sector.

4.17. Real average earnings per employee by sector and industry are shown in Table 4.11 while percentage changes are shown Table 4.12. Average real earnings dropped by 4.2 per cent from KSh 156,311.8 per annum in 2008 to KSh 149,694.7 per annum in 2009. Real earnings for private and public sector declined by 4.0 and 2.7 per cent, respectively, relative to their 2008 levels. Mining and quarrying was the only industry in the private sector that recorded a positive change in the value of real earnings in the period under review. Real average earnings for all employers in the public sector registered declines, except for Central Government whose real earnings increased by 3.1 per cent over the period.

Informal Sector 4.18. The informal sector in Kenya is defined to cover all small-scale activities that are semi-organised, unregulated and use low and simple technologies. The sector has been playing a central role in the economy with its activities growing over the years. The activities are mainly in the manufacturing, building and construction, distributive trades, transport and communication, and community and personal services industries. The policy challenge for the sector is to create an enabling environment that would enhance profitability and competitiveness in order to graduate into the modern sector.

4.19. As shown in Table 4.13, an estimated 8,332.5 thousand persons were engaged in informal sector economic activities in 2009, an increase of 4.9 per cent from the 2008 level. The growth in employment in the sector has been decelerating over the five year period, though it has provided the necessary employment interface between modern sector and small-scale farming and pastoralist activities. The ease of entry into the sector has made it a fall back opening for those leaving training institutions as they await to join the modern sector and those exiting from the modern sector. The slowing down of the sector is attributed to increased enrolment levels in the education and training institutions. In addition, the demographic transition also reduced the rate of growth of the age group cohort entering the job market and therefore likely entrants to the informal economy. Nairobi Province still commands the largest share in informal sector employment, at 24.3 per cent followed by Rift Valley and Central Provinces with 18.9 and 15.8 per cent in that order.

4.20. Distribution of the informal sector employment by industry is presented in Table 4.14. Employment was highest in the wholesale and retail trades, hotels and restaurants industry, which absorbed 59.1 per cent of total persons employed in the sector followed by manufacturing with 21.1 per cent. Building and construction registered the highest increase in informal employment from 211.4 thousand in 2008 to 230.0 thousand in 2009, an increase of 8.8 per cent.

Developments in the Labour Market

Wage Award and Registered Collective Bargaining Agreements

4.21. The National Incomes Policy (NIP) has been a useful instrument in promoting sustainable industrial harmony between employers and employees. Its objectives are to assure wage earners a reasonable share of the national income, promote a harmonious and just relationship between employers and workers, and be responsive to the demands of the economy, among others. The minimum wages are the key elements of wage policies. Along with other measures of economic and social policy, minimum wages aim at setting standards to: prevent the exploitation of workers by employers; promote a fair wage structure; provide minimum acceptable standards of living for low paid workers and help in achieving income redistribution to alleviate poverty, especially among working families.

4.22. On Labour Day 2009, the Government announced new statutory minimum wage rates that reflected a 20.0 per cent increase in the wages specified in the Regulation of Wages Agriculture Order, 2009 and 18.0 per cent for wages under the Regulation of Wages General Order, 2009. Prior to these new minimum wages, the last review was done in 2006.

4.23. Gazetted Monthly Basic Minimum Wages for the Agricultural Industry are presented in Table 4.15. The lowest paid category of workers, unskilled employees, had their wages raised from KSh 2,536 in 2008 to KSh 3,043 in 2009. Wages for the highest paid categories of workers: farm foreman and farm clerks was increased from KSh 4,573 in 2008 to KSh 5,488 in 2009.

Table 4.15: Gazetted Monthly Basic Minimum Wages for Agricultural Industry, 2005 – 2009

4.24. As presented in Table 4.16, the average gazetted monthly basic minimum wages in Nairobi, Mombasa and Kisumu cities rose from KSh 8,171 in 2008 to KSh 9,641 in 2009. In other municipalities the average basic minimum monthly wages was increased from KSh 7,578 to KSh 8,942 in 2008 and 2009, respectively. Similarly, in all other towns rose from KSh 6,447 to KSh 7,607 over the same period. Notably, with the implementation of the final phase of harmonised Civil Service salaries in 2008, salary increase for civil servants was mainly due to the normal annual increments.

4.25. Collective bargaining is an important mechanism for wage determination. The Industrial Court has jurisdiction to arbitrate and register collective bargaining agreements negotiated between employers' and workers' representatives in order to improve terms and conditions of employment. Table 4.17 shows the number of collective bargaining agreements registered by the Industrial Court in 2008 and 2009. The number of agreements registered increased by 27 to 324 in 2009. The agreements registered reflected an average monthly wage of KSh 18,893.40 compared to KSh 14,621.60 in 2008. The monthly house allowance on average was KSh 3,219.30 in 2009, a slight increase from KSh 3,138.00 in the previous year. The number of unionisable employees covered by the agreements registered in 2009 was 83,907 of which 33.4 per cent were in Finance, Insurance, Real Estate, and Business service economic activity sector.

Chapter 4: Employment, Earnings and Consumer Prices

Consumer Price Index 4.26. The overall annual inflation, calculated as a percentage change in the geometric Consumer Price Index (CPI) over two consecutive 12 month period, decreased from 16.2 per cent in 2008 to 9.2 per cent in 2009. This decline was mainly caused by a reversal of slowed economic activities attributed to the aftermath of the 2007 post election violence, inadequate rains, rising oil prices and the global high food prices that were witnessed in the year 2008. In addition, the year 2009 was characterised by a reduction of crude oil prices in the world market and prudent macroeconomic policy management.

4.27. Table 4.18 shows annual inflation rates for the different income groups over the last five years. Inflationary pressures in the Nairobi lower income group eased up the most by recording a drop from 17.9 per cent in 2008 to 8.2 per cent in 2009. Nairobi Upper/Middle income groups and the rest of urban areas registered declines in their inflation rates, albeit at lower rates.

Table 4.18: Annual Inflation Rates 2005-2009

Income Group	Per cent				
	2005	2006	2007	2008	2009
Nairobi Lower Income Inflation.....	11.4	8.7	4.0	17.9	8.2
Nairobi Middle/Upper Income Inflation ...	8.3	4.8	4.1	10.9	7.9
Nairobi Inflation	10.8	8.0	4.0	16.7	8.2
Rest of Urban Towns Inflation ...	9.3	5.4	4.4	15.9	10.0
Kenya Inflation Rate	10.0	6.0	4.3	16.2	9.2

Notes

I The Nairobi composite index is weighted as 0.8 for lower income group and 0.2 for middle/upper income group while Kenya composite index is weighted as 0.399 for Nairobi and 0.601 for rest of Urban Towns.

II The lower income group comprises households with monthly expenditure below KSh 10,000 in October 1997

III The middle/upper income group comprises households with monthly expenditure above KSh 10,000 in October 1997

4.28. Tables 4.19, 4.20, 4.21, 4.22 and 4.23 show a five year series of the CPI for the Nairobi lower, middle/upper, Nairobi combined, rest of urban areas and the national indices (Kenya), respectively.

4.29. The annual average CPI for Nairobi lower income group rose from 244.53 in 2008 to 264.62 in 2009, recording an annual inflation of 8.2 per cent. The highest index of 271.01 was recorded in March while the lowest index of 258.78 was in July 2009.

4.30. The annual average CPI for the Nairobi middle/upper income groups rose from 190.25 in 2008 and 205.20 in 2009, translating to an annual inflation of 7.9 per cent. The monthly CPI for this income group in 2009 ranged from 198.75 to 209.57, the latter being recorded in the month of April.

4.31. Annual average CPI by broad commodity groups and their corresponding inflation rates are shown in Table 4.24 and Figure 4.2, respectively. The annual average CPI for food and non-alcoholic drinks increased from 283.66 in 2008 to 319.45 in 2009. This translates to an annual food inflation of 12.6 per cent, which was the highest among the broad item groups. The rise in food inflation was mainly due to increases in the prices of maize flour, sugar and beef with bones. The three items collectively accounted for over 10 per cent of food and non-alcoholic drinks expenditure in the review period. The average cost of a 2 Kg packet of maize flour rose by 24.6 per cent, from KSh 70.47 in 2008 to KSh 87.78 in 2009. Sugar prices on the other hand went up by 22.6 per cent from an annual average of KSh 70.60 per Kg in 2008 to KSh 86.59 in 2009 while the price of beef rose by 13.5 per cent from an average of KSh 202.81 per Kg to KSh 230.11. On the other hand, fuel and power index declined by 3.8 per cent mainly

due to reduction in the prices of diesel, paraffin and petrol by 21.2, 17.6 and 15.1 per cent, respectively in 2009. All the broad commodity groupings except Fuel and Power recorded significant increases in their respective price indices.

Table 4.24: CPI and Inflation by Commodities 2008 and 2009

Figure 4.2: Inflation Rates by Broad Commodity Groups, 2009

Chapter 5

Money, Banking and Finance

Overview The Monetary Policy in 2009 remained focused on achieving and maintaining price stability within a single digit inflation rate of 5.0 per cent. The Central Bank of Kenya (CBK) sought to control inflation by limiting growth of broad money supply (the intermediate target) through daily management of reserve money. In the year under review, the Monetary Policy Committee (MPC) reviewed the Central Bank Rate (CBR) four times to finally stand at 7.00 per cent in November 2009 from 8.50 per cent in December 2008. Minimum cash ratio requirement was reviewed downwards from 6.00 per cent in December 2008 to 5.00 per cent and 4.50 per cent in January and July 2009, respectively. The actual average cash ratio maintained by commercial banks rose from 5.57 per cent in December 2008 to 5.96 per cent in December 2009. In the year under review, the minimum liquidity ratio requirement remained at 20.0 per cent. However, banks maintained an average liquidity that was above 40.0 per cent. The 91-day Treasury bill interest rate fell by 1.77 percentage points while the interbank interest rate dropped 3.72 percentage points.

Monetary Indicators and Aggregates 5.2. Monetary indicators are presented in Table 5.1. In 2009, Net foreign assets (NFA) increased to KSh 279.7 billion in June 2009, only to drop to KSh 245.4 billion in December 2009. The drop in NFA in December followed the slowdown in foreign exchange build up by the CBK and the use of the existing foreign exchange reserves to meet external obligations. Growth in domestic credit to private sector (including other public sectors) slowed down to 14.3 per cent in December 2009 compared to 24.5 per cent in December 2008. Domestic credit to Central Government grew by 34.2 per cent to KSh 218.5 billion in December 2009. The increase in total domestic credit (private and Government) led to a 16.0 per cent expansion in broad money supply (M3). Commercial bank's liquidity remained stable at an average ratio of 41.5 per cent during the year in review. The year end values for advances to deposits ratio declined to 71.0 per cent in 2009 from 73.0 per cent in 2008.

5.3. Table 5.2 presents various monetary aggregates. Narrow money supply (M1) grew to KSh 442.2 billion in 2009 compared to KSh 392.8 billion in 2008. Quasi money deposits of commercial banks and Non Bank Financial Institutions (NBFIs) increased by 21.8 per cent and 27.1 per cent, respectively in the review period. This led to a 17.2 per cent growth in money supply (M2). Broad money supply (M3) grew at the targeted rate of 16.0 per cent in 2009. Overall liquidity (L) expanded by 17.3 per cent due to increase in holding of Treasury bills by commercial banks.

Consolidated Accounts of the Banking System

5.4. Table 5.3 shows the assets and liabilities of the banking system. The assets and liabilities expanded by 12.5 per cent to KSh 1,223.7 billion in 2009. Contributing to the increase in assets were demand deposit liabilities which grew by 14.2 per cent to KSh 341.3 billion while currency outside banks expanded by 7.6 per cent. Quasi monetary deposit liabilities expanded significantly by 21.8 per cent to KSh 438.8 billion as residents' foreign currency deposits increased by KSh 12.9 billion, as at the end of December 2009. During the period in review, Treasury bill holdings by the commercial banks increased by 23.0 per cent compared to a 1.6 per cent decline recorded in December 2008. The increase resulted from Government's efforts to bridge the budgetary deficit occasioned by increased expenditure on famine relief and infrastructure development through the economic stimulus package. This is reflected in domestic credit to Central Government which grew substantially by 34.2 per cent in December 2009. However, credit to private sector decelerated from 25.7 per cent in 2008 to 14.5 per cent in December 2009. Net foreign assets declined by KSh 15.1 billion, a 5.8 per cent drop, compared to a growth of 1.5 per cent recorded in 2008.

Notes:

(a) Broad Money, M2, is money supplied by the Central Bank, Commercial Banks and NBFIs.

The items include currency outside banking institutions, deposits held by non-banking institutions with Central Bank, all deposits as well as certificates of deposits held by the private and other public sectors with banking institutions.

Excluded are Central Government, Local Government and Non-residents deposits with banking institutions.

(b) Broad Money, M3, comprises M2 and foreign currency holdings by residents.

(c) Broad Money, L, comprises M3 and Treasury Bill holdings by the non-bank public.

(d) Other Items Net Includes SDR allocated by IMF.

(e) Net Foreign Assets includes Government reserve position in the IMF and deposits with crown agents.

(f) Treasury Bill holdings by the non-bank public is not included in total liabilities of the banking system.

Sources of Changes in M3 and Real Values of Selected Financial Aggregates

5.5. Changes in broad money supply (M3) and the sources of change for the period 2005-2009 are shown in Table 5.4. During 2009, the growth in M3 comprised of increases of KSh 49.5 billion in currency in circulation and demand deposits, KSh 78.5 billion in time and saving deposits with commercial banks and KSh 3.7 billion deposits with non-bank financial institutions. The main source of change in M3 was total domestic credit that expanded by KSh 150.9 billion attributed to credit to private sector.

¹Compares year-end values

5.6. Trends in real values of selected financial aggregates at 1997 constant prices are presented in Table 5.5. Money supply M3 expanded in real terms by 10.2 per cent in December 2009, compared to 2008 where a decline of 1.6 per cent was recorded while overall liquidity expanded by 19.0 per cent to stand at KSh 501.0 billion. Commercial banks' credit to private sector grew in real terms by 9.5 per cent in December 2009 decelerating 0.9 percentage points from the growth in 2008. However, overall credit by commercial banks declined by 19.3 per cent to reach KSh 223.0 billion in 2009. Deposit liabilities of commercial banks grew by 13.5 per cent and constituted 81 per cent of the total liabilities of the banking system rising from 76 per cent recorded in December 2008. Liabilities of the non bank financial institutions expanded in real terms by 12.8 per cent constituting 3 per cent of the liabilities of the banking system, a trend that has been constant over the last five years. Credit by NBFIs to private sector rose significantly in real terms to KSh 11.9 billion, a 37.9 per cent increase.

¹ Introduced in 2006² Weighted average commercial bank interest rates**Nominal and Real Interest Rates**

5.7. Principal nominal interest rates for the period 2005-2009 are shown in Table 5.6. The average interest rate on 91-day Treasury bills declined to 7.33 per cent in June 2009 and further to 6.82 per cent in December 2009. The decline may be explained partly by the shift in policy from over reliance on short term Government securities to longer dated Treasury bond securities targeted for infrastructure development. This is in addition to lowering of the Central Bank Rate (CBR) to 7.00 per cent in the fourth quarter of the year. The inter-bank

rate similarly declined by 3.72 percentage points to 2.95 per cent in December 2009. All other interest rates remained at the December 2008 levels.

5.8. Selected real interest rates are presented in Table 5.7. The real interest rate for 91-day Treasury Bills improved from negative 9.0 per cent in 2008 to 1.5 per cent in December 2009. Similarly the real lending rate (max) became positive from negative 2.8 per cent to 9.5 per cent. Both commercial banks real average savings deposit and inter-bank rates also improved but remained negative at 3.0 and 2.4 per cent over the review period.

Central Bank's Balance Sheet 5.9. The Central Bank's balance sheet is presented in Table 5.8. Assets and liabilities of the bank increased by 19.3 per cent in December 2009 compared to a marginal increase recorded in December 2008. Contributing to the increase in assets was an increase in foreign exchange reserves, which grew by 26.2 per cent from KSh 223.5 billion in 2008 to KSh 282.0 billion in 2009 following disbursements of SDR 135.7 million (about US\$ 209 million), under the Exogenous Shocks Facility (ESF) by IMF. Other assets (including Kenya Treasury bills and bonds) rose significantly by 16.9 per cent to KSh 6.5 billion mainly due to introduction of the infrastructure bond during the year. The increase in assets was however moderated by a decline in direct advances and overdraft to Government which dropped by 11.2 per cent in December.

5.10. The increase in assets was however, moderated by a decline in direct advances and overdrafts to Government which dropped by 11.8 per cent in December 2009, compared to an increase of 19.6 per cent recorded in 2008. The growth in assets led to an increase in liabilities with the capital and general reserve fund rising by 84.5 per cent to stand at KSh 26.3 billion, while currency in circulation expanded by 7.4 per cent to reach KSh 124.3 billion. All deposits held by the Central Bank rose by 34.3 per cent in December 2009 compared to a decline of 7.1 per cent recorded in 2008. Contributing to this increase were deposits by the Kenya Government, deposits by Kenya banks and deposits by external banks which expanded by 40.6, 20.5 and 64.6 per cent respectively. Other liabilities declined by 60.5 per cent to stand at KSh 5.3 billion in December 2009.

Commercial Banks' credit and liquidity

5.11. Commercial banks' bills, loans and advances are presented in Table 5.9a. Credit to Central Government declined by 60.5 per cent while credit to Local Government and other public entities rose by 42.6 and 40.1 per cent respectively at 31st December 2009. Overall credit to private enterprises engaged in various sectors grew by 14.4 per cent.

5.12. In December 2009, the sectors that received increased commercial banks' credit included financial institutions, agriculture, and transport, storage and communication, which grew by 35.1, 22.7, and 11.9 per cent, respectively. Commercial bank credit to manufacturing; and mining and quarrying sectors declined by 2.6 per cent and 20.2 per cent in the same period. Commercial bank credit to community and social services remained at the 2008 level.

5.13. Sectoral shares of credit by commercial banks are shown in Table 5.9b. Over 80 per cent of credit was loaned to private enterprises. Share of loans and advances to the public sector increased from 2.2 per cent in December 2008 to 2.8 per cent in December 2009. Other sectors that recorded improved share of commercial bank credit include; other public entities, agriculture, transport, trade, financial intermediation, and other business services.

5.14. Commercial banks deposit liabilities and liquid assets are presented in Table 5.10. Deposit liabilities grew by 19.6 per cent to KSh 989.7 billion in December 2009 while liquid assets expanded by 22.1 per cent to KSh 396.7 billion over the same period. On average the commercial banks remained liquid at 40.1 per cent which was well above the statutory requirement of 20.0 per cent during 2009.

¹ Deposits and Liquid Assets are calculated as an average of three days balances.² Includes notes and coins, balances at Central Bank, net inter-bank balances in Kenya and Overseas (included only if positive) and Treasury Bills.

Consolidated Balance Sheet for Non-Bank Financial Institutions 5.15. Assets and liabilities of the non bank financial institutions are shown in Table 5.11. Overall, the assets and liabilities expanded by 19.5 per cent in December 2009 decelerating from the 22.5 per cent growth recorded in December 2008 to stand at KSh 40 billion. The continued growth in assets held by these institutions may be explained by the turnaround experienced in the mortgage market driven largely by the civil service housing scheme. Supporting the growth in liabilities was a 79.7 per cent increase in Central and Local government deposits coupled with a 66.3 per increase in other liabilities. Credit by the NBFIs to the private sector rose by 45.3 per cent to KSh 30.5 billion in the period under review.

Capital Market Indicators 5.16. Key Stock market indicators showed improved performance at the equity market with the volume of shares traded increasing from 855 million in 2008 to 1,124 million shares in 2009, while the value rose to KSh 13,043 million (Table 5.12). Market capitalization declined from KSh 854 billion recorded in December 2008 to KSh 832 billion in December 2009. The decrease in market capitalization may be attributed to the decline in prices of most shares. The NSE 20 Share Index dropped by 7.8 per cent to close at 3,247 points in December 2009.

Develop- ments in the Financial Sector	Banking, Non Bank Financial and Deposit taking Microfinance Institutions 5.17. The banking sector comprises of 44 commercial banks following approval and issuance of a license to UBA Bank Kenya Ltd in September 2009. Other players in the banking sector included, two mortgage finance companies, one deposit taking microfinance institution and 130 foreign exchange bureaus. During the period ended 31 st December 2009, the banking sector registered significant growth in asset base largely supported by growth in deposits, injection of capital and retention of profits
---------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Policy and Legislation

5.18. The Banking (Credit Reference Bureau) Regulations, 2008 became operational in February 2009. The regulations empower CBK to license and oversee credit reference bureaus. The bureaus will collate credit information from banks to be used in facilitating lending decisions. Out of the three applications for credit reference licenses, only Credit Reference Bureau Africa's was approved. Other policy developments include Presidential Assent to the Finance Act, 2009 which amended several statutes including the Banking Act, the Central Bank of Kenya Act and the Microfinance Act.

5.19. The Proceeds of Crime and Anti-Money Laundering Act, 2009 (AML Act) was passed by Parliament and assented to by His Excellency the President in December 2009 and is awaiting gazettment. The CBK hosted a joint IMF/World Bank mission in September 2009 which undertook the updated Financial Sector Assessment Programme (FSAP), the last one having been carried out in 2003.

5.20. The Monetary Policy Committee (MPC) continued to monitor the impact of the global financial crisis on the economy. The Bank operationalised the Horizontal Repo in March 2009 to enhance access as well as improve distribution of liquidity in the inter-bank market. This move was aimed at improving the intermediation process by freeing up liquidity which was not being used optimally for macroeconomic activities.

Capital Markets

5.21. The year ended December 2009 registered mixed performance, relative to 2008. The top ten companies accounted for 73.9 per cent of total equity capitalization in December 2009 against 64.7 per cent recorded in 2008 and 81.8 per cent of equity turnover. In terms of equity stakes, East African institutions continued to be the dominant investors at the NSE with an aggregate shareholding of 74 per cent. However there was some improvement during 2009 in foreign investor shareholding at the NSE, a clear break from a trend in which foreign investor shareholding has been on a steady decline over the past 5 years.

5.22. The Capital Markets Authority (CMA) fronted; The Capital Markets (Corporate Governance) (Market Intermediaries) Regulations 2009; The Capital Markets (Conduct of Business) (Market Intermediaries) Regulations 2009 and Capital Markets (Real Estate Investment Trusts) Regulations, 2009. On enforcement, up to 90 per cent of Nyaga Stockbrokers' clients were compensated, emphasizing CMA's commitment to maintain investor confidence in Kenya's capital markets.

Chapter 6

Public Finance

Overview **T**he Government in 2009/10 adopted an expansionary fiscal policy in an effort to overcome the major policy challenges of accelerated economic growth to a sustained higher level, create economic opportunities, improve food security and reduce poverty in line with the first medium term plan of the Vision 2030. This intervention will also seek to counter the aftershocks of the global economic crisis as well as the negative impacts of the Post Election Violence (PEV) experienced in 2008. Implementation of this measure will be in the form of an economic stimulus package that entails to a great extent, an increase in public spending through development of key infrastructure facilities and public works among other initiatives. Financing shortfalls that are likely to arise from the increased spending will be offset by increased domestic borrowing combined with savings derived from expenditure rationalization measures pursued during the period under review.

6.2. Fiscal policy in the review period will be premised on the need to strike a balance between supporting the anticipated growth and maintaining medium to long-term debt sustainability through prudent borrowing. Local Authority Transfer Fund (LATF) continues to be the main fiscal transfer mechanism to local authorities channeling significant resources to the local level and at the same time providing a framework for the facilitation of performance improvement.

Overall Results 6.3. In 2009/10, the Government plans to spend KSh 887.0 billion out of which KSh 633.9 billion is budgeted to finance recurrent expenditure while KSh 253.1 billion will cater for development expenditure. The share of development expenditure in total expenditure is expected to improve from 23.1 per cent recorded in 2008/09 to 28.5 per cent in 2009/10 reflecting the government policy to re-orient allocations in favour of development expenditure. Total revenue (including grants) is expected to grow by 15.3 per cent from KSh 531.5 billion to KSh 612.6 billion in the same period. The stock of outstanding public debt as at the end of June 2009 stood at KSh 889.9 billion comprising of KSh 401.7 billion in internal debt and KSh 488.2 billion in external debt. Local authorities' expenditure budget is expected to stand at KSh 29.4 billion in 2009/10, compared to KSh 25.3 billion in 2008/09. Transfers from Central Government through LATF mechanism is expected to grow from KSh 9.2 billion in 2008/09 to KSh 10.4 billion in 2009/10.

6.4. Table 6.1 presents a statement of Central Government operations for the period between 2005/06 and 2009/10. In the year under review, expense which broadly consists of current expenditure and capital transfers is expected to increase by 30.8 per cent from KSh 489.1 billion in 2008/09 to KSh 639.6 billion in 2009/10. Net borrowing is expected to grow from KSh 54.4 billion in 2008/09 to KSh 167.9 billion in 2009/10. This outcome is expected to arise from increased domestic borrowing to finance projects and programmes proposed in the economic stimulus package. Net financing is expected to increase from KSh 90.0 billion in 2008/09 to KSh 102.6 billion in 2009/10, the bulk of which will be sourced from domestic borrowing. Expenditure on acquisition of financial assets (net) is expected to decline from KSh 9.0 billion in 2008/09 to KSh 6.7 billion in 2009/10.

+Revised estimates

¹ includes grants & AIA² Acquisition of Non financial assets(net) = Acquisition of Non financial assets - Gross Disposal of Non financial assets

6.5. Table 6.2 presents an analysis of key fiscal ratios for the period 2005/06 to 2009/10. The ratio of acquisition of non financial assets (net) to current expenditure is expected to improve from 21.0 per cent in 2008/09 to 25.7 per cent in 2009/10 on account of capital projects identified in the economic stimulus package. Net borrowing as a percentage of revenue and as a percentage of total expenditure is expected to worsen to 27.3 and 19.0 per cent, respectively. The ratio of external grants and loans to acquisition of non-financial assets is expected to decline from 38.3 per cent in 2008/09 to 24.5 per cent in 2009/10. The ratio of revenue to GDP at market prices is expected to increase from 25.6 per cent in 2008/09 to 26.9 per cent in 2009/10. Over the same period, the ratio of expenditure to GDP is expected to increase from 32.4 to 39.0.

+ Revised Estimates

6.6. A comparative analysis of budgeted estimates and actual out-turns of revenue and expenditure for the fiscal period 2006/07 to 2009/10 is presented in Table 6.3. The disparity between budgeted and the actual out-turn of recurrent revenue is estimated to decline from a deficit of KSh 14.5 billion in 2008/09 to a surplus of KSh 7.7 billion in 2009/10. This is expected to follow from the continued expansion of the revenue base among other tax administration measures. On the other hand, revised recurrent expenditure is expected to deviate upwards from the budgeted expenditure by 5.3 per cent, equivalent to KSh 31.7 billion. On the contrary, revised development expenditure is expected to be lower than the budgeted expenditure by KSh 13.7 billion in the period under review.

+ Revised budget estimates

¹Recurrent expenditure consists of current expenditure, Acquisition of Non financial assets(net) and Consolidated Fund Services from the Recurrent- Estimates

²Includes external grants.

6.7. Table 6.4 provides details of Government gross receipts on the recurrent account for the financial years 2005/06 to 2009/10. Total receipts are expected to remain on an increasing trend and are estimated to grow by 15.0 per cent in 2009/10 to stand at KSh 577.3 billion on account of notable growths in the various sources of revenue. Total tax revenue is expected to grow by 15.9 per cent from KSh 459.4 billion in 2008/09 to KSh 532.5 billion in 2009/10 largely due to the continued efforts to meet and surpass the set revenue collection targets coupled with other reforms aimed at strengthening tax administration. Analogously, non-tax revenue is estimated to increase by 4.6 per cent as a consequence of anticipated growths in all components under this category, except sale of goods and services which is expected to decline by 6.1 per cent. Taxes on income, profits and capital gains are expected to record improved growth of 19.4 per cent in 2009/10 compared to 11.7 per cent growth realised in 2008/09. Income tax from corporations is expected to grow by 20.7 per cent in 2009/10 compared to 8.5 per cent growth in 2008/09. Taxes from excise and custom duties are estimated to increase by 11.7 and 12.2 per cent, respectively in the period under review.

+ Revised Estimates

¹This account refers to current receipts as well as AIA which is distributed under various heads including sales of goods and services.

6.8. Details on import duty revenue obtained from selected commodities classified by end use for 2005 to 2009 are presented in Table 6.5. Total import duty increased by 14.6 per cent from KSh 29.4 billion in 2008 to KSh 33.7 billion in 2009. Import duty levied on semi-manufactures and the food, drinks and tobacco categories were the major contributors to this growth, expanding by 84.3 and 25.6 per cent, respectively. The revenue growth under the food and drinks category may be partly attributed to an increase in import duty levied on wheat which was instituted to counter the possible influx of cheap imports resulting from a fall in wheat prices in the international market. Revenue from transport equipment grew at a slower pace in 2009 compared to the growth realised in the previous year partly due to zero-rating of duty levied on motor cycles. Duty collected from levies on metals and fuels declined by 4.9 and 5.1 per cent, respectively in the same period.

Table 6.5: Central Government Import Duty Collections for Selected Items¹, 2005 - 2009

¹ Excludes non-metallic mineral manufactures

6.9. Table 6.6 details the revenue from excise duty on some selected locally manufactured commodities for the period 2005 to 2009. Excise duty grew by 7.4 per cent in 2009, representing a 4.8 percentage points drop from the growth realized in 2008. The slower growth was as a result of combined effects of reductions and/or zero rating of excise duty levied on a number of commodities. Excise duty collected on mineral water dropped by 18.8 per cent from KSh 1.6 billion in 2008 to KSh 1.3 billion in 2009. Duty on other commodities that include cosmetics and skin care products and locally manufactured vehicles recorded a substantial decline. This was occasioned by changes in duty levied on these goods in 2009. In particular, excise duty on cosmetics was reduced significantly while that on jewellery was zero-rated. Nevertheless, a change in the regime used to levy excise duty on alcohol from alcohol by volume to the re-introduction of a hybrid type of specific ad valorem led to a considerable growth in duty realised from beer, and wines and spirits which rose by 24.0 and 49.9 per cent, respectively. Revenue obtained from cigarettes declined partly due to the continued enforcement of the Tobacco Control Act, 2007.

6.10. Table 6.7 details the Central Government financing of acquisition of non-financial assets during 2005/06 to 2009/10. Financing of non financial assets from external sources which comprise of external loans and grants, declined by 18.0 per cent in 2009/10. Domestic financing through treasury bills increased from KSh 37.3 billion in 2008/09 to KSh 40.0 billion in 2009/10 while that from long-term borrowing rose from KSh 40.7 billion in 2008/09 to KSh 62.3 billion in the same period. The increase in domestic financing was to a considerable extent funded by the floating of an infrastructure bond of KSh 14.5 billion issued in February 2010 to fund infrastructure projects and increased domestic borrowing to bridge the financing gap.

+ Revised budget estimates

¹ Balancing Item

6.11. Classification of expenditure by functions of Government for the financial years 2006/07 to 2009/10 is shown in Table 6.8. Total government expenditure is expected to grow by 31.9 per cent from KSh 672.7 billion in 2008/09 to KSh 887.0 billion in 2009/10. A large part of this growth will result from expenditure allocation to economic affairs that is expected to increase substantially from KSh 118.0 billion in 2008/09 to KSh 182.6 billion in 2009/10. This growth is expected to be partly driven by funding of the economic stimulus package and infrastructure development. Specifically, expenditure on transport and, fuel and energy is estimated to increase by 70.2 and 17.4 per cent, respectively during the review period. The rise in the budgeted expenditure on transport is attributable to the continued funding of construction and rehabilitation of roads. The expected surge in expenditure on fuel and energy will be as a result of allocation towards development of alternative sources of energy such as geothermal power as well as oil exploration efforts currently going on in various parts of the country.

6.12. Expenditure on the social services, which comprise of education and health, is expected to account for the largest part of total expenditure as shown in Figure 6.1. This is mainly due to funding of Free Tuition Secondary Education (FTSE) and Free Primary Education (FPE) programmes together with increased allocation to cater for basic healthcare. In the year under review, expenditure on general public services and public debt services are expected to increase by 47.4 per cent and 29.4 per cent, respectively.

Figure 6.1: Expenditures by functions of Government, 2008/09- 2009/10

6.13. Economic analysis of Central Government expenditure is provided in Table 6.9. Expenditure on consumption of goods and services that includes compensation of employees and, use of goods and services is expected to increase by 20.0 per cent from KSh 274.1 billion in 2008/09 to KSh 328.8 billion in 2009/10. In particular, expenditure on compensation of employees is expected to increase from KSh 183.1 billion in 2008/09 to KSh 208.8 billion in 2009/10, surpassing the KSh 200 billion mark for the first time. Expenditure on use of goods and services is expected to follow a similar trend to reach KSh 120.0 billion. Interest and principal repayments on public debt are expected to increase by 29.8 and 28.9 per cent, respectively in the review period. Central Government grants to various entities are expected to grow by 29.2 per cent from KSh 107.0 billion in 2008/09 to KSh 138.2 billion in 2009/10. The main contributor to this growth is grants to general government units that include, transfers to parastatals, public universities, the Local Authority Transfer Fund (LATF), the Constituency Development Fund (CDF), and Higher Education Loans Board (HELB) among others. Expenditure on capital transfers is estimated to increase substantially from KSh 27.8 billion in 2008/09 to KSh 78.0 billion in 2009/10 owing to increased funding of capital projects through semi auto nomous government agencies among them being enhancement of the National Grid. The expenditure on acquisition of non financial assets (net) is expected to register a remarkable growth from KSh 96.8 billion in 2008/09 to KSh 140.8 billion in 2009/10. Specifically, expenditure on building and structures is budgeted to increase by 59.2 per cent principally due to the proposed projects under the economic stimulus package.

+ Revised Budget Estimates

6.14. Table 6.10 presents aggregated stock of public debt as at the end of June for the period 2005 to 2009. The national debt management policy seeks to meet Central Government's financing needs at the lowest possible long term borrowing costs as well as facilitate Government's access to financial markets. In view of this, emphasis has been put to contract external loans mainly on concessional terms. The Government has also put in place a framework for recording and monitoring contingent liabilities to ensure that debt remains sustainable in both medium term and long term. In the year under review, the stock of public debt increased from KSh 748.5 billion in 2008 to KSh 889.9 billion in 2009, representing 18.9 per cent increase. In spite of the increase, recent Debt Sustainability Analysis (DSA) based on World Bank-IMF debt sustainability framework showed that Kenya's level of debt is sustainable. Domestic debt stood at KSh 401.7 billion in 2009, and has remained below 45 per cent of total debt for the last five years. Substitution of external financing with domestic financing has been hampered by limited scope to substitute external resources with domestic resources due to its potential risk of crowding out private sector investments.

¹ Includes Short Term Borrowing.

6.15. Table 6.11 shows the Central Government stock of debt by source for 2005 to 2009. Both stocks of external and internal debts recorded accelerated growths from 4.1 per cent and 5.2 per cent in 2008 to 18.1 per cent and 19.9 per cent 2009, respectively. Total debt from bilateral creditors that had been declining prior to 2009 exhibited a reversed trend to rise by 20.8 per cent in 2009. Japan continued to be the leading bilateral lender despite the significant drop in its lending in 2008, while IDA/IFAD remained the main source of debt from multilateral lenders. Domestic borrowing through treasury bills (excluding REPOs) registered a substantial increase from KSh 76.8 billion in 2008 to KSh 116.8 billion in 2009. This increase was largely taken up by financial institutions in the short term securities' market. Internal debt derived from treasury bonds rose by 14.5 per cent to stand at KSh 360.7 billion in 2009. The increase is partly attributable to the infrastructure bond of KSh 18.5 billion issued in February 2009 to finance infrastructural projects in water and sanitation, energy and road construction.

6.17. Data on debt servicing charges and, receipts from interest and loan repayment on on-lending is shown in Table 6.13. Total public debt servicing charges declined from KSh 142.1 billion in 2008 to KSh 124.6 billion in 2009 representing a 12.3 per cent drop. Similarly, total receipts from interest and loan repayments declined from KSh 0.7 billion in 2008 to KSh 0.6 billion in 2009. Consequently, net servicing charges dropped from KSh 141.4 billion in 2008 to KSh 124.0 billion in 2009.

¹ Annual debt servicing Charges = Public debt redemption (Table 6. 1)+Interest (Table 6.9)

6.18. Table 6.14 provides the relationship between debt service charges on external debt and export of goods and services for the years 2005 to 2009. The details informs the assessment of the Government's external debt servicing capacity and measure the cost of servicing debt in terms of the foreign exchange earnings of the country. In the year under review, the ratio of external debt services to exports of goods and services declined by 0.3 percentage points. This resulted from the combined effect of 7.8 per cent decline in external debt servicing charges and a marginal drop in exports of goods and services from KSh 573.5 billion in 2008 to KSh 573.4 billion in 2009.

Local Authorities

6.19. Local Government authorities have been implementing a number of reforms aimed at transforming them into efficient entities. One of the key reforms underway is the introduction of the Local Authority Integrated Financial Operations Management System (LAIFOMS) that will among other benefits result in efficiency and accountability in the way local authorities

manage their financial operations. In addition, the Local Authority Transfer Fund (LATF) has continued to be a crucial avenue for devolving funds from Central Government to the grass roots through the local authorities. This Fund seeks to supplement locally generated resources to enable the local authorities provide services adequately. In 2009/10 financial year, KSh 10.4 billion is expected to be transferred to the local authorities through LATF representing 11.8 per cent increase from KSh 9.3 billion transferred in 2008/09. As shown in Figure 6.2, LATF disbursements have been increasing strongly over the years. This has been in tandem with increases in income tax collected by the Kenya Revenue Authority (KRA).

6.20. Table 6.16 presents local authorities' expenditure by category from 2005/06 to 2009/10. Local Governments' budgeted expenditure is estimated to increase by 16.2 per cent from KSh 25.3 billion in 2008/09 to KSh 29.4 billion in 2009/10. Nairobi City Council's expenditure is expected to reach about KSh 10.0 billion in the year under review, accounting for slightly over a third of total budgeted expenditure as shown in Figure 6.3. Expenditure by other cities and municipal councils is also expected to increase by 17.0 per cent while that of town and county councils is estimated to reach KSh 10.8 billion in the year under review.

** Budget Estimates

Figure 6.3: Proportion of Expenditure by Category of Local Authorities- 2009/10

6.21 Classification of municipal councils' expenditure by main services is provided in Table 6.17. Total expenditure is expected to grow by 14.8 per cent from KSh 16.2 billion in 2008/09 to KSh 18.6 billion in 2009/10. In the year under review, expenditure on community services is expected to increase by 23.6 per cent, while those of social and economic services are expected to increase by 14.2 per cent each. As illustrated in Figure 6.4, expenditure on the economic services category is anticipated to continue to receive preference over the other categories. This is evidenced by a higher growth of expenditure in economic services compared to the other services. Water undertaking is expected to take the bulk of expenditure on economic services accounting for 48.6 per cent.

+ Estimates

¹ Includes Nairobi City Council**Figure 6.4: Municipal Councils expenditure by main services**

6.22. Details of economic classification of expenditure for municipal councils from 2005/06 to 2009/10 are presented in Table 6.18. The proportion of capital expenditure is expected to be about 30.2 per cent of the total expenditure in 2009/10. Current expenditure is expected to grow faster than capital expenditure by 7.5 percentage points. Expenditure on compensation of employees is expected to increase from KSh 7.3 billion in 2008/09 to KSh 7.6 billion in 2009/10. Similarly, expenditure on use of goods and services is estimated to grow from KSh

3.6 billion in 2008/09 to KSh 5.2 billion in 2009/10.

+ Budget Estimates

¹ Includes interest.

6.23. Table 6.19 shows the total receipts generated by municipal councils for the period 2005/06 to 2009/10. Total receipts are expected to decline from KSh 13.3 billion in 2008/09 to KSh 12.0 billion in 2009/10. Contrary to the decline exhibited in 2008/09, revenue from sale of goods and services is expected to increase by 20.6 per cent from KSh 3.4 billion in 2008/09 to KSh 4.1 billion in 2009/10. Direct taxes and indirect taxes are expected to register modest growths of 1.4 and 3.8 per cent, respectively during the review period. In contrast, revenue from current transfers is expected to decline from KSh 2.2 billion in 2008/09 to KSh 1.8 billion in 2009/10.

6.24. Table 6.20 details the economic analysis of expenditure and revenue for towns and county councils for the fiscal period 2005/06 to 2009/10. Total expenditure by towns and county councils is expected to grow from KSh 9.1 billion in 2008/09 to KSh 10.8 billion in 2009/10. Expenditure on compensation of employees is anticipated to increase from KSh 3.5 billion in 2008/09 to KSh 4.2 billion in 2009/10. Expenditure on use of goods and services is expected to follow a similar trend, growing by 14.8 per cent. Expenditure on acquisition of non-financial assets is expected to record a 25.0 per cent growth after declining by 8.1 per cent in 2008/09. Total revenue is expected to almost stagnate at KSh 4.4 billion as a consequence of dismal performance of the various revenue streams. Sale of goods and services is expected to increase modestly from KSh 2.0 billion in 2008/09 to KSh 2.1 billion in 2009/10 and is the only category of current revenue expected to register some growth.

Chapter 7

International Trade and Balance of Payments

Overview Following the global economic downturn experienced in 2009, world trade contracted in volume terms. Kenya's volume of merchandise trade grew by a paltry 1.6 per cent in 2009 compared to 26.8 per cent growth in 2008 while trade balance deteriorated by 4.1 per cent compared to a deterioration of 28.8 per cent in the previous period. In 2009, the value of exports stood at 43.8 per cent of imports, compared to 44.8 per cent in 2008. As reflected by the annual average exchange rate, the Kenya Shilling depreciated against the US dollar to exchange at KSh 77.35 in 2009 compared to KSh 69.18 in 2008.

7.2. During the period under review, domestic exports grew marginally by 0.3 per cent while re-exports declined by 4.1 per cent compared to growths of 23.3 per cent and 71.8 per cent respectively, in 2008. Total imports grew by 2.3 per cent in 2009 compared to a 27.4 per cent growth recorded in 2008. Tea, horticulture, coffee and articles of apparels and clothing accessories were the dominant exports, collectively accounting for 50.5 per cent of the total domestic export earnings from goods.

7.3. The balance of payments position recorded a surplus of KSh 75,180 million in 2009 compared to a deficit of KSh 33,161 million in 2008. This improvement was on account of increased net capital inflows coupled with improvement in the current account balance from a deficit of KSh 137,147 million in 2008 to a deficit of KSh 124,446 million in 2009. The capital and financial account recorded a surplus of KSh 215,864 million in 2009 as a result of increased inflows of foreign direct investment and, short and long term capital inflows.

Balance of Trade 7.4. Table 7.1 and Figure 7.1 present the trade balance from 2005 to 2009. The value of international trade increased by 1.6 per cent compared to a 26.8 per cent increase recorded in 2008. Total exports remained at the 2008 level. Domestic Exports increased slightly by 0.3 per cent while re-exports decreased by 4.1 per cent compared to a 71.8 per cent increase recorded in the previous year. Total imports increased by 2.3 per cent compared to a 27.4 per cent growth recorded in 2008. The value of government imports increased by 11.9 per cent in 2009 while commercial imports rose by 2.2 per cent compared to a 27.7 per cent increase recorded in the previous review period. Trade balance widened further from a deficit of KSh 425,705 million in 2008 to KSh 443,147 million in 2009. In 2009, export earnings covered 43.8 per cent of the total imports.

Figure 7.1: Balance of Trade, 2005 – 2009

Price Changes 7.5. Export and import price indices by commodity groups for the last five years are shown in Table 7.2. The overall export price index which had grown by 18.9 per cent in 2008 rose by 7.3 per cent in 2009. This is partly attributed to a decline of 19.6 per cent in the export index for mineral fuels. Growth in the overall import price index slowed to 0.4 per cent in 2009 from 7.6 per cent registered in 2008. Export and import price indices for non-oil items rose by 13.0 per cent and 6.5 per cent, respectively, in the period under review.

Table 7.2: Price Indices, 2005-2009

Non-oil Imports	780	980	991	1,079	1,149

* provisional

7.6. Import price indices for all the categories increased in 2009 except for mineral fuels, chemicals and, machinery and transport equipment. The decline in mineral fuels index was a reflection of the falling oil prices in the world market. During the review period, the import price indices for food and live animals, beverages and tobacco, miscellaneous manufactured articles and inedible crude materials increased significantly by 54.1, 47.9, 20.4 and 12.9 per cent, respectively. The import price indices for animals and vegetable oils and fats increased by 7.4 per cent during the year under review.

Terms of Trade 7.7. Terms of trade refers to the ratio of export price index to import price index. As indicated in Table 7.3, terms of trade for all items and for non-oil items improved by 5 percentage points each to stand at 82 and 99 per cent respectively, in 2009. The improvement is as a result of faster growth in the export unit prices of the commodities compared to the import unit prices. In spite of this improvement, Kenya's terms of trade remain unfavourable.

Chapter 7: International Trade and Balance of Payments

Non-oil Items	84	90	88	94	99

* provisional

Volume Changes 7.8. Quantum indices which measure changes in the volume of trade are summarized in Table 7.4. The overall quantum index for non-oil exports dropped by 11.7 per cent in 2009 compared to a growth of 8.9 per cent in 2008. The overall index for exports declined by 6.5 per cent compared to a growth of 5.3 per cent registered in 2008. The fall in volume was largely due to the significant declines in manufactured goods, chemicals, food and live animals, inedible crude materials and miscellaneous manufactured goods. The quantum index for mineral fuels and beverages and, tobacco increased substantially by 43.2 per cent and 15.5 per cent, respectively, in the review period.

Table 7.4: Quantum Indices, 2005-2009

*provisional

7.9. The overall import quantum indices for non-oil items and all items rose by 3.7 per cent and 1.9 per cent, respectively, in 2009 compared to higher growths of 8.0 per cent and 18.5 per cent in the previous period. The slow growth was mainly due to significant declines in import quantum indices for; beverages and tobacco; animal and vegetable oils and fats; and miscellaneous manufactured articles. The import quantum index for food and live animals grew by 17.4 per cent while that of machinery and transport equipment and chemicals rose by

11.7 per cent and 2.3 per cent, respectively, in the period under review.

**Quantities
of Principal
Exports and
Imports**

7.10. Quantities of principal exports and imports are presented in Table 7.5. Export quantities of meals and flours of wheat rose by 78.1 per cent in 2009. Significant increases were recorded in export quantities of animal and vegetable oils, coffee, essential oils, beer made from malt and wire products. Notable declines were recorded in export quantities of fluorspar, stone and gravel and, raw maize which dropped by 94.8, 79.7 and 78.6 per cent, respectively. Other notable declines in exports were recorded for fish and fish preparations, soda ash, horticulture and tea. The declines in horticulture and tea could be attributed to the reduction in the demand for these commodities following the economic recession. Paper and paperboard exports dropped by 63.9 per cent in 2009 mainly due to non-production by Pan Paper Mills Company, a major producer.

7.11. Import quantities of unmilled maize increased more than six times from 243.7 thousand tonnes in 2008 to 1,508.4 thousand tonnes in 2009 while that of unmilled wheat and rice increased by 45.2 per cent and 14.1 per cent, respectively. This could be partially attributed to measures taken by the government to meet food shortages resulting from the drought experienced in 2009. Import quantities of iron and steel, chemical fertilizers, petroleum products and, paper and paper board increased by 46.3, 39.7, 34.6 and 26.4 per cent, respectively. The increase in import quantities of iron and steel could be attributed to the increased demand from the construction industry while that of paper and paperboard was to meet domestic demand. The increase in the import quantity of chemical fertilizers could be explained by the Government policy of subsidizing farm inputs for farmers in a bid to boost agricultural production. Import quantities of sugar, molasses and honey; and, medicinal and pharmaceutical products declined by 12.2 per cent, each, while import quantities of crude petroleum declined by 8.2 per cent in the review period.

**Values of
principal
exports and
imports**

7.12. The values of principal exports and imports are shown in Table 7.6. Tea, horticulture, coffee and articles of apparels and clothing accessories were the leading exports, collectively accounting for 50.5 per cent of the total domestic export earnings. Earnings from tea exports rose by 7.8 per cent in 2009 compared to 36.5 per cent in 2008, accounting for 21.3 per cent of the total export earnings in 2009. Horticulture, which has been the leading export earner recorded a decline of 8.4 per cent in export value to stand at KSh 65,220 million in 2009. Despite the decline, horticulture was the second leading export earner, contributing 20.2 per cent of the total export earnings. Export earnings from coffee rose by 51.2 per cent from KSh 10,126 million in 2008 to KSh 15,309 million in 2009. The share of coffee earnings in total export earnings increased to 4.7 per cent from 3.1 per cent in 2008. Export earnings from articles of apparels and clothing accessories declined by 20.1 per cent, while its contribution to the total domestic exports declined by 1.1 percentage points. Export earnings from essentials oils increased markedly from KSh 6,427 million in 2008 to KSh 8,231 million in the review period. Export values of animal and vegetable fats, beer made from malt, medicinal and pharmaceutical products and, meals and flours of wheat also increased in the review period. Export earnings were however recorded for fluorspar from KSh 2,191 million in 2008 to KSh 153 million in the year under review. Similarly, soda ash export earnings decreased by 37.0 per cent from KSh 13,185 million in 2008 to KSh 8,305 million in 2009. In the same period, export revenue from metal scrap, paper and paperboard, stone, sand and gravel and raw maize reduced considerably.

7.13. Expenditure on imports of maize rose five times from KSh 6,665 million in 2008 to KSh 33,945 million in the review period while the import value of wheat flour more than doubled to reach KSh 1,525 million in 2009. Other notable growths in imports values were recorded for rice, essential oils and perfumes, second hand clothing and industrial machinery which rose by 26.5, 24.9, 23.8 and 19.7 per cent, respectively. High shares of the import bill were noted for industrial machinery, petroleum products and crude petroleum which stood at 15.5, 12.6 and 6.9 per cent, respectively. Major declines were however recorded in the imports of crude petroleum, bicycles, animal and vegetable fats; and petroleum products that decreased by magnitudes of 33.1, 25.4, 19.2 and 14.8 per cent, respectively.

Prices 7.14. Tables 7.7, 7.8 and 7.9 present the values, quantities and prices of selected domestic
Changes of exports and imports. Despite the notable increase in the export unit price of fish and fish
Principal preparations, total value of its exports declined by 14.4 per cent. The growth in tea export
Imports and unit price countered the 16.3 per cent decline in export quantities resulting in an increase in
Domestic its total earnings. The increase in total value of coffee exports was proportionately higher than
Exports that in the volume of exports. Although the export unit price of fluorspar rose by 34.2 per
cent in 2009, the total export quantities declined by 94.8 per cent. Likewise, the quantities of
tobacco and tobacco manufactures exported declined by 2.0 per cent. However, the increase
in the export unit price resulted in a 15.0 per cent growth in its export earnings. In spite of
the 5.7 per cent decrease in the unit price of essential oils, export earnings increased by 28.1
per cent because of a 35.8 per cent increase in export volumes.

7.15. The import unit prices of maize and un-milled wheat declined in the review period. In the same period, import unit price of crude petroleum decreased by 27.1 per cent while the import value declined by 33.1 per cent. On the other hand, the 33.7 per cent decline in the import unit price of iron and steel led to a 46.3 per cent increase in the volume of its imports.

* Provisional.

Composition of Exports 7.16. Export earnings from food and beverages increased marginally by 5.0 per cent in 2009 compared to a growth of 23.4 per cent in the previous period. This was partly on the account of declines recorded in the processed food and beverages for household consumption. The value of export earnings from non-food industrial supplies deteriorated from a 38.7 per cent increase in 2008 to a decline of 5.6 per cent in the review period. This was on account of a 9.0 per cent decline in the processed non-food industrial supplies from KSh 74,037 million in 2008 to KSh 67,367 million in 2009. Export earnings from consumer goods not elsewhere specified decreased by 4.4 per cent following a 16.0 per cent decline in the export earnings from semi-durable consumer goods.

7.17. Domestic exports classified by broad economic category are presented in Table 7.10. Food and beverages continued to be the main export earner accounting for 42.3 per cent of the total domestic export earnings in 2009. During the period under review, the share of non-food industrial supplies in the total earnings from domestic exports declined from 28.7 per cent in 2008 to 27.0 per cent. The share of earnings from fuel and lubricants in 2009 remained at the 2008 levels. Export earnings from machinery and other capital equipment accounted for 2.1 per cent while the share of transport equipment earnings rose to 1.8 per cent in 2009 from 1.1 per cent in 2008.

Composition of Imports 7.18. Presented in Table 7.11 are imports by broad economic category. Total expenditure on fuels and lubricants, and non-food industrial supplies declined by 19.9 per cent and 2.9 per cent, respectively in 2009. Expenditure on food and beverages increased substantially by 68.7 per cent from KSh 53,614 million in 2008 to KSh 90,437 million in 2009 accounting for 11.5 per cent of the total import bill. The expenditure on transport equipment increased by 16.1 per cent from KSh 89,103 million to KSh 103,449 million in the review period. Expenditure on machinery and other capital equipment rose by 7.4 per cent in 2009 compared to an increase of 31.5 per cent in 2008.

7.19. During the review period, expenditure on non-food industrial supplies and, fuel and lubricants continued to contribute the biggest share of the total import bill accounting for 29.4 and 21.0 per cent, respectively. The share of expenditure on transport equipment increased to 13.1 per cent in 2009 from 11.6 per cent in 2008 mainly due to significant increases of 83.0 per cent and 33.1 per cent recorded in the import value of non-industrial and industrial transport equipment, respectively.

Direction of Trade 7.20. Tables 7.12, 7.13 and 7.14 summarize Kenya's direction of trade. The country's total exports remained at the 2008 level. Exports to European Union (EU) declined by 1.3 per cent in 2009. The share of exports to European Union reduced slightly from 25.9 per cent in 2008 to 25.5 per cent during the period under review. The key commodities exported to the EU were horticultural products, tea and coffee. Total exports to the African region marginally increased by 0.1 per cent compared to a 31.1 per cent growth in 2008 and accounted for 47.2 per cent of all exports during the review period.

7.21. Exports to Asia accounted for 17.2 per cent of all exports. Major exports to Asia in 2009 were tea, crude minerals, metallic salts of inorganic acids and, electrical machinery and apparatus. The value of exports to the Middle East increased by 21.1 per cent to stand at KSh19,300 million in 2009. Exports to United Arab Emirates which declined by 12.4 per cent in 2008 increased by 41.7 per cent to reach KSh 10,716 million in 2009. Exports to Iran however declined by 24.8 per cent. Total exports to the Far East declined slightly from KSh 41,310 million in 2008 to KSh 39,935 million in 2009. Major declines were also noted in the exports to India and Indonesia. However, the value of exports to South Korea, Singapore and China rose remarkably by 24.6, 23.2 and 22.5 per cent, respectively.

7.22. Despite Asia being a major source of imports, a 5.7 per cent decline in the value of imports was recorded from the region in the review period compared to a growth of 40.3 per cent in 2008. The share of imports from Asia declined from 60.8 per cent in 2008 to 56.1 per cent during the review period. Imports from Middle East declined by 18.9 per cent compared to an increase of 41.6 per cent recorded in 2008. The value of imports from Iran and Israel which recorded increases of 95.8 per cent and 86.6 per cent in 2008 dropped by 1.7 per cent and 37.3 per cent, respectively, during the review period. The drop in imports from Israel is partly explained by the decrease in the imports of pre-fabricated buildings, auxiliary plants and structures. Imports of sugar and petroleum oils from Saudi Arabia recorded notable increases during the period under review. Imports from Far East Asia rose by 2.9 per cent compared to a 39.5 per cent growth in the previous period. This was mainly driven by declines in the imports of motor vehicles, medicants, industrial machinery and, crude and refined vegetable fats. In 2009, remarkable rises in imports were noted for Pakistan, South Korea and China with increases of 38.0, 29.9 and 17.4 per cent, respectively. The increase in the imports from Pakistan was mainly due to importation of rice while that from South Korea was due to imports of flat-rolled products of iron and steel. On the other hand, major imports from China comprised mainly telecommunications equipment, office machinery, industrial machinery, motor cycles, rubber tyres and, flat-rolled products of iron and steel. During the year under review, imports from Indonesia and India deteriorated by 18.1 per cent and 8.1 per cent, respectively. The decline in imports from Indonesia was mainly due to a reduction in the imports of crude and refined vegetable fats while that from India was attributed to declines in the imports of medicants and, industrial machinery and equipment.

7.23. Imports from European Union increased by 4.3 per cent in 2009 compared to a 10.0 per cent increase recorded in 2008. Imports from United Kingdom increased by 31.9 per cent in the review period reversing the decline recorded in 2008. Notable declines were recorded in imports from Finland, Germany, Belgium and Sweden. The imports from Finland declined on account of decreases recorded in imports of rotating electric plants and parts while decreases in the imports from Sweden dropped due to a decrease in the value of imports of mechanical handling equipment. The drop in imports from Belgium is partly explained by a

decrease in the imports of telecommunication equipment. On the other hand, imports from Germany declined resulting from a reduction in the imports of flat rolled products of iron.

7.24. The share of the value of imports from Africa to the total imports rose from 11.2 per cent in 2008 to 13.3 per cent in the period under review. The value of imports from Africa increased by 21.7 per cent to stand at KSh 104,672 million in 2009. In particular, imports from South Africa rose by 51.1 per cent from KSh 46,691 million in 2008 to KSh 70,561 million in 2009 due to increased imports of unmilled maize from KSh 5,570 million in 2008 to KSh 23,636 million in 2009.

7. 25. The value of imports from America rose by 49.0 per cent compared to a decline of 21.4 per cent in 2008. The value of imports from the United States of America which had dropped by 38.1 per cent in 2008 shot up by 81.7 per cent in 2009. This was due to an increase in the imports of chemical fertilizers, aircrafts and associated equipment and un-milled maize. Imports from Canada rose by 35.5 per cent during the same period, compared to a 56.2 per cent increase in 2008. This could be attributed to the increase in the value of imports of aircraft and associated equipment.

¹Rwanda and Burundi joined EAC in July 2006²Excluding member countries Uganda, Rwanda & Burundi

7.26. Exports to the Common Market for Eastern and Southern Africa (COMESA) increased marginally by 1.5 per cent but remained the main export destination for Kenyan exports to the African region. The share of exports to COMESA increased marginally to 69.5 per cent compared to 68.5 per cent in the previous period. Exports to Libya, Zimbabwe and Eritrea more than doubled while those to Madagascar, Mauritius and Burundi increased significantly by 68.5, 40.0, and 32.1 per cent, respectively. The value of exports to Namibia, Egypt, Angola, Malawi and Zambia declined by 27.8, 23.3, 21.9, 21.2 and 12.1 per cent, respectively. Exports to the East African Community (EAC) rose by 7.8 per cent accounting for 55.6 per cent of all exports to African countries, during the review period.

7.27. Despite the increase in the value of imports from Tanzania, Rwanda and Burundi, the overall value of imports from the EAC region declined due to the reduced value of imports from Uganda. Major import commodities from Tanzania were textile materials and, paper and paperboards. Imports from COMESA declined by 10.5 per cent from KSh 28,272.3 million in 2008 to KSh 25,294.5 million in 2009. The share of imports from COMESA decreased from 32.9 per cent in 2008 to 24.2 per cent during the review period. Imports from Madagascar increased from KSh 29.3 million in 2008 to KSh 478.0 million mainly due to the importation of liquefied propane and butane. Kenya's imports from South Africa rose significantly from KSh 46,690.9 million in 2008 to KSh 70,561.1 million during the review period on account of imports of unmilled maize to the tune of KSh 23,635.8 million against KSh 5,569.6 million imported in the previous period. Imports from Algeria dropped from KSh 386 million in 2008 to KSh 3.6 million in the review period owing to a drop in the imports of portland cement. The value of imports from Somalia dropped significantly from KSh 30.2 million in 2008 to KSh 1.7 million in 2009 due to a decline in the imports of sesame seeds and, raw hides and skins.

Balance of Payments 7.28. During the review period, overall balance of payments improved to a surplus of KSh 75,180 million from a deficit of KSh 33,161 million in 2008 as indicated in Table 7.15. This was on account of increased short and long term capital inflows and a reduction in the merchandise trade deficit compared to the previous period. The current account balance improved from a deficit of KSh 137,147 million in 2008 to a deficit of KSh 124,446 million in 2009. The capital and financial account improved from a surplus of KSh 83,197 million in 2008 to KSh 215,864 million in 2009. This could be attributed to increased inflows of foreign direct investment and capital. The invisible trade rose from a surplus of KSh 253,637 million in 2008 to a surplus of KSh 261,609 million in 2009. This can be partly explained by the increase in current transfers.

7.29. The deficit on current account which is financed by capital and financial account narrowed down from KSh 137,147 million in 2008 to KSh 124,446 million in 2009. This is partly explained by the decrease in the visible trade deficit from KSh 390,784 million in 2008 to KSh 386,055 million in 2009. Current transfers increased from KSh 161,265 million in 2008 to stand at KSh 177,667 million in 2009. This impacted positively on the invisible trade which recorded a surplus of KSh 261,609 million in 2009 up from a surplus of KSh 253,637 million recorded in 2008. This is attributable to a 3.8 per cent increase in private current transfers from a surplus of KSh 147,656 million in 2008 to a surplus of KSh 153,212 million in 2009.

7.30. The capital and financial account recorded a surplus of KSh 215,864 million in 2009 up from a surplus of KSh 83,197 million recorded in 2008. This was occasioned by increased

inflows from short and long term investments and foreign direct investment. Whereas total short and long term inflows increased from KSh 74,309 million in 2008 to KSh 189,986 million in 2009, foreign direct investment inflows more than doubled to KSh 7,312 million in 2009 from KSh 3,585 million in 2008. The net deficit in portfolio investment account narrowed marginally from a deficit of KSh 1,805 million in 2008 to a deficit of KSh 1,612 million in 2009.

¹ Official reserves are now defined to exclude commercial banks' foreign assets.

7.31. Table 7.16 presents changes in balance of payments accounts. In 2009, earnings from exports of goods shrunk by KSh 401 million while imports of goods bill decreased by KSh 5,129 million. Net services and income increased by KSh 10,605 million in 2009 against an increase of KSh 17,273 million recorded in 2008. The reduction in net changes was on account of the significant decline in net earnings from government services and income. Net earnings from tourism rose by KSh 1,334 million in the review period, reversing the decline observed in 2008. These changes in the current account resulted in a surplus of KSh 31,736 million in 2009 from a deficit of KSh 67,671 million recorded in 2008. The surplus in the basic balance indicates improvement of Kenya's overall balance of payments position and the accumulation of international reserves.

⁺ Revised

1. A positive entry indicates a change that improves the balance of payments outcome; a negative entry indicates a change worsening the BOP outcome. Thus, an increase in imports or reduction in exports

International Liquidity 7.32. Foreign Assets of Monetary Authorities for the period 2005-2009 are presented in Table 7.17. These assets consist of foreign exchange reserves held by the Central Bank of Kenya (CBK) and Treasury. The Central Bank continued to build up foreign reserves from KSh 221,548 million in December 2008 to KSh 260,161 million in December 2009. The accumulation of reserves resulted from interbank purchases and the balance of payments support under the Exogenous Shock Facility, to mitigate against the adverse effects of the global economic recession. Net Foreign Assets of the Central Bank rose from KSh 198,105 million as at December 2008 to KSh 220,770 million as at December 2009. The position in the reserve fund deteriorated by 3.6 per cent from KSh 1,512 million as at December 2008 to KSh 1,489 million as at December 2009 while Special Drawing Rights (SDRs) halved to KSh 119 million as at December 2009.

7.33. Foreign liabilities to the Central Bank comprising External Banks' Deposits and Use of Bank Credit increased from KSh 2,355 million and KSh 19,535 million as at December 2008 to KSh 3,753 million and KSh 34,109 million as at December 2009, respectively. Foreign exchange holdings of the Central Bank increased significantly by 17.6 per cent from KSh 219,757 million as at December 2008 to KSh 258,514 million as at December 2009.

¹Reserves constitute foreign assets which are readily available for meeting external financial needs

7.34. Table 7.18 indicates the foreign exchange rates for the Kenya Shilling against selected currencies. Overall, the Kenya Shilling depreciated marginally against major world currencies as reflected by the trade weighted exchange rate index which rose to 718.19 as at December 2009. It strengthened against the Japanese Yen and the US Dollar by 4.7 per cent and 2.4 per cent, respectively. In addition, the Kenya Shilling appreciated marginally against the Euro and the Danish Kroner by 0.5 per cent and 0.3 per cent, respectively, as at December 2009. However, the Kenya Shilling weakened notably against the Australian Dollar, South African Rand, Norwegian Kroner, Canadian Dollar and Sterling Pound by 26.4, 23.6, 18.6, 12.9 and 8.5 per cent, respectively. Further, the Kenya Shilling depreciated by 1.0 per cent against the Indian Rupee. The Kenya currency lost against the Uganda Shilling but strengthened against the Tanzania Shilling by 0.2 per cent and 4.7 per cent, respectively.

³Countries in the Euro area included in the computation of the Trade Weighted Fischer's Ideal Index are Germany, France, Switzerland, Netherlands,Austria,Belgium, Finland and Italy.

Developments in International Trade

Trade Information

7.35. The Export Promotion Council through the Centre for Business Information in Kenya (CBIK) continued to empower Kenyan exporters by sourcing, collating and disseminating trade information and carrying out business counselling services. The CBIK subscribed to new trade information sources in order to improve on quality and comprehensiveness. These include Interdata, Kompass, Euro monitor and Piers databases. The databases contain a directory of international importers and will enable exporters to access market intelligence.

E- Trade services

7.36. Global dynamism in information technology has prompted business firms to adopt e-commerce strategies to market their goods and services and to transact online. In Kenya, the need for e-trade interventions has been necessitated by the realization that most SMEs with export quality products have difficulties accessing the international market. The Export Promotion Council (EPC), with the support of United States Agency for International Development (USAID), and the Commonwealth Secretariat (COMSEC) developed and commissioned websites for 124 SME exporters. The websites have exposed the beneficiary firms to the vast opportunities availed through enhanced international visibility for their products and ease of transacting business.

Market Prioritization and Product Prioritization Framework

7.37. A structured market prioritization framework was developed to facilitate the selection of export markets, based on empirical data. The prioritization involved the analysis and ranking of Kenya's existing and potential export markets. A product prioritization framework based on the same principles was also developed to market the country's export products.

Trade Fairs and Exhibitions, and Contact Promotion Programmes

7.38. Under the export market development component, the EPC's goal is to identify market opportunities and formulate appropriate export entry strategies for market consolidation and expansion in traditional markets, and diversification into emerging export markets. In this regard, the Council carried out various activities such as market research and investigations, trade fairs and exhibitions, and also conducted promotion programmes. The Council organized and facilitated participation of Kenyan exhibitors in international trade fairs in Zambia, Malawi, Tanzania, Uganda, Egypt, Rwanda, Sudan, Mozambique, DRC, China and USA. The council also facilitated in-coming trade missions that included Sweden Trade delegation and AGOA Trade Forum and the out-going trade missions in South Africa, South Korea and DRC. During these events, the competitiveness of Kenyan products was assessed, agents and distributors appointed, consumer trends studied and joint venture opportunities identified.

Product Development and Adaptation

7.39. Under the Small and Medium Enterprises Development initiative, the Council provides assistance aimed at strengthening export supply base and mainstreaming MSMEs in export processes. This is achieved through the establishment of Export Production Villages (EPVs) and capacity building programmes for SME exporters. The Council established 11 women and youth Export Production Villages (EPVs) in Commercial crafts and textile (hand-woven and hand loomed products) sectors during the year. The EPVs are aimed at empowering producer clusters to diversify and effectively market their products.

SEEP/ EPC Value Chain Project in Western Kenya for Passion Fruit

7.40. The project proposal submitted by the EPC to Small Enterprise Education Programme (SEEP) was accepted in March 2009. The project seeks to improve the passion fruit value chain by increasing the efficiency of the market linkages by helping small scale farmers in Western Kenya form Export Production Villages.

SME Training

7.41. The EPC in collaboration with donor agencies provided training to exporters to enable them respond effectively to opportunities in the export market. So far, over 2,000 exporters have been trained in various areas including export marketing, costing and pricing, product development and adaptation, export logistics and finance. Training of Trainers from both the public and private sector was carried out to build a reservoir of trainers in various fields within the export sector.

CHAPTER 8

Agriculture

Overview

The global economic recession and drought in various parts of the country resulted in lower aggregate agricultural output in 2009. As a consequence, prices of most agricultural commodities recorded an upward trend in response to the decline in production. Performance of the sector continued to decelerate albeit at a slower pace from a revised growth of negative 4.3 per cent registered in 2008 to negative 2.7 per cent in 2009. The aggregate value of marketed crops went up by 3.3 per cent from KSh 148,227.5 million in 2008 to KSh 153,178.9 million in 2009, on account of increased sales of permanent and temporary industrial crops. The value of livestock and products increased by 16.3 per cent from KSh 30,629.1 million in 2008 to KSh 35,620.1 million in 2009. However, the value of marketed cereals declined by 13.4 per cent from KSh 13,398.4 million in 2008 to KSh 11,604.0 million in 2009 due to reduction in the quantity of marketed maize. Over the same period, the value of marketed horticultural produce declined by 14.9 per cent to KSh 49,352.2 million mainly due to lower prices for cut flowers and fruits and reduced demand as a result of the global economic downturn.

8.2. In 2009, the country was about 60.0 per cent reliant on domestic production of its food requirements. The Self Sufficiency Ratio (SSR), a ratio of the quantity of food commodities produced locally in relation to total food available, for the year was estimated at 58.7 for vegetable products and 100.5 for animal products. The average per caput supply of calories which was estimated at 1,790 in 2008 increased to 1,797 calories per person per day in 2009. The Import Dependency Ratio (IDR), which compares the quantities of food commodities imported with the total food supply available for domestic consumption, stood at 42.2 per cent in the year under review.

8.3. The drought experienced in the year under review affected maize production resulting in production of 27.1 million bags in 2009. A total of 1,507 thousand tonnes equivalent to 16.8 million bags of maize valued at KSh 33,944.8 million were imported in the same year. Wheat production and imports increased by 49.9 per cent and 45.2 per cent to 129.2 thousand tonnes and 781.7 thousand tonnes, respectively, in 2009. Coffee production increased by 35.7 per cent from 42.0 thousand tonnes in 2007/08 crop year to 57.0 thousand tonnes in 2008/09 crop year. Despite the area under tea expanding, production continued to fall, recording a decline of 9.2 per cent from 345.8 thousand tonnes in 2008 to 314.1 thousand tonnes in 2009. This was a result of inadequate rainfall in the tea growing zones. The volume of marketed milk increased by 2.0 per cent from 399 million litres in 2008 to 407 million litres in 2009. The slight increase in milk intake can be attributed to the improved milk production in the fourth quarter of 2009.

Agricultural Output and Input

8.4. Table 8.1 presents details of the agricultural output and input. In 2009, production at current prices continued to expand growing by 11.0 per cent from KSh 600,883 million in 2008 to KSh 667,171 million in 2009. Consequently, value added increased but at a reduced rate of 18.2 per cent in 2009 compared to 19.2 per cent in 2008. On the other hand, output at constant prices decelerated by 2.2 per cent in 2009, a slower rate than the 4.0 per cent recorded in 2008. Over the last four years, the agriculture sector value added has been declining albeit with some reversal from a revised negative 4.3 in 2008 to negative 2.7 in 2009 as shown in Figure 8.1.

Figure 8.1: Agriculture Gross Value Added (GVA) Growth Rate, 2005 - 2009

Marketed Production 8.5. Table 8.2 shows the value of marketed production in the agricultural sector for the period 2005 to 2009. The total value of marketed production at current prices increased marginally by 5.6 per cent from KSh 178,856.6 million in 2008 to KSh 188,799.0 million in 2009. Tea, sugarcane, coffee and wheat contributed to the increase in the value of marketed crop output. The aggregate value of marketed crops increased by 3.3 per cent from KSh 148,227.5 million in 2008 to KSh 153,178.9 million in 2009. The value of livestock and products increased by 16.3 per cent from KSh 30,629.1 million in 2008 to KSh 35,620.1 million in 2009.

* Provisional.

8.6. The total value of marketed cereals dropped significantly during the year, reducing from KSh 13,938.4 million in 2008 to KSh 11,604.0 million. This was mainly driven by the 45.2 per cent decrease in the value of marketed maize. This decline was occasioned by the reduced sales of maize grain to the National Cereals and Produce Board (NCPB) and grain millers during the year. At the same time, the value of marketed horticultural produce declined by 14.9 per cent from KSh 57,965.8 million in 2008 to KSh 49,352.2 million in 2009, as a result of the lower value of cut flower sales which decreased by KSh 8,950.9 million in the same period. Despite reduced production, higher tea prices during the review year resulted in the value of marketed tea rising by 16.8 per cent from KSh 55,383.1 million in 2008 to KSh 64,684.8 million in 2009. During the same period, the value of marketed coffee and dairy produce rose by 39.4 and 37.4 per cent, respectively. Each of these commodities registered increased production and higher prices during the year.

8.7. Table 8.3 gives quantum and price indices for sales by broad commodity groups to marketing boards. In 2009, the quantum indices for cereals, horticultural produce and permanent crops declined significantly, leading to a notable reduction in the overall quantum index for crops. The quantum index for livestock products increased from 171.0 in 2008 to 179.5 in 2009 driven by higher milk sales to formal establishments and larger livestock disposals in response to the drought experienced in the Arid and Semi Arid Lands (ASALs) during the year. The overall price index for agricultural marketed production rose from 130.2 in 2008 to 147.2 in 2009. This is as a result of higher prices for several commodities, notably coffee, tea, sugarcane and dairy produce among others.

¹ Data on livestock is from slaughter houses

8.8. Commodity price movements present an important indicator for the performance of the agriculture sector. Table 8.4 details average gross commodity prices for the last five years. Most of the commodities reported higher prices during the year. Coffee, tea and sugar cane have significant shares in the value of the country's agricultural production. Each of these crops registered substantially higher gross prices during the year except maize, wheat and sisal. Similarly, each of the livestock products recorded higher prices. The price of pyrethrum remained at the same level observed in the previous year. The higher prices of the agricultural commodities were driven by reduced supply rather than increased demand.

Table 8.4: Average Gross Commodity Prices¹ to Farmers, 2005 -2009

KSh per stated unit						
	UNIT	2005	2006	2007	2008	2009*

* Provisional.

¹ The prices are for calendar year & may differ from those based on crop years. In the case of tea and coffee, the prices are for black tea and processed coffee respectively.

8.9. Table 8.5 shows the share of sales to marketing boards by large and small farms for the last five years. The sale by large farms increased by 4.8 per cent from KSh 48,148 million in 2008 to KSh 50,447 million in 2009. Similarly, sale by small farms increased by 5.8 per cent from KSh 130,709 million in 2008 to KSh 138,352 million in 2009. The small farms' value of marketed produce continued its dominance over the review period, contributing more than double the value sold by the large farm sector.

Table 8.5: Sale to Marketing Boards from Large and Small Farms, 2005 -2009

YEAR	LARGE FARMS		SMALL FARMS		TOTAL		PERCENTAGE SHARE OF SMALL FARMS
	KSh million	Annual Percentage change	KSh million	Annual Percentage change	KSh million	Annual Percentage change	
2005	34,828	5.3	98,308	9.0	133,136	8.0	73.8
2006	38,860	11.6	110,813	12.7	149,673	12.4	74.0

2009*	50,447	4.8	138,352	5.9	188,799	5.6	73.3

* Provisional.

8.10. The agriculture sector quantum and price indices for input decreased notably by 27.2 and 7.7 percentage points, respectively, in 2009 as shown in Table 8.6. The negative effects of drought experienced in the year leading to decreased utilisation of inputs partly explain the drop in the inputs quantum index. During the year under review, the Government provided fertiliser and maize seeds at subsidised prices to farmers. This is reflected in the increase in the quantum index for fertiliser. The provision of subsidised fertiliser resulted in an overall decline in the price index from 235.7 in 2008 to 197.6 in 2009. The overall price index for fuel and power rose from 178.9 in 2008 to 183.0 in 2009 as a result of increased price of electricity. The continued persistence of the drought phenomenon resulted in increased use of manufactured feeds by farmers. Consequently, the quantum index for manufactured feeds increased from 341.9 in 2008 to 367.7 in 2009.

Table 8.6: Agricultural Input Indices, 2005 - 2009

* Provisional.

8.11. The total costs incurred in purchasing various inputs in the agricultural sector, as shown in Table 8.7, rose by 23.5 per cent to KSh 32,288 million in 2009 from KSh 26,135 million in 2008. This rise could largely be explained by increase in prices of electricity, which made the value of fuel and power consumed in the sector to rise significantly by 34.5 per cent from KSh 7,262 million in 2008 to KSh 9,770 million in 2009. The expenditure on livestock drugs and medicines more than doubled while the value of manufactured feeds increased by 14.3 per cent in 2009, partly as a result of increased usage due to drought. Farmers on the other hand benefited from subsidised prices of seeds and fertiliser. Consequently, the value of fertiliser reduced by 8.0 per cent from KSh 6,160 million in 2008 to KSh 5,665 million in 2009, while that of purchased seeds declined by 13.0 per cent during the review period.

8.12. After a two year deterioration of agriculture terms of trade, 2009 marked an improvement of the index by 5.6 percentage points to 66.8 percentage points from 61.2 points reported in 2008, as shown in Table 8.8. This was as a result of both the price index of consumer goods and inputs increasing by 6.4 percentage points between 2008 and 2009 and the index of output prices rising by 14.8 percentage points in the same period. The price index of purchased inputs reduced by 4.6 per cent from 165.7 points in 2008 to 158.0 points in 2009, while the index for purchased consumer goods rose by 20.6 percentage points from 205.3 points in 2008 to 225.9 points in 2009.

8.13. Table 8.9 shows estimates of production of major food security crops for the last five years. After a two year consecutive decrease in maize production, 2009 registered a marginal increase of 4.2 per cent to 27.1 million bags from 26.0 million bags recorded in 2008 due to Government intervention in the provision of cheaper inputs. Potato production decreased sharply by 50.0 per cent from 0.8 million tonnes in 2008 to 0.4 million tonnes in 2009. This was as a result of inadequate rainfall received during the long rains season, which accounts for the bulk of annual potato production. However, there was improved performance in production of beans, millet and sorghum by 79.3 per cent, 50.0 per cent and 83.3 per cent, respectively.

Table 8.9: Estimated Production of Selected Agricultural Commodities, 2005 - 2009

* Provisional.

8.14. Table 8.10 shows the average retail prices for selected food crops. For the second consecutive year, high prices were reported in the country especially in the month of March on account of continued low food supply resulting from low domestic production. At the regional level, all the stated crops except potatoes and beans, recorded increased prices in the month of March 2009 compared to the same month in 2008. Eastern province recorded the highest percentage price increase for all the reported food crops except beans, in the month of March 2009 compared to the same month in 2008.

8.15. At the national level, maize recorded the highest absolute price increase from KSh 19.8 per Kg in March 2008 to KSh 32.5 per Kg in the same month in 2009. At the regional level, the highest price for beans, millet and sorghum were observed in Western province in March 2009, while Eastern province recorded the highest price for same crops in September 2009. Coast province recorded the highest price for potatoes for the months of March and September in the year under review. The highest price for maize was reported in Rift Valley province in the month of March and in Central for the month of September 2009.

8.16. Sales of agricultural produce to various marketing boards for the last five years are as recorded in Table 8.11. Poor performance of the agricultural sector in the year under review is apparent from the volume of sales of most commodities. For the second consecutive year, the sale of maize to marketing boards recorded the highest percentage decline of 43.9 per cent from 340.5 thousand tonnes in 2008 to 191.0 thousand tonnes in 2009. The quantity of maize sold in 2009 shows a notable decrease of 62.5 per cent from the quantity sold in 2007, when the highest sales were recorded. This was as a result of reduced production of maize due to drought in 2009. The reduced production of tea in 2009 led to the quantity sold to drop

substantially by 12.0 per cent. Wheat, coffee and sugarcane, which had recorded reduced sales in year 2008, reported increased sales of 49.9, 26.4 and 9.8 per cent, respectively in 2009. The decline in sales of rice paddy continued for the third consecutive year, with the quantity sold in 2009 reducing by 7.0 per cent compared with the sales for the previous year. Cotton sales registered a significant drop of 18.5 per cent in 2009, which is approximately equal to the decline experienced in 2008. The quantity of pyrethrum sold reduced considerably by 44.0 per cent while that of sisal reduced marginally by 3.2 per cent in the year under review.

8.17. Wheat: The production and imports of wheat for the last five years are as shown in Table 8.12. Wheat production registered an improved performance from 86.2 thousand tonnes in 2008 to stand at 129.2 thousand tonnes in 2009. Imports of wheat also increased to 781.7 thousand tonnes in 2009 from 538.5 thousand tonnes in 2008.

Table 8.12: Production and Imports of Wheat, 2005 - 2009

2008	86.2	538.5	624.7
2009*	129.2	781.7	910.9

* Provisional.

¹ Includes retention for seed.

8.18. Coffee: The production of coffee, area planted and average yield are presented in Table 8.13. The sub-sector registered a significant increase in production of 35.7 per cent during the 2008/09 crop year from 42.0 thousand tonnes in 2007/08 to 57.0 thousand tonnes. Coffee production from co-operatives and estates increased by 44.8 and 25.4 per cent, respectively in 2008/09. This increase was attributed to favourable weather in the coffee growing areas. Other factors which contributed to this production increase includes better coffee husbandry practices, financing by the Coffee Development Fund which facilitated procurement of inputs and debt waiver of KSh 3.2 billion which motivated the growers.

Table 8.13: Production, Area, and Average Yield of Coffee by Type of Grower, 2004/05 - 2008/09

Co-operatives	199.2	211.3	235.0	189.0	269.6
Estates	469.0	506.0	595.0	532.0	616.0

Source: Coffee Board of Kenya

8.19. In the year under review, estates and cooperatives increased the area under coffee bushes by 8.1 and 1.7 per cent, respectively. Similarly, the acreage under coffee in the country increased from 155.0 thousand hectares in 2007/08 to 160.0 thousand hectares in 2008/09. The average yield of coffee in the co-operative subsector was 269.6 Kg/Ha, while the one for estates was 616.0 Kg/Ha.

8.20. **Tea:** The performance of the tea sub-sector is presented in Table 8.14. For a second consecutive year, the sub-sector reported production decline with 2009 recording a 9.2 per cent drop to stand at 314.1 thousand tonnes from 345.8 thousand tonnes in 2008. The smallholder sub-sector, which accounts for the bulk of the tea produced, recorded a drop of 18.2 per cent while the estates subsector registered a 4.8 per cent increase in production. The area planted with tea increased by 0.4 per cent from 157.7 thousand hectares in 2008 to 158.4 thousand hectares in 2009. The average yield for the smallholder decreased from 2,397 kg/ha in 2008 to 1,862 kg/ha in 2009 while that of the estates subsector increased from 2,768 kg/ha to 2,909 kg/ha in the same period. The main factor that led to lower production was adverse weather conditions characterized by inadequate rainfall, in the eastern part of the Rift Valley, where smallholder subsector is predominant. During the period under review, the volume of tea exports decreased by 16.3 per cent to 326.5 thousand tonnes as compared to 390.0 thousand tonnes in 2008.

8.21. Sugarcane: As shown in Table 8.15, sugarcane production increased by 9.8 per cent from 5.1 million tonnes in 2008 to 5.6 million tonnes in 2009. This increment was attributed to the aggressive acquisition of cane by Kibos Sugar Company, prompt payment of farmers' proceeds and improved factory performance. A decline of 8.9 per cent in the area under sugarcane was observed in 2009 as a result of existence of over-mature cane in Sony sugar zone and contractual misunderstanding in Mumias zone. On the contrary, the area harvested increased by 20.8 per cent in the same year mainly due to dry weather which enabled continuous harvesting. The sugarcane yield decreased by 10.6 per cent from 72.9 tonnes per hectare to 65.2 tonnes per hectare in 2009.

Table 8.15: Area under Sugar Cane, Area Harvested, Production, and Average Yield, 2005 - 2009

¹ Does not include area harvested by non-contracted farmers

8.22. Sugar production, imports, consumption and exports are presented in Table 8.16. The country recorded increased domestic production of sugar from 517.7 thousand tonnes in 2008 to 548.2 thousand tonnes in 2009, which was the highest production ever achieved in the sugar industry. This was as a result of increased cane deliveries and rehabilitation of a section of the West Kenya Sugar Company. The sugar consumption also went up by 1.4 per cent from 751.5 thousand tonnes in 2008 to 762.0 thousand tonnes in 2009. Imports of sugar fell by 15.6 per cent to 184.5 thousand tonnes from 218.6 thousand tonnes during the period under review. On the other hand, exports of sugar decreased drastically from 44.3 thousand tonnes in 2008 to a mere 2.0 thousand tonnes in 2009 as a result of freezing of the sugar exports.

Table 8.16: Production, Imports and Consumption of Sugar, 2005 – 2009

8.23. Horticulture: Table 8.17 presents a five-year data series for the quantity and value of exports of fresh horticultural produce. The sub-sector recorded a reduction in the quantity of exports for the first time in five years. The quantity of exports of fresh produce decreased by 6.4 per cent between 2008 and 2009, reducing from 193.1 thousand tonnes to 180.8 thousand tonnes. At the same time, the value of exports reduced by 14.8 per cent to stand at KSh 49.4 billion in 2009. Despite weakening of the Kenya Shilling, the level of foreign exchange earnings from the sub-sector was greatly depressed by the direct effect of the decreased volume of cut-flower and vegetable exports during the year. The reduction in quantity of exports was mainly as a result of decreased demand for these products in the international markets occasioned by the global economic recession. Further, the sub-sector faced challenges of increased competition from other exporting countries.

Table 8.17: Exports of Fresh Horticultural Produce¹, 2005 - 2009*

YEAR	CUT FLOWERS		FRUITS		VEGETABLES		TOTAL	
	Volume	Value	Volume	Value	Volume	Value	Volume	Value
	'000 Tonnes	KSh billion	'000 Tonnes	KSh billion	'000 Tonnes	KSh billion	'000 Tonnes	KSh billion
2005	81.2	22.9	18.5	2.0	63.4	13.9	163.2	38.8
2006	86.5	23.6	15.4	1.7	61.3	17.8	163.2	43.1

Source: Horticultural Crops Development Authority

¹ Excludes exports of processed horticultural produce.

* Provisional.

8.24. Analysis further shows that the reduction in the quantity of exports was mainly driven by reduced exports of vegetables which dropped from 82.4 thousand tonnes in 2008 to 72.5 thousand tonnes in 2009. During this period, the volume of exported cut-flowers reduced by 6.6 thousand tonnes while that of fruits increased by 4.1 thousand tonnes. The large decrease in the volume of exported vegetables may be attributed to reduced demand in the market and increased competition from other producing countries.

8.25. Figure 8.2 presents a quarterly comparison of the value of exports of fruits, vegetables and cut-flowers. The value of vegetable exports declined in the first quarter but increased in the subsequent three quarters. This led to a marginal increase in the value of vegetable exports despite a large decrease in the quantity of exports, suggesting a substantial price increase for

the commodity. Comparing fruit exports between 2008 and 2009, the value decreased only in the third quarter, remaining stagnant in the fourth quarter after recording increases for the first two quarters. In 2009, the value of cut-flower exports remained below that of 2008 for all the quarters. For both years, cut-flowers recorded the highest value of exports during the first quarter.

Figure 8.2: Quarterly Value of Fresh Horticultural Exports, 2008 – 2009

8.26. Irrigation: Analysis of the irrigation sub-sector shows mixed performance where the total area cropped and the number of plot holders increased while the total quantity of paddy production declined substantially. As seen in Table 8.18, paddy production in Mwea Scheme, the largest producer, fell by 16.0 per cent, declining to 32,406 metric tonnes in 2009 from 38,560 metric tonnes in the previous year. This could partly be explained by the decline in number of plot holders in the scheme by 32.0 per cent during the year under review. Ahero Scheme resumed growing of rice to produce 2,939 metric tonnes of rice paddy in the review period while Bunyala Scheme doubled its paddy production. Overall, the quantity of paddy production declined by 7.2 per cent, dropping from 40,065 metric tonnes in 2008 to 37,198 metric tonnes in 2009. Crop production in the scheme areas was adversely affected by poor weather with some schemes facing the challenge of inadequate water for irrigation due to the prolonged drought witnessed in most parts of the country. However, the Government is in the process of expanding the area under irrigation by opening up new scheme areas and rehabilitating previously non-operational schemes. Consequently, the area under crop irrigation increased significantly from 9,092 hectares in 2008 to 10,072 hectares in 2009. The gross value of output from all scheme areas declined marginally from KSh 2,160 million to KSh 2,097 million over the same period.

8.27. Dairy Produce: Figures on production from the livestock sub-sector are presented in Table 8.19. In 2009, the volume of milk delivered to formal establishments recorded a slight increase but still remained below the level recorded two years ago. The quantity of recorded milk production increased marginally from 399 million litres in 2008 to 407 million litres in 2009. The volume of processed whole milk and cream increased by 9.2 per cent during this period, rising from 262 million litres in 2008 to 286 million litres in 2009. Similarly, production of cheese rose from 155 tonnes in 2008 to 188 tonnes in the period under review. At the same time, the production of butter and ghee declined to 1,074 tonnes from 1,218 tonnes in 2008, a decrease of 11.8 per cent.

8.28. Livestock products: As shown in Table 8.19, there was a substantial increase in the number of animals slaughtered during the year. The number of cattle slaughtered increased by 8.7 per cent, rising from 1,892 thousand in 2008 to 2,057 thousand in 2009. Over the same period, the number of goats and sheep slaughtered rose from 5,425 thousand to 5,716 thousand. The recorded upsurge in animal slaughtered was mainly as a result of increased disposal of livestock due to the prolonged drought that affected most parts of the country in 2009. The number of slaughtered pigs rose from 198 thousand in 2008 to 221 thousand in 2009.

8.29. Agriculture Training: Public institutions continue to play an important role of building capacity in the sector by offering training in various agriculture related courses. As seen in Table 8.20, there has been a persistent increase in the demand for agriculture-based training opportunities in the public universities for both diploma and degree courses. The number of students pursuing degree courses rose from 6,110 in 2008 to 6,735 in the review period, a difference of 625 students. Egerton University recorded an increase of 312 students. This was the largest increase in enrolment among the universities offering agriculture degree courses. At 21.4 per cent, Jomo Kenyatta University of Agriculture and Technology (JKUAT) recorded the highest percentage increase, with its enrolment rising from 734 students in 2008 to 891 students in 2009. Enrolment in agriculture courses shows a strong gender bias, with male students accounting for 67.0 per cent of all degree level agriculture training opportunities in the year.

8.30. Enrolment for diploma level training in Egerton University rose from 1,844 in 2008 to 2,244 students in 2009 while the number of trainees in Bukura Institute dropped substantially from 301 in 2008 to 191 students in 2009. The number of trainees in certificate level remained low but at the levels observed in the previous year. At the same time, enrolment in the animal health institutes has remained at the same levels over the years as a result of restrictions imposed by accommodation facilities and budgetary allocations. Attendance of short term courses in Naivasha Dairy Training School and Athi River Meat Training Institute registered modest increases over the review period.

8.31. Table 8.21 presents details on the number of cooperative societies and unions in the country. The cooperative movement continued to expand during the review period, with the overall number of unions and societies rising from 11,968 in 2008 to 12,407 in 2009. During the year, agricultural societies comprised 36.9 per cent of all societies and unions. Savings and Credit Societies registered the largest increase in the number of groupings, with its number rising by 278 from 5,350 in 2008 to 5,628 in 2009. The number of unions remained stable, increasing by only one union each year, over the last two years.

8.32. As shown in Table 8.22, the total value of sales of agricultural produce by co-operative societies increased substantially during the year, rising from KSh 6,577 million in 2008 to KSh 8,915 million in 2009. This increase in cooperative sales was mainly driven by sales from coffee and dairy sub-sectors whose sales rose by KSh 1,083 million and KSh 1,222 million, respectively. These sub-sectors reported increased production during the period under review. The value of sales from cooperatives dealing with pyrethrum declined by almost 30 per cent due to the decreased production reported for the crop in the year. Pyrethrum, cotton and milk recorded increases in their shares of cooperative sales out of the total marketed value of the crops while the share for sugar cane remained unchanged at 1.7 per cent. However, the share of coffee sales through cooperatives registered a decline of 4.4 percentage points between 2008 and 2009. Overall, the cooperative revenue share in the aggregate for selected commodities increased slightly from 23.7 per cent in 2008 to 25.3 per cent in 2009.

Analysis of Food Balance Sheet, 2006-2009

8.33. A Food Balance Sheet (FBS) is a statistical system of accounting for food supply and utilisation in a country. It gives a comprehensive picture of a country's food security situation over a specified period of time. The elements of food supply are production, imports, stocks and exports, while food utilisation comprises of food, food manufacture, feed, seed, waste and other uses.

8.34. The FBS applies three main indicators, namely Per Caput Food Supply, Self-Sufficiency Ratio (SSR) and Import Dependency Ratio (IDR). Per Caput Supply is a measure of the food available for human consumption during a specific reference period in terms of caloric value, protein and fat contents. The IDR compares the quantities of food commodities produced locally with those imported. This index indicates the extent to which a country depends upon imports. Similarly, the SSR is a ratio of the quantity of food commodities produced locally in relation to total food available. This index is a measure of Self sufficiency.

8.35. Table 8.23 presents key FBS indicators for the period 2006 to 2009. The country has experienced low food supply over the four-year period. The level of caloric supply is far below the Minimum Dietary Energy Requirement (MDER) of 2,250 Kilo-calories per adult equivalent per day as per the World Health Organization (WHO) and Food and Agricultural Organization (FAO) standards, notwithstanding that Per Caput Supply is a crude measure of energy requirement.

8.36. **Daily Per Caput Supply:** The average per caput supply of calories was estimated at 1,999 calories for the year 2006 which declined to 1,885 calories in 2007. This fell further to 1,790 calories in 2008 but improved slightly in 2009 to 1,797 calories per person per day. At the same time, the supply of proteins declined from 57 grams in 2006 to 51.6 grams in 2009, per person per day. Similarly, the per caput supply of fats decreased from 36 grams to 33.6 grams over the same period.

Table 8.23: Summary of FBS Indicators, 2006-2009

INDICATOR		2006	2007	2008	2009*
Per caput Caloric supply (Kilo - Calories per day)	Total	1,999.0	1,885.0	1,790.0	1,797.0

* Provisional

Figure 8.3: Daily per Caput Supply of Calories

8.37. **Caloric supply by main food groups:** Vegetable (plant) products are more widely consumed than animal products. In 2009, vegetable products contributed over 90 per cent of calories and 80 per cent of proteins in the country's food supply. Cereals provide the highest share of calories in the country's diet, contributing more than 47 per cent of all caloric supply and more than 40 per cent of proteins in each of the years under review. Meat is the largest source of animal proteins and fats and contributes more than half of these nutrients. Figures 8.4 and 8.5 present the details on food supply by main groups for 2009.

Figure 8.4: Composition (%) of Caloric Supply by Main Food Groups, 2009

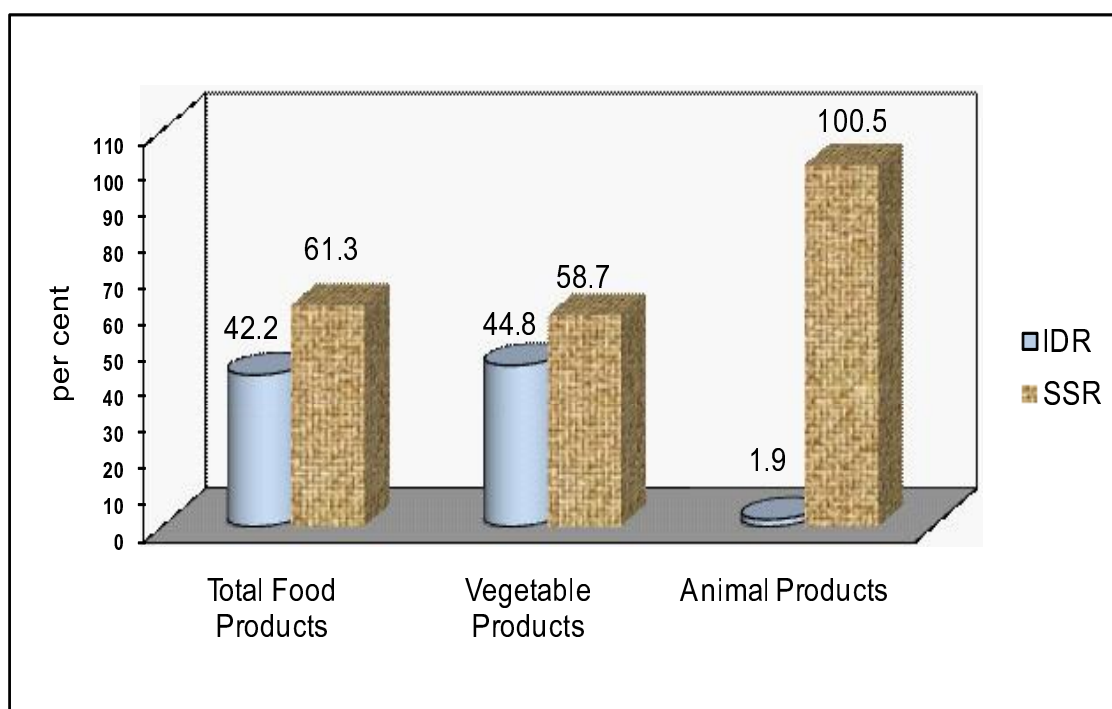

Figure 8.5: Composition (%) of Protein Supply by Main Food Groups, 2009

8.38. **Self Sufficiency Ratio and Import Dependency Ratio:** As shown in Figure 8.6, Kenya produced approximately 60 per cent of its food requirements in 2009. The country's SSR for the year was estimated at 58.7 per cent for vegetable products and 100.5 per cent for animal products. This means the country produces adequate supplies of animal products. On the other hand, the country imports a number of foodstuffs to supplement domestic production or in cases where a commodity is not available locally. Cereals, sugar and sweeteners, and vegetable products are the main commodities imported. In the period 2006-2009, the IDR for cereals rose from 19.8 in 2006 to a high of at 49.4 in 2009 as result of zero rating the maize imports. This indicates increasing reliance on cereal imports due to the reduced domestic production, especially maize.

Figure 8.6: Import Dependency and Self-Sufficiency Ratios, 2009

Tables 8.24 presents detailed information on the food balance sheets for the period 2006 to 2009.

Chapter 9

Environment and Natural Resources

Overview Kenya's economic growth depends partly on exploitation of natural resources and; environmental goods and services. In 2009, the Government through the Ministry of Environment and Mineral Resources continued to intensify environmental conservation to ensure a clean, secure and sustainable environment without compromising economic growth. Towards this end, the Government enacted the Mining and Minerals Act 2009 and started enforcement of the Environmental Management and Co-ordination Control Regulations, 2009.

9.2 Overall development expenditure on water supplies and related services is expected to increase from KSh 15,291 million in Financial Year (FY) 2008/09 to KSh 18,649 million in FY 2009/10. The quantity of fish landed in the country rose to 145.5 thousand tonnes in 2009 from 135.4 thousand tonnes in 2008. However, the quantity of mineral production declined by 9.4 per cent to 1,399 thousand tonnes in 2009. The population of most wildlife species declined due to severe drought conditions during the period under review. Forest plantation stocking also decreased from 114.0 thousand hectares in 2008 to 107.0 thousand hectares in 2009, mainly as a result of high planting failures and fire damages.

Water Supply 9.3. In 2009, the Ministry of Water and Irrigation continued with its fundamental goal of managing and increasing water supply with a view to ensuring optimal access to available water resources by all households. During the year, the water services boards undertook to develop the urban water supplies infrastructure while the National Water Conservation and Pipeline Corporation provided water schemes in the rural areas. The major works were mainly on expansion and upgrading of the existing water supply systems in the country.

9.4. In pursuit of the policy of provision of clean water to all households within a reasonable distance, the Government through the Ministry of Water and Irrigation continued to maintain a number of Water Purification Points (WPPs) across the country as shown in Table 9.1. During the year, the number of WPPs increased to 209 from 192 in 2008/09 following the construction and completion of 17 major water projects in Central, Eastern, Nyanza, Rift Valley and Western Provinces.

9.5. As shown in Table 9.1, the Ministry of Water and Irrigation in collaboration with other stakeholders in the sector drilled 124 boreholes compared to 115 drilled in FY 2008/09. The number of boreholes drilled in Eastern, Rift Valley and North Eastern Provinces were 36, 32 and 28 boreholes respectively. There was also a notable increase in the number of boreholes drilled in Coast Province during the same period.

9.6. To improve availability of water to all Kenyans especially in the rural areas, the Ministry of Water and Irrigation was also involved in the construction of dams across the country. The major dams under construction include Chemususu, Badasa, Kiserian, Umma in Koibatek, Marsabit, Kajiado and Kitui districts, respectively.

BH - Borehole (drilled by Government and private sector)

9.7. Development expenditure on water supplies and related services over the period FY 2005/06 to FY 2009/10 is shown in Table 9.2. There has been substantial increase in funding of the water sector by both the Government and Development Partners during the last five years. The overall expenditure is expected to rise from KSh 15,291 million in FY 2008/09 to KSh 18,649 million in FY 2009/10 mainly due to increased allocation to the National Water Conservation and Pipeline Corporation and, National Irrigation Board.

¹Funds re-allocated to water services boards since 2007/08

9.8. Expenditure on Water Development is expected to rise by 16.4 per cent from KSh 9,989.0 million in FY 2008/09 to KSh 11,631.6 million in FY 2009/10. Similarly, expenditure on the National Water Conservation and Pipeline Corporation is expected to increase by 39.9 per cent in 2009/10. At the same time, expenditure by National Irrigation Board is expected to more than double. The huge increase in budgetary allocation to the National Irrigation Board was for rehabilitation and expansion of the existing Irrigation schemes as envisioned in the Vision

2030 flagship projects initiative. However, Irrigation Development expenditure is expected to decline from KSh 630.0 million in 2008/09 to KSh 486.0 million in 2009/10.

Fisheries 9.9. The management and development strategy of Fisheries Department in the Ministry of Fisheries Development emphasizes maximisation of returns and utilisation of inland and marine resources. It also includes increased production and supply of fish to provide income and a cheap source of proteins to the rural communities.

9.10. The fishing industry has continued to record improved performance in earnings from fish landings over the last five years. In 2009, the overall quantity of fish landed increased by 7.5 per cent to 145.5 thousand tonnes from 135.4 thousand tonnes in 2008 as shown in Table 9.3. In 2009, the quantity of fresh water fish landed increased by 7.7 per cent to 136.5 thousand tonnes from 126.7 thousand tonnes in 2008. Similarly, Marine fish landings increased to 7.8 thousand tonnes in 2009 from 7.6 thousand tonnes in 2008.

9.11. Total earnings from fish landed rose from KSh 11,454 million in 2008 to KSh 12,013 million in 2009 attributed to increased fish landings and favorable domestic and export market prices. The value of freshwater fish increased from KSh 10,718 million in 2008 to KSh 11,233 million in 2009, accounting for 93.5 per cent of the total revenue generated from the fisheries sub-sector in 2009.

+ Revised

Forestry 9.12. Kenya recognises the vital role of afforestation in its development endeavor. This is evidenced by the intensified efforts by the government through Kenya Forest Service in the rehabilitation and conservation of the natural forests. Restoration of the Mau forest and the continued tree planting campaigns on individual farms were some of the achievements in the sub-sector in 2009.

9.13. As shown in Table 9.4, the forest plantation stocking decreased by 6.1 per cent from 114.0 thousand hectares in 2008 to 107.0 thousand hectares in 2009. The decline was mainly attributed to high planting failures and fire damages totaling 8.7 thousand hectares in 2009 compared to 1.0 thousand hectares in 2008. The area planted declined from 5.7 thousand hectares in 2008 to 3.5 thousand hectares in 2009 while the area clear felled slowed down from 3.0 thousand hectares in 2008 to 1.8 thousand hectares during the same period.

¹ Opening stock at the beginning of the year

9.14. Table 9.5 shows the recorded sale of forest products from 2005 to 2009. Total sale of forest products decreased by 28.6 per cent from 503.7 thousand true cubic metres in 2008 to 359.7 thousand true cubic metres in 2009. The reduced sale of timber was due to non production of forest products by Pan Paper Mills company which became insolvent in 2009. The recorded sale of softwood category declined considerably from 503.7 thousand true cubic metres in 2008 to 347.0 thousand true cubic metres in 2009. The recorded sale of hardwood category of forest products was 12.7 thousand true cubic metres in 2009 despite the total logging ban on this category. This was as result of clearance of hardwood category of forest to pave the way for the construction of water storage dams in various parts of the country.

Mining 9.15. Kenya's mining industry continued to be dominated by production of non metallic minerals comprising industrial minerals such as soda ash, fluorspar, diatomite and gemstones among others. During the year, the Government through the Ministry of Environment and

Mineral Resources enacted the Mining and Minerals Act 2009 which is expected to streamline activities within the sector. The new law requires all licensees to operate for four years with renewals of up to seven years in total.

¹ Quantities of production assumed to be equal to exports

9.16. As shown in Table 9.6, the quantity of mineral production declined from 1,545 thousand tonnes in 2008 to 1,399 thousand tonnes in 2009 mainly due to reduced production of soda ash and fluorspar in 2009. Production of soda ash and fluorspar declined from 503 thousand tonnes and 130 thousand tonnes in 2008 to 405 thousand tonnes and 6 thousand tonnes in 2009, respectively. The poor performance in fluorspar production was mainly attributed to the temporary closure of the fluorspar company in March 2009 due to the diminished commodity demand in the export market following the global economic downturn. However, production of crushed refined soda, diatomite, gold and gemstones increased in 2009 compared to the 2008 levels. The increased quantity of gemstones produced in 2009 was largely due to high demand for rough low grade compared to gemstone mined in the previous years.

9.17. Total earnings from mineral production decreased by 23.9 per cent from KSh 12,305 million in 2008 to KSh 9,370 million in 2009. The decrease was attributed to reduced production of the main minerals coupled with reduced export earnings from soda ash. The value for soda ash and fluorspar decreased to KSh 6,085 million and KSh 123 million in 2009 from KSh 8,882 million and KSh 1,949 million, respectively in 2008

Chapter 9: Environment and Natural Resources

9.18. The average export prices of soda ash and fluorspar are as shown in Table 9.7. Average price per tonne of fluorspar increased by 48.7 per cent to KSh 22.3 thousand in 2009 from KSh 15.0 thousand in 2008. However, the average price per tonne for soda ash declined by 24.9 per cent to KSh 13.9 thousand in 2009 from KSh 18.5 thousand in 2008.

Refuse Management 9.19. Table 9.8 shows the expenditure on public health by the Nairobi City Council. Total expenditure is expected to increase from KSh 490.5 million in FY 2008/09 to KSh 546.0 million in FY 2009/10. The bulk of the expenditure went into cleaning and administration which accounted for 68.9 per cent of the total public health expenditure budget. Expenditure on refuse removal increased marginally from KSh 158.4 million in FY 2008/09 to KSh 167.5 million in FY 2009/10.

Table 9.8: Expenditure on Public Health by the Nairobi City Council, 2005/06 -2009/10

Wildlife 9.20. Wildlife population estimates derived from aerial sample surveys data are given in Table 9.9. Over the period under review, the population of all wildlife herbivores decline except the Thomson's Gazelle, Grevy's Zebra, Kongoni, Warthog and Ostrich. The declines may be attributed to harsh and dry weather conditions during the period, predation, poaching of certain species, migration, and loss of habitat due to land fragmentation among other causes.

Table 9.9: Wildlife Population Estimates in the Kenya Rangelands, 2005 – 2009

Weather Patterns

9.21. The Long Rain (March to May) 2009 analysis indicates that most parts of the country experienced poor rainfall performance. The poor performance was reflected both in the amounts received and the distribution in time and space. The total rainfall (TOT) amounts received over most parts of the country were below 75 per cent of the Long Term Means (LTMs). However, Kisii station recorded total rainfall amounts 100mm higher than its long term mean. Stations in North Eastern and coast (except voi) provinces recorded highly depressed rainfall while Kitale and Nakuru stations recorded a near normal rainfall as shown in figure 9.1.

Figure 9.1: March-May 2009, Seasonal Rainfall Performance

TOT-Total rainfall

LTM- Long Term Mean

Figure 9.2: October-December (OND) 2009, Seasonal Rainfall Performance

Source: Kenya Meteorological Department

TOT-Total rainfall

LTM- Long Term Mean

9.22. Most parts of the country experienced enhanced rainfall during the October to December 2009 short rains season as shown in figure 9.2. Locations that experienced highly enhanced rainfall were: Lamu, Malindi, Msabaha, Mombasa, and Mtwapa along the coastal strip; Lodwar, Kitale and Eldoret in the North Rift valley; Nakuru and Nyahururu in the Central Rift; Mandera and Wajir in the Northern parts of the Country; Meru and Embu in Eastern; and Kisumu, Kericho and Kisii in Western parts of the country.

Developments in Environment and Natural Resource 9.23. Climate is a major driving factor for majority of economic activities in the country. During 2009, the Government through the Ministry of Environment and Mineral Resources initiated the formulation of the National Climate Change Response Strategy (NCCRS) in order to address the challenges posed by the current climate variability and change. The strategy seeks to inform nationwide climate change programmes culminating in the formulation of the national climate change policy.

9.24. The United Nations Climate Change Conference was held in [Copenhagen, Denmark](#), between 7th to 18th December 2009. The [Copenhagen Accord](#) recognized that climate change is one of the greatest challenges of the present day and that action should be taken to keep any temperature increases to below 2°C. The conference was held back to back with the 15th Conference of the Parties (COP 15) to the [United Nations Framework Convention on Climate](#)

[Change](#) and the 5th Meeting of the Parties (COP/MOP 5) to the Protocol.

9.25. During the year under review, the National Environment Management Authority (NEMA) began the implementation of the Environmental Management and Co-ordination (Noise and Excessive Vibration Pollution) Control Regulations, 2009. The new regulations cap noise levels to below 65 decibels during the day and 35 decibels during the night. When fully implemented, the new law is expected to curb noise pollution.

9.26. During the same period, NEMA continued to rehabilitate and restore the Nairobi River Basin with the aim of enhancing the ecological integrity and socio-economic value of the river basin. Activities in 2009 focused on removal of solid waste from illegal dumpsites within the river basin and the riparian reserve, clearing of the river channel and tree planting in cleared and cleaned areas. This work was also complemented by the engagement of the youth under the *Kazi Kwa Vijana* (KKV) initiative under the economic stimulus plan.

Chapter 10

Energy

Overview Volatility of international crude oil prices coupled with drought experienced in the better part of 2009 influenced domestic prices of petroleum products and electricity. During the period under review, the cost of electricity went up as a result of increased thermal power generation following a prolonged drought. The global oil demand declined sharply for the second consecutive year, with inventories and spare production capacity remaining very high by historical standards. This was mainly attributed to the deepening of the global economic recession. The month on month international prices for Murban crude oil, which is the main crude oil imported into Kenya, was lower in 2009 relative to 2008 except for the months of November and December.

10.2. The total quantity of petroleum products imported into the country went up by 17.6 per cent to 4,676.8 thousand tonnes in 2009. Similarly, the total quantity of petroleum products exported increased from 88.7 thousand tonnes in 2008 to 112.5 thousand tonnes in 2009. Imports of crude oil dropped by 8.2 per cent from 1,773.3 thousand tonnes to stand at 1,627.9 thousand tonnes in 2009. During the same period, the total value of petroleum products exported, including re-exports, increased by 14.7 per cent while the total import bill of petroleum products decreased by 20.7 per cent in 2009. Total domestic demand for petroleum products went up by 6.6 per cent in 2009.

10.3. Total electricity generation almost stagnated at the 2008 level. Hydroelectric power generation declined substantially by 35.0 per cent due to inadequate rainfall experienced in the last two years. However, electricity generation from thermal and geothermal sources rose by 39.7 and 24.5 per cent, respectively, in 2009.

Petroleum 10.4. The customer base under the Rural Electrification Programme (REP) expanded by 27.2 per cent to reach 205,287 as at June 2009. This was due to fact that the Government placed a premium on the energy sector in recognition of the pivotal role it plays in socioeconomic development. In addition, the sustained effort by the Kenya Power and Lighting Company (KPLC) to get as many rural households connected as possible, by allowing them to apply in groups, thus making it affordable, contributed to the increase.

10.5. Details of the quantity and value of imports and exports of petroleum products for the period 2005 to 2009 are presented in Table 10.1. The total quantity of petroleum products imported into the country increased by 17.6 per cent in 2009 compared to a growth of 7.7 per cent recorded in 2008. This was attributed to an increase in the imports of petroleum fuels which went up by 34.4 per cent in 2009. On the other hand crude oil imported into the country declined by 8.2 per cent in 2009 from 1,773.3 thousand tonnes recorded in 2008 to 1,627.9 thousand tonnes in 2009.

10.6. The value of imports of petroleum products declined by 20.7 per cent from KSh 198.7 billion in 2008 to stand at KSh 157.5 billion in 2009. The value of crude oil imported into the country dropped by 33.1 per cent from KSh 81.5 billion in 2008 to KSh 54.5 billion in 2009. Similarly, the value of imported petroleum fuels declined by 15.5 per cent compared to a significant increase of 59.3 per cent in 2008. Despite the increase in the quantity of

petroleum imports, the value of imported petroleum products decreased due to reduced oil prices in the international market. Total value of petroleum products exported rose by 9.5 per cent to stand at KSh 3,919.1 million in 2009 while that of re-exports increased by 18.2 per cent during the same period. The net balance of petroleum products declined by 22.4 per cent to attain a value of KSh 147.2 billion in 2009 compared to 189.7 billion in 2008.

¹ Excludes other light and medium petroleum oils, preparations and residual petroleum products not else where stated, which are included in Chapter 7

10.7. Table 10.2 presents the volume of crude oil intake at the Kenya Petroleum Refineries Limited (KPRL) by type for the last five years. The total volume of crude oil intake increased marginally from 1,582.7 thousand tonnes in 2008 to 1,605.0 thousand tonnes in 2009. Murban crude oil intake continued to be the main crude oil intake at the refinery accounting for 96.3 per cent of the total crude intake in 2009. Murban crude oil intake at KPRL increased by 15.8 per cent during the period.

Table 10.2: Crude Oil Intake at the Refinery by Type, 2005 - 2009

10.8. Details of finished petroleum products processed by KPRL are presented in Table 10.3.

Fuel oil, light diesel oil, and illuminating kerosene and jet /turbo fuel were the main products processed at the refinery accounting for 31.0, 23.2 and 22.4 per cent of the total throughput, respectively. Production of illuminating kerosene and jet /turbo fuel, light diesel oil and unleaded motor gasoline regular increased by 13.4, 6.3 and 2.1 per cent, respectively in 2009. During the same period, bitumen production was nearly insignificant which was reflected in the decline in Arabian medium crude oil intake at KPRL. To compensate for the substantial decline, a total of 45,295 tonnes of bitumen was imported during the year to meet the rising demand in construction activities, compared to 31,501 tonnes in 2008. Heavy and marine diesel oil, unleaded motor gasoline premium, Liquefied Petroleum Gas (LPG) and fuel oil, registered declines during the review period.

10.9. Table 10.4 depicts the supply and demand balance for petroleum products. Total domestic demand for petroleum products rose by 15.2 per cent from 3,133.2 thousand tonnes in 2008 to 3,610.8 thousand tonnes in 2009. There was increased demand for all petroleum products except aviation spirit, heavy diesel oil and LPG which declined by 44.0, 20.7 and 11.6 per cent, respectively. The increase in demand was driven by illuminating kerosene, light diesel oil, motor spirit, fuel oil and jet/turbo fuel. Light diesel oil continued to be the main type of fuel sold in the country, followed by fuel oil and jet/turbo oil.

10.10. Net domestic sales of petroleum fuels by consumer category for the five year period are presented in Table 10.5 and Figure 10.1. During the year under review, net domestic sales recorded an increase of 15.2 per cent compared to the previous year. All sectors of the economy recorded increased consumption during the period under review, except agriculture and rail transport which declined by 29.1 and 37.0 per cent, respectively. The retail pump outlets and road transport; and aviation sector continued to be the largest consumer of petroleum fuels, jointly accounting for 73.3 per cent of total domestic sales. Consumption in the aviation sector (excluding naval forces) recorded an increase of 4.5 per cent. This is associated with the recovery of the tourism sector. Under the power generation sector, consumption of petroleum fuels rose by 3.3 per cent to stand at 372.2 tonnes in 2009 from 360.4 tonnes in 2008. This was attributed to increased thermal power generation as a result of the prolonged drought. Industrial, commercial and other sub-sector recorded a growth of 18.3 per cent.

10.11. Average wholesale prices of petroleum products in Mombasa for the months of December are presented in Table 10.6. Wholesale prices for illuminating kerosene, LPG and light diesel oil registered declines of 21.3, 12.9 and 11.8 per cent, respectively. The decrease in fuel prices in 2009 could partly be attributed to decreased crude oil prices coupled with increased pressure from the Government for oil companies to lower prices in tandem with international oil prices.

Table 10.6: Wholesale Prices¹ of Petroleum Products in Mombasa, 2005 - 2009

10.12. Details of Murban crude oil prices in US\$/BBL at the international market for the last five years are presented in Table 10.7. International prices for Murban crude oil, which is the main crude oil imported to the country remained volatile during the period under review. The prices showed a generally upward trend fluctuating between a low of US\$ 44.95 per barrel in the month of February to a high of US\$ 78.60 per barrel in November.

10.13. Table 10.8 and Figure 10.2 give details of average retail prices of selected petroleum products in the country from January 2006 to December 2009. Retail prices decreased in tandem with decreased wholesale prices realized during the year under review. Significant decreases in pump prices were recorded during the year under review compared to 2008. The domestic price for motor spirit premium declined by 3.9 per cent from KSh 86.16 per litre in December 2008 to stand at KSh 82.84 per litre in December 2009. Similarly, diesel (gas oil) prices declined by 5.7 per cent from KSh 77.54 per litre to KSh 73.12 per litre while motor spirit regular and illuminating kerosene recorded decreases in December 2009 relative to December 2008. The prices of gas oil and illuminating kerosene peaked at KSh 75.57 per litre and KSh 68.00 per litre, respectively, in January 2009. The retail price of LPG per 13 Kg cylinder rose by 4.9 per cent to stand at KSh 1,936.56 in December 2009 up from KSh 1,845.46 in December 2008, associated with short supply reported in some months during the year.

Electricity 10.14. Details of installed capacity and generation of electricity by producer type are shown in Table 10.9 and Figure 10.3. Total installed capacity went up by a decelerated growth rate of 3.4 per cent in 2009 compared to an increase of 6.0 per cent in 2008. This was mainly as a result of increases in geothermal, hydro and thermal oil installations. The commissioning of Rabai Power Limited with capacity of 88.6 Mega Watts (MW), Orpower 4 geothermal plant with 35 MW and IberaAfrica thermal Power (E.A) Ltd with 52.5 MW, coupled with the upgrading of Kaburu power plants, enhanced the power supply capacity. Cogeneration installed capacity remained at the same level of 2.0 MW over the last four years.

10.15. Total electricity generation improved marginally from 6,455.6 Gigawatt hours (GWh) in 2008 to 6,468.8 GWh in 2009. There was a significant decline of 35.0 per cent in hydro power electricity generation due to inadequate rainfall in the last two years. In contrast, total generation from thermal oil and geothermal plants recorded accelerated growths of 39.7 and 24.4 per cent in 2009. The increase was necessary to compensate for the drop in hydro-power generation capacity. Thermal oil power accounted for 46.3 per cent of total electricity generation while hydro and geothermal sources accounted for 32.8 and 20.0 per cent, respectively, during the period under review.

10.16. Demand and supply balance details of electricity energy are shown in Table 10.10. Total Electricity consumption during the five year period shows an increasing trend as depicted in Figure 10.4. During the year, the demand for electricity registered a decelerated growth of 1.4 per cent, moving from 5,352.2 million KWh in 2008 to stand at 5,428.7 million KWh in 2009. Large commercial and industrial establishments continued being the largest consumers of electricity, accounting for 56.3 per cent of the total domestic consumption.

Domestic and small commercial consumption accounted for 37.9 per cent. Off-peak demand declined substantially by 44.4 per cent from 66.2 GWh in 2008 to stand at 36.8 GWh in 2009.

10.17. The demand for electricity for rural electrification registered a growth of 6.4 per cent in 2009. Electricity imports from Uganda and Tanzania went up significantly by 56.0 per cent from 25.0 GWh in 2008 to 39.0 GWh in 2009. Exports to Uganda declined by 34.1 per cent to stand at 27.0 GWh during the same period. Transmission losses and unallocated demand registered a decline of 1.5 per cent compared to a decline of 3.8 per cent realised in 2008, improving slightly to 16.2 per cent of the total demand.

10.18. Table 10.11 presents details of demand and supply of commercial energy expressed in terms of primary source. Consumption of coal and coke declined by 13.1 per cent in 2009 to stand at 94.6 thousand tonnes of oil equivalent. Total consumption of hydro and geothermal energy declined further by 20.3 per cent in 2009 to stand at 296.9 thousand tonnes of oil equivalent. This was due to a decline in local production of hydro power by 35.0 per cent in 2009. Total energy consumption rose by 10.7 per cent to stand at 4,002.3 thousand tonnes of oil equivalent in 2009 up from 3,614.2 thousand tonnes of oil equivalent in 2008.

Source: Kenya National Bureau of Statistics

* Provisional.

¹ Modern sector only; fuelwood and charcoal are excluded.

10.19. Local production as a percentage of total energy consumption dropped by 2.9 percentage points to stand at 7.3 per cent in 2009. Per capita energy consumption in terms of kilograms of oil equivalent went up by 4.2 per cent from 97.5 in 2008 to 101.6 kilograms of oil equivalent per person in 2009.

Rural Development in the Energy Sector

Electrification 10.20. During the period under review, Kenya Power & Lightning and Rural Electrification Authority (REA) implemented a total of 607 projects spread across all constituencies in the country at a total cost of KSh 3.5 billion. The projects benefited 1,104 market centres, 1,206 public schools, 329 health centres, 186 government/administrative centres, 35 coffee factories, 155 tea buying centres and 149 water projects.

10.21. The cumulative capital expenditure since inception of the Rural Electrification Programme (REP) in 1973 rose to KSh 25 billion during the financial year 2008/2009, up from KSh 20 billion the previous financial year. Total collections from the Rural Electrification Levy increased from KSh 1,555 million to KSh 1619 million over the same period.

10.22. The number of customers connected under the REP rose by 27.2 per cent to stand at 205,287 as at June 2009 from 161,354 customers as at June 2008. Units of electricity sold increased by 4.2 per cent from 240 million units in 2007/2008 to 250 million units in 2008/2009, while revenue realised more than doubled from KSh 2,064 million in 2007/2008 to KSh 4,337 million in 2008/2009.

10.23. In 2009, the Government incorporated the Kenya Electricity Transmission Company (KETRACO) to be responsible for setting up new transmission lines while KPLC retained ownership and operation of the existing transmission systems. The creation of the company was intended to ease the financial burden of funding transmission projects capital investment costs from electricity consumers. During the year under review, the Government also established the Geothermal Development Company Ltd (GDC) to speed up geothermal power production in the country. The company is expected to facilitate development of at least 700 MW geothermal capacity in the next 10 years.

10.24. A total of seven projects with a combined installation capacity of 369.5 MW are currently under implementation. Geothermal projects under construction awaiting commissioning are Olkaria IV with a capacity of 140 MW, Eburru with a capacity of 2.5 MW and Olkaria II 3rd Unit with installation capacity of 35 MW. Hydroelectric power generation projects under implementation are Sang'oro and Tana power station redevelopment with installation capacity of 20 MW each and Kindaruma 3rd Unit and upgrading units 1 and 2 with installation capacity of 32 MW. Kipevu III Thermal Plant is the only thermal power generation currently under implementation.

Chapter 11

Manufacturing

Overview Despite being identified as one of the key drivers of the economy, the manufacturing sector faced various challenges in the year under review. These include high cost of production, competition from cheap imports, high taxes, low credits from financial institutions, and drought in the first part of the year. These factors hampered the sector from realizing its full potential. Production environment was also very challenging over the period as characterized by the prevailing slowdown in the regional economies following the global economic downturn. In the year under review, the sector recorded a decelerated growth of 2.0 per cent in 2009 after registering a revised growth of 3.6 per cent in 2008. The sub-sectors that registered growth include leather and footwear, rubber products, plastic products, non-metallic minerals and miscellaneous manufacture and those in food manufacturing. On the other hand production of beverages, tobacco, textiles, paper and paper products declined significantly.

Employment 11.2. Direct formal employment in the manufacturing sector registered a growth of 0.5 per cent from 264.1 thousand persons in 2008 to 265.3 thousand persons in 2009. Direct formal employment to Kenyans in the EPZ however contracted marginally from 30.2 thousand persons in 2008 to 30.1 thousand persons in 2009.

Manufacturing Output 11.3. The output, compensation of employees and value added at current prices for manufacturing sector in 2005 to 2009 are presented in Table 11.1. Value of manufacturing output rose by 5.1 per cent to KSh 738,829 million in 2009, a slower growth compared to the 12.2 per cent in 2008. Value added increased by 6.3 per cent to stand at KSh 216,009 million in 2009 while compensation of employees went up by KSh 12,626 million to reach KSh 74,767 million in the same period.

Table 11.1: Manufacturing Sector – Output, Compensation of employees and Value Added, 2005 – 2009

Current Prices - KSh Million				
YEAR	Value of Output	Intermediate Consumption	Value Added	Compensation of Employees
2005	500,215	351,053	149,162	50,734
2006	560,089	393,312	166,777	57,827
2007 ⁺	626,652	436,155	190,497	59,789
2008	703,073	499,075	203,998	62,141
2009*	738,829	521,996	216,833	74,767

* Provisional.

⁺ Revised

Quantum Indices 11.4. Table 11.2 shows the quantum index of production in the manufacturing sector for the period 2005 to 2009. As indicated, overall production declined by 0.5 per cent in 2009, similar to the decline registered in 2008. Details of the performance of the various sub-sectors are discussed in the subsequent paragraphs.

Table 11.2: Quantum Index of Manufacturing Production, 2005 - 2009

Industry	2005	2006	2007	2008	2009*	Percentage Change 2009/2008
Meat & Dairy Products	118.7	125.3	153.4	142.9	155.3	8.7
Canned Veg Fruits, Fish, Oils & Fats	469.2	556.0	680.5	649.7	679.5	4.6
Grain Mill Products	231.2	253.6	246.9	244.9	255.7	4.4
Bakery Products	202.6	212.8	204.6	194.6	207.0	6.4
Sugar & Confectionery	237.7	232.4	251.3	248.6	264.0	6.2
Miscellaneous Foods	271.1	257.6	295.4	277.2	255.3	-7.9

Rubber Products	760.3	682.3	895.3	558.3	640.5	14.7
Plastic Products	1,270.5	1,656.3	1,674.8	1,513.9	1,681.2	11.1
Clay and Glass Products	1,472.8	1,836.1	1,791.9	1,751.6	1,747.7	-0.2
Non Metallic Minerals	187.5	222.2	237.0	347.6	467.1	34.4
Metals Products	257.9	282.1	314.5	320.6	364.4	13.7
Non Electrical Machinery	87.9	90.0	83.0	74.1	77.3	4.3
Electrical Machinery	268.8	245.5	180.2	140.5	134.9	-4.0
Transport Equipments	975.7	1,281.7	1,309.9	1,106.7	1,047.4	-5.4
Miscellaneous Manufactures	1,058.6	1,442.6	1,412.7	1,811.1	2,676.7	47.8
Total Manufacturing	334.1	353.5	381.5	376.5	374.5	-0.5

* Provisional

11.5. Food manufacturing sub-sector registered a growth of 2.1 per cent in 2009 after recording a decline of 3.9 per cent in 2008. The meat and dairy products sub-sector grew by 8.7 per cent in 2009 after recording a decline of 7.7 per cent in 2008. Production of beef and, sheep, lamb and goat products registered growths of 13.7 and 14.7 per cent, respectively during the review period. This could be attributed to the drought experienced in 2009 which forced farmers to dispose off their livestock. Processed chicken also recorded a marginal growth of 0.1 per cent. Production of sausages and pork declined by 14.9 and 0.6 per cent, respectively. Production of ice cream, cheese and liquid milk recorded growths of 44.4, 21.4 and 9.4 per cent respectively. Production of liquid milk rose from 260.7 million litres in 2008 to 285.2 million litres in 2009. Production of butter declined further by 28.6 per cent in 2009, as compared to a decline of 29.9 per cent registered in 2008. Milk-based baby food production also dropped by 31.9 per cent in 2009 after registering a significant growth of 45.9 per cent in 2008.

11.6. Production of canned vegetables, fruits, fish, oil and fats recorded a growth of 4.6 per cent in 2009. Edible fats and margarine and edible oils recorded growths of 1.4 and 18.8 per cent, respectively. Production of fruit and vegetable juices, canned fruits and canned vegetables went down by 6.8, 10.4 and 34.2 per cent, respectively during the period under review. Production of canned vegetables decreased from 924.2 tonnes in 2008 to 608.2 tonnes. Processed fish dropped by 27.8 per cent from 12,560.4 tonnes to 9,193 tonnes in 2009.

11.7. The grain and grain mill products sub-sector grew by 4.4 per cent in 2009. Wheat flour production registered an impressive growth of 15.6 per cent from 310.7 thousand metric tonnes in 2008 to 359.3 metric tonnes in 2009 while production of maize meal dropped by 5.4 per cent from 351.2 thousand metric tonnes to 332.4 thousand metric tonnes in 2009. During the review period, maize shortages were experienced resulting into a decline in maize meal production. However, towards the end of the year, there was a Government decision to waive duty on maize grains imports leading to an increase in imports. Milling of rice on the other hand recorded a decline of 12.7 per cent during the period under review.

Table 11.3: Production of Grain Milling Products, 2005 – 2009

YEAR	COMMODITY,		
	Sifted Maize meal	Wheat Flour	Rice
2005	283.1	363.3	39.5
2006	322.8	392.8	39.7
2007	287.5	374.5	33.5
2008	351.2	310.7	26.8
2009*	332.4	359.3	23.4

* Provisional

11.8. Production of bakery products rose by 6.4 per cent during the period under review compared to a decline of 4.9 per cent in 2008. The growth was driven by production of biscuits, scones and cakes which grew by 43.3, 20.3 and 2.6 per cent, respectively. Production of bread on the other hand declined by 1.0 per cent in 2009.

11.9. The sugar and confectionery sub-sector grew by 6.2 per cent driven by sugar production which increased by 5.9 per cent from 517.7 thousand metric tonnes in 2008 to 548.2 thousand metric tonnes in 2009. This was the highest production of sugar ever recorded in the industry. In spite of this increase, the industry is still faced with a deficit.

11.10. Production in the miscellaneous food industry declined for the second year in a row registering a 7.9 per cent drop in 2009. Production of milled coffee increased by 35.7 per cent from 42 thousand metric tonnes in 2007/08 to 57 thousand metric tonnes in 2008/09. Manufacture of instant coffee decreased by 15.4 per cent in 2009. Tea production dropped by 12.0 per cent from 345.8 thousand metric tonnes in 2008 to 304.2 thousand metric tonnes in 2009. This could be attributed to low rainfall experienced during the period. The manufacture of animal feeds rose by 55.3 per cent from 242.4 thousand metric tonnes in 2008 to 376.5 thousand metric tonnes in 2009.

11.11. Production in the beverages and tobacco sub-sector reduced by 4.5 per cent in 2009 compared to a positive growth of 5.6 per cent recorded in 2008. Output from beverages and tobacco sub-sectors declined by 3.8 per cent and 9.5 per cent, respectively. This was mainly caused by a decline in production of beer and stout, and cigarettes by 6.6 and 9.5 per cent, respectively. Production of soft drinks rose by 5.8 per cent from 340.0 million litres to 359.8 million litres during the period under review while that of spirits decreased by 30.7 per cent in 2009.

11.12. Production in the textiles sub-sector continued on a downward trend registering a decline of 17.6 per cent in 2009. Production of knitted fabrics, gunny bags, blankets and

cotton woven fabrics dropped by 58.3, 29.9, 12.3 and 10.7 per cent, respectively. However, production of cardigans and toweling material rose by 7.4 and 7.0 per cent, respectively during the same period.

11.13. The clothing industry recorded a decline of 15.7 per cent during the period under review. This was caused by the decline in production of; vests, singlets and underwear; trousers and; shirts and t-shirts by 39.3, 26.7 and 22.9 per cent, respectively. However, production of uniforms and overalls and suits for men and boys went up by various margins during the period under review.

11.14. Production of leather and footwear registered a significant growth of 36.5 per cent. This was mainly driven by the production of leather shoes which shot up by 46.5 per cent in 2009. In addition, production of finished leather grew by 20.9 per cent.

11.15. Production of wood and cork products declined by 14.4 per cent, resulting from a 28.6 per cent decline in the production of sawn timber. However, production of furniture and fixtures recorded a modest growth of 3.5 per cent.

11.16. Manufacture of paper and paper products recorded a notable decline of 37.3 per cent. Production of paper and paper products has generally been on a downward trend owing to shortages of raw materials locally and high costs of production. Production of exercise books and duplicating paper dropped by 21.7 and 5.8 per cent respectively. Conversely, production of paper bags and sacks, corrugated paper containers and toilet paper rolls went up by 39.6, 6.7 and 3.3 per cent in that order during the period under review.

11.17. Output from printing and publishing sub-sector recorded a huge decline of 48.6 per cent due to low production of news print after the Pan Paper Mills Company became insolvent during the review period. However, the copies of newspaper produced rose by 6.5 per cent during the same period.

11.18. Production of basic industrial chemicals registered a 2.5 per cent growth during the review period. Production of paints rose by 20.2 per cent to 23.8 million litres from 19.8 million litres produced in 2008, while varnishes and lacquers rose by 15.1 per cent. Tablets and liquid drugs rose by 43.4 and 14.4 per cent, respectively over the same period. At the same time, laundry soaps and detergents rose by 3.2 and 0.1 per cent, respectively. Production of electrodes, fertilizer and insecticides in liquid form increased during the period under review. Production of pyrethrum extract however dropped to 9.2 metric tonnes in 2009 compared to the 17.3 metric tonnes recorded in 2008. Production of oxygen, nitrogen and hydrogen reduced by 7.3 per cent while that of acetylene dropped by 10.7 per cent.

11.19. Production of petroleum and other chemicals registered a growth of 9.0 per cent in 2009. This was partly driven by the production of primers and undercoat which went up by 55.9 per cent in 2009. However, production of washing soap and shoe polish dropped by 10.6 and 1.7 per cent, respectively during the same year. On the other hand, petroleum products from the refinery recorded mixed performance in 2009. Over the same period, production of diesel and bitumen dropped drastically by 59.5 and 28.6 per cent, respectively. Other products which registered a negative growth were motor spirits, LPG and fuel oil which declined by 13.4, 6.6 and 3.9 per cent, respectively. However, production of kerosene and gas oil went up by 19.5 and 16.2 per cent, respectively.

11.20. Rubber products sub-sector recorded a growth of 14.7 per cent in 2009. This was mainly driven by the increase in production of motor vehicle tubes, motor vehicle tyres, and rubber shoes which increased by 61.2, 18.0 and 14.1 per cent, respectively. Production of motor vehicle tyres increased from 283 thousand in 2008 to 334 thousand in 2009 while that of motor vehicle tubes rose from 102.9 thousand in 2008 to 165.9 thousand in 2009.

11.21. Production of plastic products registered a growth of 11.1 per cent in 2009. This was attributed to the increase in the production of PVC pipes, plastic shoes, plastic bottles and polythene bags of 36.3, 16.8, 7.2 and 3.5 per cent, respectively. The non-metallic industry registered a significant growth of 34.4 per cent in 2009. This was mainly driven by the production of clinker, cement and roofing tiles which went up by 79.8, 17.3 and 10.3 per cent, respectively.

11.22. Table 11.4 presents information on the quantity of cement produced, consumed, exported and imported between 2005 and 2009. Local production of cement rose by 15.5 per cent from 2,829.6 thousand metric tonnes in 2008 to 3,267.8 thousand metric tonnes in 2009. Importation of cement also rose tremendously by 88.2 per cent from 18.7 thousand metric tonnes in 2008 to 35.2 thousand metric tonnes in 2009. At the same time, consumption and stocks of cement rose by 21.5 per cent to reach 2,618.8 thousand metric tonnes. Exports of cement to Uganda and Tanzania declined by 2.9 per cent in 2009 whereas those to other countries increased by 15.2 per cent during the period under review. Local producers of cement expanded their production capacity, and two producers also entered the market. The demand for cement remained high as indicated by improved consumption in the review period.

Table 11.4: Cement Production and Utilisation, 2005 - 2009

YEAR	PRODUCTION	IMPORTS	CONSUMPTION AND STOCKS	EXPORTS TO	
				Uganda and Tanzania	All Other Countries
2005	2,123.30	9.8	1,675.90	337.4	119.8
2006	2,405.90	3.8	1,765.80	406.1	237.8
2007	2,615.10	42.5	2,059.50	514	84.1
2008	2,829.60	18.7	2,155.80	626.5	66
2009*	3,267.80	35.2	2,618.80	608.2	76

* Provisional.

11.23. The metal products sub-sector registered a growth of 13.7 per cent in 2009. This was attributed to the production of water tanks and, iron rods and bars by 89.3 and 84.1 per cent, respectively. Production of steel wool and barbed wire, and cork also increased by 30.3 and 23.2 per cent, respectively during the review period. However, gas cylinders production declined significantly by 73.3 per cent from 5,795 in 2008 to 1,547 in 2009. Other products which recorded declines in production were metal cans and tins, razor blades and exhaust pipes. Production of iron sheets declined by 2.7 per cent from 189.3 thousand tonnes in 2008 to 184.1 thousand tonnes in 2009. In the non-electrical machinery sub-sector, production of wheel barrows increased by 4.3 per cent.

11.24. Production of electrical machinery dropped further for the fourth consecutive year. This may be partially explained by the 16.7 per cent decline in production of dry cells. However, production of motor vehicle batteries rose by 11.4 per cent from 431.1 thousand in 2008 to 480.2 thousand in 2009.

11.25. Manufacturing in the transport equipment sub-sector registered a drop in production for the second consecutive year. Production of assembled vehicles declined by 12.0 per cent from 5,747 in 2008 to 5,060 in 2009. Motor vehicle assemblers continued to face intense competition from importers of second-hand vehicles. Further, production of lorry and trailer bodies dropped by 37.7 per cent, whereas those of coaches and buses went up by 19.2 per cent during the period under review.

11.26. Production of miscellaneous manufactures recorded a notable growth of 47.8 per cent in 2009. Ball points, household brushes and illuminated signs production went up by 33.3, 27.3 and 25.2 per cent respectively. However, production of mattresses dropped by 21.0 per cent in the same year.

Investment 11.27. In 2009, Kenya Investment Authority (KenInvest) processed 22 projects cutting across the manufacturing sector. The total capital cost of approved projects dropped drastically from KSh 23.6 billion in 2008 to KSh 2.5 billion in 2009. The approved projects were expected to create employment for 1,136 persons.

Credit to the Manufacturing Sector 11.28. Table 11.5 shows the number and cost of projects approved by the Government to be undertaken within the manufacturing industry in the last five years. In 2009, Industrial Development Bank (IDB) continued to use internally generated resources for short and medium term lending mainly for machinery finance and working capital. The Bank approved one project worth KSh 55 million.

Table 11.5: Industrial Projects Approved By Selected Government or Quasi-Government, 2005-2009

INSTITUTION	Number of Projects					Approved Expenditure (KSh Million)				
	2005	2006	2007	2008	2009*	2005	2006	2007	2008	2009*

¹Expenditure includes ICT, real estate, cut flowers, health services and manufacturing up to 2008

11.29. During the year under review, Development Bank of Kenya (DBK) witnessed increased demand for loans and advances compared to 2008. The bank approved loans and advances amounting to KSh 2.2 billion. Out of this, KSh 29 million was used to finance two projects in the manufacturing sector. The loan for the two projects was used for expansion purposes.

11.30. Project funding by Industrial and Commercial Development Corporation (ICDC) declined from KSh 221 million in 2008 to KSh 21.2 million in 2009. The Corporation financed three small and medium sized enterprises.

11.31. The Kenya Industrial Estates (KIE) disbursed loans worth KSh 6.6 million to 43 projects related to manufacturing activities in 2009. Most of the disbursed loans were for expansion purposes. Out of the 43, six were start up projects, mainly in the area of food processing. Other

sub-sectors that benefited from the loans were textiles, wood and metal fabrication works among others.

Export Processing Zones (EPZ) 11.32. The Export Processing Zones (EPZ) programme recorded a downward trend in the performance of key indicators in 2009, as a result of adverse effects of global economic recession, especially in the United States (US) market which is a prime destination of EPZ exports. The situation was further aggravated by unfavorable business environment characterized by high costs of production and stiff competition from Asian countries. The EPZ programme is undergoing transformation to Special Economic Zones (SEZ) with a wider scope of activities envisaged to meet the objectives of the Vision 2030.

11.33. The number of enterprises operating under the EPZ rose to 83 in 2009 from 74 in 2008. Local ownership of investment within the EPZ rose from 14.3 per cent in 2008 to 19.3 per cent in 2009. Joint ventures were 24.1 per cent compared to 24.7 per cent in 2008, while foreign investment constituted 56.6 per cent, a decline compared to 60.0 per cent reported in 2008. The Authority has started implementing an Incubator project in order to attract and nurture local business. Domestic sales declined by 12.7 per cent to KSh 2,215 million in 2009 from KSh 2,536 million in the previous, as presented in Table 11.6.

11.34. The number of gazetted Export Processing Zones as at end of December 2009 stood at 41, out of which 39 were private while two were public. Three new zones were gazetted one each in Ruiru, Malindi and Eldoret in 2009. However, some zones have been approved for de-gazettement due to requests by the investors as a result of excess capacity among other reasons.

¹ Domestic sales includes sales to duty free shops and agencies

11.35. Total sales from the EPZ enterprises declined by 16.3 per cent in 2009 to stand at KSh 26,159 million. Exports accounted for KSh 23,351 million, a decrease of 16.8 per cent. Domestic sales also declined by 10.9 per cent to stand at KSh 2,808 million in 2009 from KSh 3,150 million in 2008.

11.36. Imports declined by 24.3 per cent to stand at KSh 12,372 million in the year under

review. A similar trend was observed in the expenditure on local purchases which declined by 11.9 per cent.

11.37. The cumulative capital investment in form of equipment, machinery and other funds invested by the 83 operational enterprises in 2009 rose by 6.2 per cent to stand at KSh 21,366 million.

11.38. The number of Kenyans directly employed in the EPZ contracted marginally to stand at 30,115 in 2009. The bulk of employment was generated by the garment/ apparel enterprises with a total of 24,359 representing 79.5 per cent of the total employment.

11.39. During the year 2009, local expenditure stood at KSh 11,014 million which was a decrease of 3.1 per cent from the previous year. This constitutes the amount of resources spent by EPZ enterprises in purchase of local goods and services, purchase of capital goods, salaries for local employees, electricity, telephone, water, rent, transport and other local costs.

Africa Growth and Opportunity Act (AGOA) 11.40. Africa Growth Opportunity Act (AGOA) initiative aims at increasing exports especially apparels from accredited Sub-Saharan African (SSA) countries to the US market, duty and quota free. Table 11.7 provides a breakdown of the garment/apparel under AGOA.

Table 11.7: Selected EPZ Garment / Apparel Performance Indicators under AGOA, 2005-2009

	2005	2006	2007	2008	2009*	% Growth
Number of Enterprises	25	25	22	18	19	5.6
Employment	34,234	31,813	28,006	25,766	24,359	-5.5
Capital Investment (KSh Million)	9,983	10,317	8,314	7,578	5,490	-27.6
Exports (KSh Million)	14,688	14,774	13,768	15,811	12,480	-21.1

Source: EPZA

*Provisional

11.41. Exports to the US decreased by 21.1 per cent, from KSh 15,811 million in 2008 to KSh 12,480 million in 2009. During the year under review, direct employment in the garment/apparel sector dropped by 5.5 per cent from 25,766 in 2008 to 24,359 recorded in 2009. This is attributed to scaling down of operations and closure of some firms due to unfavourable business environment characterized by high costs of production and stiff competition from Asian countries. In addition, investment registered a decline of 27.6 per cent in 2009.

Chapter 12

Building and Construction

Overview The development of physical infrastructure is a critical foundation for the realization of the Kenya Vision 2030. The first Medium Term Plan (2008 – 2012) for the implementation of the Vision targets is to have 64,500 Km of well maintained and motorable roads at a cost of KSh 186.0 billion. Over the Plan period, the Government will concession many toll roads to be built by the private sector.

12.2. In 2009, cement consumption grew by 21.1 per cent to 2,671.2 thousand tonnes. The increase was mainly due to several on-going roads and Constituency Development Fund (CDF) construction projects, among others. Loans and advances from commercial banks to the building and construction sector expanded by 4.0 per cent to KSh 30,414.0 million in 2009. The index of Government expenditure on roads increased from 223.8 in 2008 to 279.3 in 2009. The total value of reported private building works completed in selected main towns rose by 19.5 per cent to KSh 14,725.8 million in 2009 from KSh 12,323.2 million in 2008. The total estimated cost of reported new private buildings completed increased by 43.5 per cent to KSh 9,038.3 million in 2009. The total value of building plans approved rose by 11.7 per cent from KSh 69,321.7 million in 2008 to KSh 77,443.8 million in 2009.

12.3. The overall expenditure by the Ministry of Roads is expected to rise by 43.5 per cent to KSh 60,840.6 million in 2009/10 financial year. Disbursement of funds by the Kenya Roads Board (KRB) for road construction, rehabilitation and maintenance activities is expected to increase by 5.3 per cent from KSh 19.0 billion in 2008/09 to KSh 20.0 billion in 2009/10 financial year. The sector's total wage employment increased by 10.1 per cent to stand at 93.4 thousand persons in 2009.

Key 12.4. Selected key economic indicators in building and construction are presented in Table
Economic 12.1. Cement consumption, which remains a key indicator of the sector increased by 21.1
Indicators per cent to 2,671.2 thousand tonnes in 2009. This was as a result of road projects being undertaken across the country and increased activities by private home builders. The index of reported private building works completed in main towns increased from 108.2 in 2007 to 137.4 in 2008 largely on account of houses constructed and completed by the private sector. The index of reported public building works completed in main towns increased from 4.5 in 2007 to 5.1 in 2008, mainly attributed to housing projects completed by National Housing Corporation (NHC). The index of Government expenditure on roads increased from 223.8 in 2008 to 279.3 in 2009.

Table 12.1: Selected Key Economic Indicators in Building and Construction¹, 2005 - 2009

* Provisional.

¹ Actual deflated by various building or construction cost indices.

² The average of the actual of two consecutive years is taken in each case for reported completion of buildings

12.5. Total wage employment in building and construction sector went up by 10.1 per cent to stand at 93.4 thousand persons in 2009 from 84.8 thousand persons registered the previous year. Private sector employment rose by 13.2 per cent to 73,545 persons in 2009. Public sector employment went up marginally from 19,852 to 19,902 persons in 2008 and 2009, respectively.

12.6. Data on the annual percentage change in building and construction cost indices for the period 2007 to 2009 is presented in Table 12.2. The overall cost index slowed down to a growth of 4.9 per cent in 2009 from 7.1 per cent growth registered in 2008. This was mainly caused by reductions in the rate of growth of the cost index of building materials from 7.6 per cent in 2008 to 3.1 per cent during the review period. On the other hand, the labour cost index for the sector accelerated, albeit at a lower rate, from 6.1 to 8.8 over the same period. The net effect was a slowdown in the overall cost index from a growth of 7.1 per cent in 2008 to 4.9 per cent in 2009.

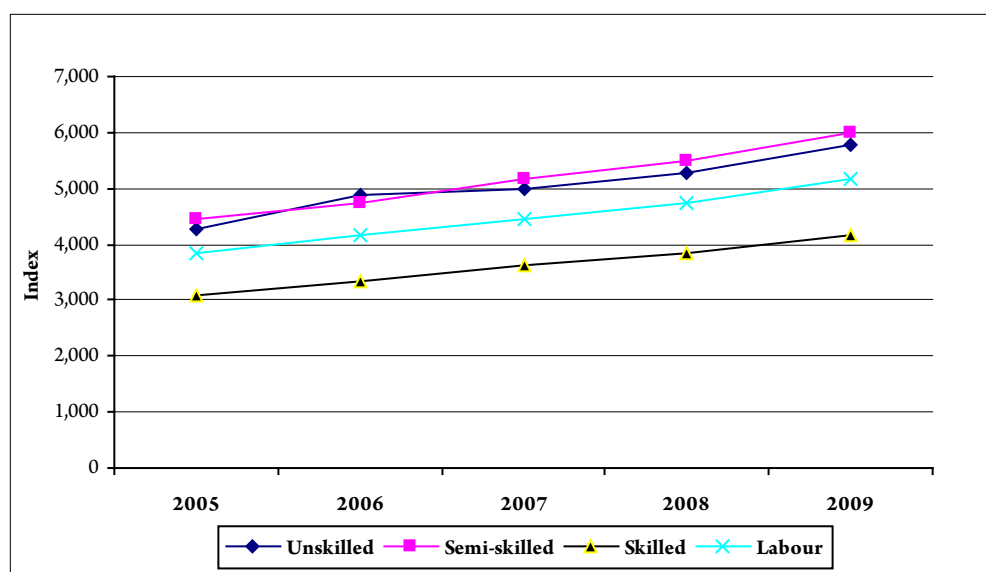

Table 12.2: Annual Percentage change in Building and Construction Cost Indices¹, 2007 - 2009

	Materials			Labour			Total Cost		
	2007	2008	2009*	2007	2008	2009*	2007	2008	2009*

¹ From December to December.

12.7. Figure 12.1 presents the trend in overall labour construction cost indices for the years 2005 to 2009. Overall labour construction cost indices for all cadres of workers increased by bigger percentages in 2009 relative to the growths registered in the previous period. Wages for unskilled labour rose by 9.1 per cent while those for skilled labour registered a growth of 8.6 per cent in 2009.

Figure 12.1: Trend in overall labour construction cost indices, 2005 - 2009 (Base 1982 = 100)

12.8. The value of building plans approved by Nairobi City Council (NCC) and other towns are presented in Table 12.3. The total value of building plans approved registered an increase of 11.7 to stand at KSh 77,443.8 million in 2009. The value of building plans approved by NCC increased by 18.2 per cent from KSh 52,073.0 million recorded in 2008 to KSh 61,555.4 million in 2009. This is attributed to demand for residential, commercial and industrial buildings arising from increase in population. Enforcement of by-laws on building plans by NCC also contributed to the above increase. The value of building plans approved by other towns reduced from KSh 17,248.7 million in 2008 to KSh 15,888.4 million in 2009. The decrease was mainly attributed to non compliance with approval by-laws and non reporting to local authorities.

Table 12.3: Value of Building Plans Approved By Nairobi and Other Towns, 2005 - 2009

Year	KSh Million		
	Nairobi	Other Towns	Total
2005	23,842.19	13,804.88	37,647.07

12.9. The value of reported private building works completed in selected main towns are shown in Table 12.4. The total value of reported private building works completed in the selected main towns expanded by 19.5 per cent to stand at KSh 14,725.8 million in 2009 from KSh 12,323.2 million in 2008. The NCC registered a 23.2 per cent increase in the value of reported private building works completed to stand at KSh 13,574.2 million in 2009. Malindi town recorded a value of KSh 206.7 million in 2009 from KSh 143.8 million in 2008, an increase of 43.7 per cent. Kisumu town recorded a significant increase from KSh 42.1 million in 2008 to KSh 124.5 million in 2009. In contrast Mombasa and Nakuru recorded declines.

Table 12.4: Value of Reported Private Building¹ Works Completed in Selected Main Towns, 2005 - 2009

¹ Including the value of extension.

12.10. Reported completions of new private buildings in selected main towns are presented in Table 12.5. The total estimated cost of new completed private buildings increased to KSh 9,038.3 million in 2009, an increase of 43.5 per cent. The estimated cost of non-residential units increased by 40.9 per cent to KSh 1,936.7 million in 2009, while that of residential units rose by 44.2 per cent. New residential units increased to 2,851 in 2009 from 2,401 in 2008.

Table 12.5: Reported Completions of New Private Buildings¹ in Selected Main Towns², 2005 - 2009

Year	Number		Estimated Cost (KSh Million)		
	Residential	Non-Residential	Residential	Non-Residential	Total
2005	1,815	29	2,145.5	426.9	2,572.4

12.11. Figure 12.2 compares the value of private plans approved and estimated cost of reported new private building works completed in main urban areas. The ratio of reported new private buildings completed to approved plans remains very low. This could be attributed to increased approvals as a result of enforcement of by-laws and non-reporting of completions. In 2009, the ratio stood at 12 completions reported for every 100 private plans approved, a slight improvement from nine for every 100 in 2008.

Figure 12.2: Comparison of Value of Private Plans Approved and Reported New Private Building Works Completed in Main Urban Areas, 2005 - 2009

12.12. The number of reported completions of new public buildings in selected main towns is detailed in Table 12.6. The total estimated cost of reported completions of new public buildings more than doubled to stand at KSh 1,047.0 million in 2009 from KSh 443.0 million recorded in 2008. The estimated cost of residential buildings completed increased significantly from KSh 210.2 million in 2008 to KSh 938.5 million in 2009. On the other hand, estimated cost of non-residential buildings completed decreased significantly from KSh 232.8 million in 2008 to KSh 108.5 million in 2009. Over 80 per cent of reported newly completed public buildings were residential compared to 54.7 per cent in 2008.

Table 12.6: Reported Completions of New Public Buildings¹ in Selected Main Towns², 2005 – 2009

Year	Number		Estimated Cost (KSh Million)

Housing 12.13. The Government has been increasing its budgetary allocation for housing programmes and projects since 2003. The housing sector has been characterised by inadequacy of affordable and decent housing, low level of urban home-ownership, extensive and inappropriate dwelling units, including slums and squatter settlements. To improve this situation, a total of KSh 1.1 billion was allocated for the Kenya Slum Upgrading Programme and the Civil Servants Housing Scheme under the Ministry of Housing in the financial year 2009/10. The following housing projects were ongoing in 2009: Ngara Phase 1 (130 units), Kileleshwa (62 units), Ngara Phase II (526 units) and Kilimani Phase II (20 four-bedroom houses).

12.14 The National Housing Corporation (NHC) continues to play a crucial role in the implementation of the Government's housing policies and programmes. In 2009, two housing projects were completed at a total cost of KSh 938.5 million. These included 110 rental flats in Langata Phase III (Nairobi), and 6 mortgage maisonettes in Nairobi. Other works completed were re-roofing and perimeter wall in Karanja road (Nairobi) at a cost of KSh 4.1 million, 1.7 Km access road in Langata (Nairobi) at a cost of KSh 58.8 million, perimeter wall and shop in Mamboleo (Kisumu) at a cost of KSh 18.3 million and 225 repairs in Changamwe (Mombasa) at a cost of KSh 29.6 million. The five housing projects which were under construction as at 31st December 2009 will cost a total of KSh 2,323.9 million upon completion. These consist of 310 flats (Langata Phase II) in Nairobi, 40 flats in Kisii, 80 flats in Kakamega, 105 apartments in Kileleshwa and 110 flats (Madaraka Sector A) in Nairobi. There were also housing schemes at advanced planning stage as at 31st December 2009, which are to be constructed in Nairobi and Nyeri consisting of 953 units at an estimated cost of KSh 3.40 billion. The Corporation advanced rural housing loans amounting to KSh 181.8 million to 165 loanees in 2009.

12.15. The analysis of approved and actual Central Government expenditure for the financial years 2005/06 to 2009/10 is shown in Table 12.7. Actual expenditure on housing increased from KSh 2,853.5 million registered in 2007/08 to KSh 3,333.8 million in 2008/09. Actual expenditure as a percentage of approved expenditure decreased to 88.2 per cent in 2008/09 from 91.2 per cent in 2007/08. Approved expenditure on housing is expected to increase by 8.7 per cent to KSh 4,111.8 million in 2009/10 from KSh 3,781.6 million in 2008/09.

Table 12.7: Approved and Actual¹ Central Government Expenditure on Housing, 2005/06 – 2009/10

Year	Expenditure in KSh Million		Actual Expenditure as Percentage of Approved Expenditure
	Approved	Actual

Roads 12.16. Total expenditure on roads for the financial years 2005/06 to 2009/10 is shown in Table 12.8. Overall expenditure for Ministry of Roads rose by 31.0 per cent to KSh 60,840.6 million in 2009/10, with trunk roads taking the highest proportion of the total expenditure (46.9 per cent). Development expenditure on secondary roads decreased from KSh 7,770.7 million in 2008/09 to KSh 6,275.7 million in 2009/10. Expenditure on trunk roads increased by 41.7 per cent to stand at KSh 28,514.6 million in 2009/10 as a result of the on-going rehabilitation of the major highways. Recurrent expenditure (maintenance and repair) on roads increased marginally by 1.7 per cent to KSh 10,344.0 million in 2009/10.

+ Estimates

12.17. The Ministry of Roads continued to provide the regulatory framework, coordination, oversight, supervision and liaison with other ministries for smooth functioning of the road sub-sector. Under the ministry, the Kenya Roads Board (KRB) coordinates and provides funds for road maintenance in the country. Three other autonomous statutory road authorities are Kenya National Highways Authority (KeNHA), Kenya Rural Road Authority (KeRRA) and Kenya Urban Roads Authority (KURA). KeNHA deals with development and management of major roads (Class A, B, C). KeRRA is responsible for development of rural and small town roads (Class D, E and Others). KURA is charged with the development and management of roads in the cities and municipalities. In the 2009/10, the KRB disbursed a total of KSh 20.0 billion from the Roads Maintenance Levy Fund (RMLF) to various roads agencies. KeNHA received KSh 8,150.0 million, KeRRA received KSh 6,930.0 millions, KURA received KSh 2,443.75 million, Kenya Wildlife Services (KWS) received KSh 196.25 million while KRB retained KSh 2,355.0 million for its operations.

12.18. Under the Roads 2000 Programme, the Government with the assistance of development partners rehabilitated and maintained rural roads at a total of KSh 3.5 billion during the 2008/09 financial year. The districts that benefitted were: Kericho, Nakuru, North Nandi, South Nandi, Bomet, Buret, Nyamira, Gucha Kuria, Migori, Suba, Homa Bay, Rachuonyo, Kisumu, Siaya, Bondo, Kisii, Nyando, Meru North, Meru South, Meru Central, Tharaka, Embu, Mbeere, Machakos, Makueni, Trans Nzoia, West Pokot, Uasin Gishu, Keiyo, Marakwet, Kajiado, Trans Mara, Narok, Nyandarua, Muranga, and Maragua

12.19. Table 12.9 represents road network by type and classification as at 1st July 2005 and 1st July 2009. Total kilometres of road under bitumen increased by 0.2 per cent from 8.85 thousand kilometers in 2005 to 8.87 thousand kilometres in 2009. Consequently roads under earth/gravel declined by 2.4 per cent to 53.07 thousand kilometres in 2009. After the partial completion of the Road Inventory and Condition Survey (RICS), the road network was established to be 160,866 Km long comprising of 11,189 Km of paved roads and 149,689 Km of unpaved roads

Table 12.9: Kilometres of Road as at 1st July, 2005 and 1st July, 2009 by Type and Classification

12.20. Data on road works constructed, maintained and rehabilitated in the year 2009 is presented in Table 12.10. A total of KSh 45,694.7 million was used to construct 1,202.9 kilometres, while KSh 49,200.6 million was used to rehabilitate 1,167.4 kilometres of roads. A total of KSh 1,759.3 million was used to gravel 355.1 kilometres of roads. Overall, a total of KSh 96, 654.6 million was used on the three different types of road works covering a total of 2,725.4 kilometres.

12.21. Holding maintenance which mainly involved recarpeting to improve the riding quality ahead of scheduled major reconstructions works was done on Kenol – Muranga, Mau summit – Kericho and Muranga – Kiriani roads at a total cost of KSh 439.9 million.

Chapter 13

Tourism

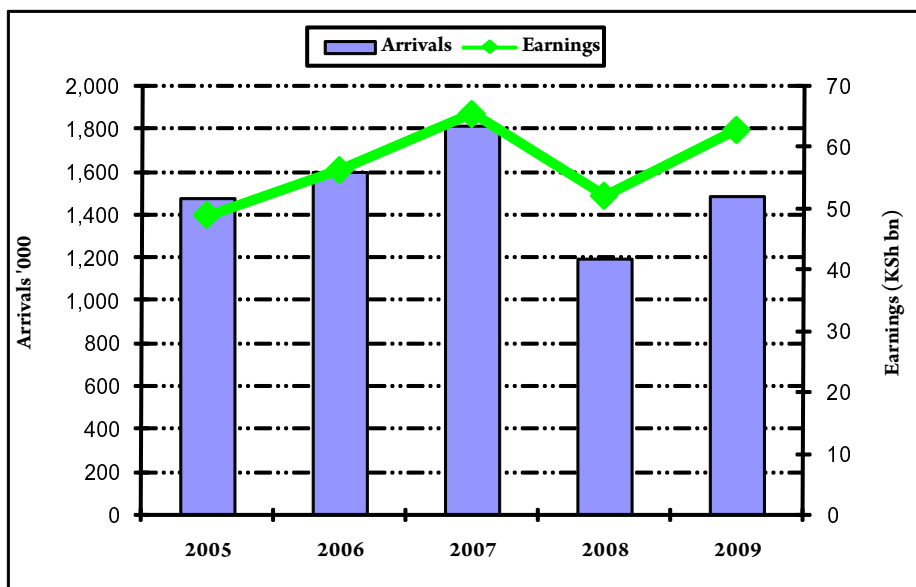

Overview Performance indicators point to a recovery in the tourism sector following massive market re-assurance missions in the key source markets in campaigns to woo tourists back to Kenya. This resulted in tourism earnings improving from KSh 52.7 billion in 2008 to KSh 62.5 billion in 2009, reflecting 18.6 per cent growth. Similarly, the volume of international arrivals expanded significantly by 23.9 per cent from 1,203.2 thousand in 2008 to 1,490.4 thousand in 2009. This positive development was achieved despite a background of the negative economic effects associated with the global economic meltdown and uncertainties brought about by the influenza A(H1N1) outbreak.

13.2. The Government's commitment to providing an enabling environment, coupled with successful tourism promotion and political stability resulted in the number of bed-nights occupied increasing significantly by 68.8 per cent from 3,699.0 thousand in 2008 to 6,242.8 thousand in 2009. Similarly, the improved volume of international arrivals coupled with aggressive domestic marketing resulted in the number of visitors to game parks and reserves expanding by 45.9 per cent from 1,633.9 thousand in 2008 to 2,383.3 thousand in 2009.

13.3. The number of visitors to museums, snake parks and other historical sites increased by 54.7 per cent from 493.2 thousand in 2008 to 763.1 thousand in 2009. Likewise, the number of local and international conferences held went up by 7.2 and 3.7 per cent respectively, in 2009.

Arrivals and Departures 13.4. The Government's strategy to market the country as a safe tourist and investment destination has been crucial in reviving the tourism sector. The recovery of the sector that started during the last quarter of 2008 continued through 2009. This outcome was reflected in the number of inbound tourists that appreciably improved by 23.9 per cent from 1,203.2 thousand in 2008 to 1,490.4 thousand in 2009 as shown in Table 13.1. This robust growth was attributed to stepped up marketing in key source markets and the expanded international route network covered by the national flag carrier, Kenya Airways. The growth reflected a re-examination of the hitherto negative travel advisories in the key source markets. As a result, the decline of both international arrivals and tourism earnings recorded during 2008 reverted to positive as reflected in Figure 13.1.

Figure 13.1: Trends in Visitor Arrivals and Tourism Earnings, 2005 - 2009

13.5. Figure 13.2 shows the monthly international visitor arrivals through the country's major international airports for the period 2008 and 2009. During 2009, more than 60.0 per cent of all inbound tourists to the country came through Jomo Kenyatta International Airport (JKIA) and Moi International Airport (MIA) in Mombasa. Over the review period, visitors' arrivals through JKIA and MIA were generally above the monthly levels achieved during 2008. A comparison of the monthly arrivals reveals notable increases for JKIA during 2009 when compared to 2008. However, the level of arrivals through MIA remained modest over the review period, an indication that charter flights have not fully resumed.

Figure. 13.2: International Arrivals through JKIA and MIA, 2008 - 2009

13.6. The number of international visitor arrivals who visited for purposes of leisure expanded by 13.4 per cent from 936.1 thousand in 2008 to 1,061.2 thousand in 2009 as shown in table 13.1. This accounted for 71.2 per cent of total inbound tourists, compared to 77.8 per cent during 2008. This explains the recovery of visits for purposes other than holiday, which registered substantial increases over the review period. During the first quarter, the number of arrivals went up significantly by 50.1 per cent from 234.7 thousand in 2008 to 352.4 thousand in 2009. This was mainly attributed to recovery by visitor arrivals in all categories during the quarter compared to a corresponding period in 2008. Similarly, the second and third quarters registered impressive performances. However, the fourth quarter reported a modest growth, mainly as a result of the strong base following a recovery achieved during a similar period in 2008.

13.7. As shown in Table 13.2, the volume of international departures went up by 28.4 per cent from 1,143.1 thousand in 2008 to 1,468.2 thousand in 2009. This was in tandem with the improved level of inbound tourists during 2009. Although holiday departures improved by 19.4 per cent, their share contracted from 78.0 per cent in 2008 to 72.5 per cent of total

departures in 2009. Consistent with the volume of arrivals, visitor departures during the first quarter improved significantly by 43.0 per cent. During the quarter, visitor departures by purposes other than holiday more than doubled. Departures during the second to fourth quarters went up by more than 20 per cent on account of significant increase in the number of departing holiday visitors during 2009.

13.8. The number of departing visitors by country and purpose of visit went up from 1,065.8 thousand in 2008 to 1,331.6 thousand in 2009, reflecting a growth of 24.9 per cent as shown in Table 13.3. This was spurred by improved departures for holiday visitors that went up by 19.4 per cent to account for 80.0 per cent of the total departures. This was supported by increased departures destined to Europe that expanded by 19.6 per cent. However, the share of departures to Europe contracted from 60.3 per cent in 2008 to 57.7 per cent in 2009 as a result of the effects of global recession. Notable increases were also reported for departures to the African continent that went up by 46.1 per cent, mainly as a result of increased frequencies by Kenya Airways. Other substantial departures were by nationals of USA and Canada. Over the review period, business and transit visitor departures went up by 55.5 and 49.4 per cent, respectively.

¹ Excludes visitor whose purpose of visit is "other"

13.9. Table 13.4 shows the trend on the number of days stayed by purpose of visit for the last five years. The total length of stay went up significantly by 41.5 per cent from 11,039.8 to 15,616.5 thousand days in 2008 and 2009, respectively. This was mainly attributed to 39.5 per cent increased days stayed by leisure visitors during 2009. Equally, the length of stay by visitors on business and transit went up significantly over the review period. The increase in length of stay was mainly due to improved confidence in the country by the visitors and the competitive offers by tourism service providers for visitors to stay longer. This resulted in the average length of stay increasing from 10.4 days in 2008 to 11.7 days in 2009.

Table 13.4: Number of Days Stayed¹ by Purpose of Visit, 2005-2009

Hotel Occupancy by Country of Residence 13.10. The hotels sub-sector bounced back with improved occupancy reported in most tourism circuits. This impressive performance was achieved as a result of extensive publicity aimed at restoring the country's image as a preferred travel destination. On the domestic front, competitive offers by the industry players paid off especially during holidays, when substantial improvements in hotel occupancy were recorded. This improvement is also associated with *Tembea Kenya Initiative* - a public/private initiative aimed at promoting domestic tourism in

an effort to cushion the industry in absence of inbound tourists.

13.11. During 2009, improved level of confidence in the country translated to increased business in the hotels sub-sector. As shown in Table 13.5, the number of bed-nights occupied in hotels, lodges and other rooming houses went up from 3,699.0 thousand in 2008 to 6,242.8 thousand in 2009, reflecting a 68.8 per cent increase. This outcome was a result of massive marketing campaigns mounted by the Government and industry stakeholders. The diversification away from traditional beaches and wildlife tourism to other circuits in the Western and Northern parts of Kenya also contributed to the improved performance. Over the review period, the overall rate of beds occupancy went up from 26.0 per cent in 2008 to 36.5 per cent in 2009. Similarly, the average occupancy rate for bed-rooms occupied expanded from 32.2 per cent in 2008 to 39.3 per cent in 2009. As shown in Figure 13.3, the occupancy levels for both beds and bedrooms has been on a gradual increase, a reflection of continued recovery in the sector.

Figure 13.3: Monthly Room and Bed Occupancy Rates, 2008 and 2009

13.12. Analysis of bed-nights occupied by country of residence reveals continued dominance by nationals from European countries. Bed-nights occupied by residents from Europe more than doubled during 2009 compared to 2008. Similarly, the share of bed-nights by residents of Europe went up from 35.8 per cent to 44.8 per cent of the total bed-nights occupied in 2008 and 2009, respectively. This was mainly supported by significant improvements in occupancy by residents of Germany, United Kingdom, Italy and France. Occupancy by residents of the African continent increased by 42.5 per cent from 1,850.1 thousand in 2008 to 2,636.5 thousand in 2009. This was attributed to improved occupancy by residents of East Africa with Kenyans being the dominant. Although bed-nights occupied by Kenyans expanded by 37.3 per cent, their share of total bed-nights contracted by 7.9 percentage points to 34.5 per cent in 2009. Bed-nights by nationals of the American continents expanded by 65.4 per cent on account of improved occupancy by residents of U.S.A. Increased occupancy by residents

of Japan, India and China resulted in a growth of 70.5 per cent in bed-nights by nationals from the Asian continent.

13.13. Kenya has a wide range of potential tourist attractions, which have not been fully exploited. The sector's activities are mainly concentrated around the coastal area and in a few National Parks and Game Reserves. However, in the recent past there have been efforts towards regional diversification of the industry.

13.14. Table 13.6 presents bed-nights occupied by zone for the last five years. In 2009, the coastal beach maintained its status as the most preferred destination of leisure by tourists. Occupancy in this zone nearly doubled, increasing from 1,643.7 thousand in 2008 to 3,011.4 thousand in 2009. This resulted in the proportion of bed-nights in the coastal beach to the total expanding by 48.2 per cent in 2009 compared to a decline of 44.4 per cent in 2008. Bed-

nights occupied in the Nairobi High Class increased from 716.2 thousand in 2008 to 1,164.1 thousand in 2009, a growth of 62.5 per cent, while occupancy in Nairobi-Other more than doubled during the same period. This was a reflection of the improved business and conference environment in the city. All other areas equally reported improved performance, which was more pronounced in the Western and Northern zones.

Table 13.6: Hotel bed-nights by Zone, 2005-2009

13.15. Figures 13.4a and 13.4b show the proportion of bed-nights occupied by area along the coastal strip in 2008 and 2009. Although the North Coast remained the most preferred area, the figures reveal that the South Coast is increasing its popularity. This is reflected in the increased share of bed-nights occupied in South Coast that expanded from 20.4 per cent in 2008 to 35.9 per cent in 2009. The proportion of bed-nights in the other coastal areas contracted in 2009 compared to 2008.

Figure 13.4a: Bed-nights Occupancy at the Coast, 2008

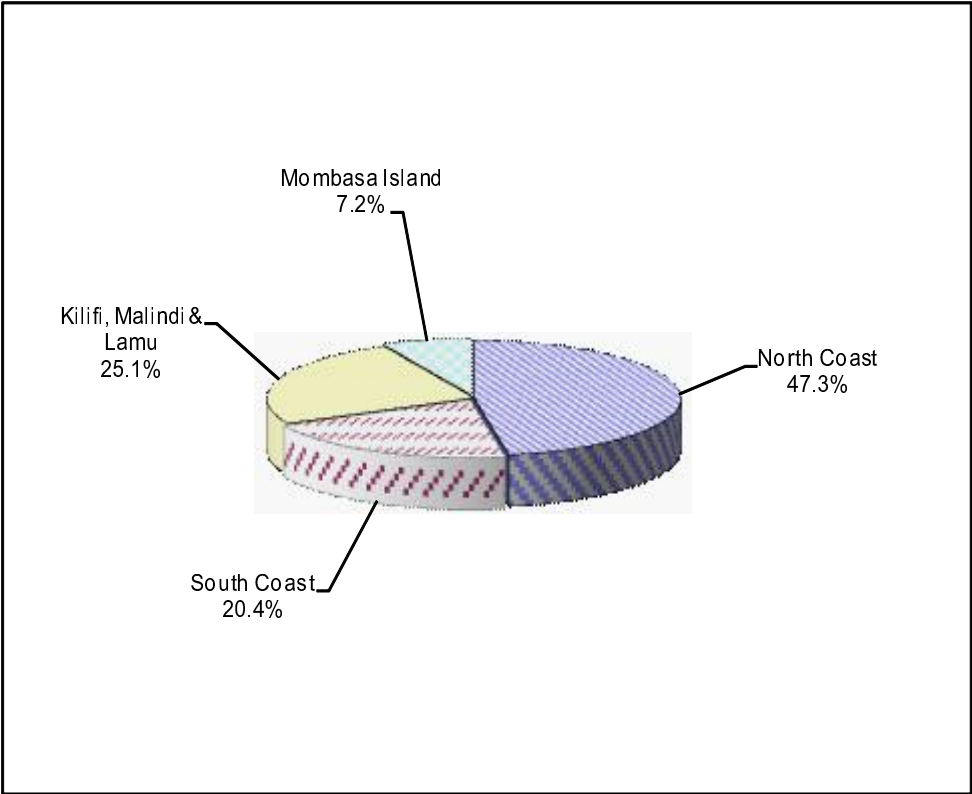

Figure 13.4b: Bed-nights Occupancy at the Coast, 2009

13.16. Details of bed-nights occupied by area and country of residence are shown in Table 13.7. Coast and Nairobi remained the most preferred areas during 2009. The share of bed-nights occupied at the coast went up from 47.6 per cent in 2008 to 50.7 per cent in 2009. Similarly, the share of bed-nights occupied in Nairobi increased marginally from 25.4 per cent in 2008 to 26.6 per cent in 2009. As a result, the share of bed-nights in lodges and "Others" contracted to 7.7 and 15.0 per cent respectively over the period under review. Occupancy along the Coast was dominated by residents of Kenya, United Kingdom, Germany, Italy and France. Similarly, occupancy in Nairobi was mainly by residents of Kenya, United States of America and United Kingdom.

13.17. Table 13.8 presents details on bed-nights occupancy in game lodges by foreign and East African residents. Occupancy in tourist resorts located within the game parks and reserves increased in tandem with the volume of visitors to game parks and reserves during 2009. Bed-nights occupied by foreign residents increased by 59.7 per cent from 248.0 thousand in 2008 to 396.0 thousand in 2009. Over the same period, the proportion of foreign residents that opted for full catering went up from 85.2 per cent in 2008 to 95.8 per cent in 2009, indicating diminishing preference for Self Service. Bed-nights occupied by East African residents went up by 5.1 per cent to stand at 86.9 thousand in 2009.

Game Parks and Reserves 13.18. Kenya's wildlife tourism is one of the niche products offered to both domestic and international tourists whose main purpose of destination is to observe local fauna. These have traditionally been concentrated in a few game parks and reserves. However, with diversification taking place, more circuits and parks/reserves are beginning to receive increased volumes of visitors.

13.19. Table 13.9 shows the number of visitors to game parks and reserves for the period 2005 to 2009. The number of visitors to these attractions expanded by 46.0 per cent from 1,633.9 thousand in 2008 to 2,385.2 thousand in 2009. All the parks/reserves except Meru and Watamu marine registered increased volume of visitors. Substantial influx of visitors was registered by Maasai Mara game reserve, Impala Sanctuary (Kisumu) and Tsavo East National park. As shown in Figure 13.5, majority of visitors to parks and reserves in 2009 continued to be adult citizens followed by adult non-residents. The increased volume to these attractions by adults is mainly associated with increased number of international arrivals and promotional campaigns within the domestic market.

Table 13.9: Number of Visitors to Parks and Game Reserves, 2005-2009

¹ Other include Arabuko Sokoke, Ol-Donyo Sabuk, Marsabit, Saiwa swamp, Sibiloi, Chyulu, Ruma National Park, Mwea National Reserve, Central Island National Park, Kiunga, Mt.Elgon, Nasolot, Ndere, and Kakamega.

Figure 13.5: Visitors to Game Parks and Reserves, 2007-2009

Museums 13.20. Table 13.10 shows the number of visitors to museums, snake parks and historical sites. Visitors to these attractions improved by 54.7 per cent, from 493.2 thousand in 2008 to 763.1 thousand in 2009. This was partly as a result of the re-opening of the snake park and increased visits to the Nairobi museum. Visitors to Gedi Ruins expanded by 43.5 per cent on account of many educational groups on learning tours to understand more about the remains of the once Swahili town. Visitors to Karen Blixen more than tripled during the year, mainly as a result of increased volume of non residents visitors from outside East Africa. The number of visitors to Fort Jesus increased from 115.5 thousand in 2008 to 167.7 thousand in 2009, representing a growth of 45.2 per cent. This is associated with the increase of tourists to the coast as evidenced by their level of bed-occupancy. As shown in Figure 13.6, the number of visitors to museums, snake parks and sites was more concentrated during the second half of the year. This could be attributed to group and school tours which mainly occur during the later half of the year.

Conference Tourism 13.21. Conference tourism is a niche market that revolves around service provision to business travelers attending seminars, workshops, conferences and conventions. This is the largest and fastest growing segment of the modern tourism. However, owing to the country's political environment in early 2008, the sub-sector has not been operating to its optimal capacity. To address this scenario marketing and re-assurance missions both within and at the international markets by the Government and other tourism players were undertaken.

13.22. The number of local and international conferences held improved by 7.2 and 3.7 per cent, respectively in 2009. Likewise, the number of delegates for local conferences went up by 68.0 per cent while those for international more than doubled. As a result, the level of occupancy for conference facilities went up by 8.7 per cent.

Table 13.11: Reported conferences, 2007-2009

Training 13.23. Since its inception, the Kenya Utalii College (KUC) has been growing both in size and scope. This is driven by the mission of enhancing professionalism and improvement of standards in the field of hospitality through training, consultancy services and innovations. This has resulted in continuous review of the programmes offered in response to market demands. During 2009, the KUC in collaboration with the University of Nairobi (UoN) introduced two degree programmes in the Hospitality, and Tour and Travel Management. A Satellite Campus was also established in the coastal town of Mombasa with first intake expected in May 2010. Progress is also being made with regard to the establishment of a KUC Kisumu Branch in line with the Medium Term Plan of the Vision 2030.

13.24. Table 13.12 shows the performance of KUC training programme for the last five years. The number of graduates increased significantly from 2,416 in 2008 to 3,228 in 2009, reflecting a 33.6 per cent improvement. This was mainly attributed to a massive increase in the number of In-Service and Management Development Programme (MDP) categories. This was also occasioned by the introduction of additional categories covering pubs, entertainment joints and restaurants that had not been covered previously. During the year, graduates for professional courses increased by 20.9 per cent as a result of diversification of the ordinary diploma courses in response to market demand.

Chapter 14

Transport, Storage and Communications

Overview **T**he transport, storage and communications sector witnessed improved performance in 2009, largely supported by significant growth recorded in communications sub-sector. Other factors contributing to the growth of the sector include improved performance of the tourism industry, enhanced activities in road and efficiency in cargo handling at the port of Mombasa.

14.2. The number of newly registered vehicles recorded a decelerated growth of 32.8 per cent down from 42.8 per cent in 2008. The growth was mainly propelled by a high registration of motor and auto cycles which accounted for 56.3 per cent of the total units registered. The total number of reported traffic accidents increased from 9,093 in 2008 to 12,369 in 2009. The railway transport sub-sector recorded improvements in passenger traffic, but freight tonnage declined for the second consecutive year which could be attributed to poor rail infrastructure.

14.3. The volume of cargo handled at the port of Mombasa expanded by 16.8 per cent, largely fuelled by imports. Total pipeline throughput of white petroleum products recorded a growth of 12.3 per cent with domestic consumption amounting to 3,155.3 thousand cubic metres in 2009. Total passenger traffic at the main airports expanded by 8.0 per cent mainly attributed to the recovery of tourism industry (from the effects of post election violence in early 2008).

14.4. The communications sub-sector continued to witness improved performance, with the mobile telecommunications maintaining an upward trend by posting a 34.2 per cent growth in the subscriber base in 2009. As Telkom Kenya and Essar Telecoms continued to expand their customer base, fierce competition emerged, resulting to lower tariffs, increased access and affordability of communications services. The industry witnessed the issuance of 2 cable landing rights licenses to The East Africa Marine System (TEAMS) and Sea Submarine Communications (SEACOM) Limited. The landing of the under sea cables on the Kenyan coast not only brought closer the prospect of cheap and high speed communication in the country, but also ensured affordability and improved international connectivity between Kenya and the rest of the world. Another milestone included the successful launch of digital television broadcasting during the year.

Value of Output 14.5. Details of output values for various transport and communications sub-sectors are presented in Table 14.1. The sector posted an output value of KSh 541.6 billion compared to KSh 527.9 billion in 2008. This represented a decelerated growth of 2.6 per cent compared to a 12.3 per cent growth in 2008. The Road Transport sub-sector continued to dominate the the Transport and Communications sector with a contribution of 52.7 per cent of the total output value in the reveiw period.

Table 14.1: Transport and Communications - Value of Output, 2005 -2009

Road Transport

Roads 14.6. During the review period, the Government continued with the implementation of the reforms initiated in the roads sub-sector in 2007. The Kenya Roads Act 2007 established three semi-autonomous road agencies with the overall objective of improving the efficiency in the management of roads, thereby promoting competitiveness and value for money. The agencies are: Kenya National Highways Authority (KeNHA), Kenya Rural Roads Authority (KeRRA) and Kenya Urban Roads Authority (KURA). These agencies were operationalised in 2009 with specific objectives of development and maintenance of the national, district and urban road network.

14.7. Table 14.2 presents details of funds disbursed from the Roads Maintenance Levy Fund (RMLF) for purposes of roads maintenance in the country. In 2009/2010 financial year, total funds allocated increased by 3.3 per cent to KSh 20.0 billion from KSh 19.4 billion in 2008/09 financial year.

14.8. Total earnings from road transport sub-sector posted a growth of 4.5 per cent in 2009, to stand at KSh 285.4 billion, as shown in Table 14.3. Earnings from passenger traffic contributed 54.6 per cent of the total earnings realized in the road transport industry in 2009.

Table 14.3: Earnings from Road Traffic, 2005 - 2009

⁺ Revised

New Registration of Motor Vehicles

14.9. The number of newly registered motor vehicles is shown in Table 14.4. The total number of units registered posted a 32.8 per cent increase to stand at 161,813 in 2009. The increase is mainly attributed to higher registration of motor and auto cycles which rose significantly, accounting for 56.3 per cent of the total registered units. Motor and auto cycles have become popular across the country. In rural areas, they have provided relief to long transport queues, while in urban areas they have supplemented both passenger transport and mail delivery. There was an 11.5 per cent increase in the registration of station wagons from 24,747 units in 2008 to 27,599 units in 2009. These make of vehicles are the major mode of motorised passenger transport in the smaller urban centres.

Table 14.4: New Registration of Road Motor Vehicles, 2005 - 2009

	Number

Road Licenses

14.10 The number of driving licenses issued dropped by 3.2 per cent from 202,840 in 2008 to 196,266 in 2009, as presented in Table 14.5. Whereas original and duplicate driving licenses dropped by 3.5 per cent and 2.5 per cent respectively, foreign driving licenses rose by 7.8 per cent. The drop in the issuance of original driving licenses could be partly explained by decreased registration of vehicles especially in the categories of saloon cars, mini buses/matatu, panel vans/pick-ups and lorries/trucks which are potential sources of employment for newly trained drivers.

Road Traffic Accidents

14.11. Details of road traffic accidents recorded in the country are shown in Table 14.6. The number of reported traffic accidents increased by 36.0 per cent to 12,369. Similarly, the total number of persons injured or killed through road traffic accidents rose from 21,420 in 2008 to 26,622 in 2009. The increase in road traffic accidents can be attributed to the flouting of road transport safety rules and regulations by the operators of the passenger service vehicles and other road users. In 2009, human (driver/cyclist) error was singled out as a major cause of reported road accidents in the country. In an effort to reverse the situation, the Government, through the Ministry of Transport (MoT) and other stakeholders in the road transport sector, has developed a comprehensive five-year National Road Safety Action Plan (2009-2014). The plan is to provide mechanisms of improving the road safety knowledge, drivers' skills and safety needs for non-motorised transport, among others. In addition, the National Road Safety Council was re-constituted to co-ordinate road safety efforts and initiatives with a view to reducing road carnage in the country.

Table 14.6: Road Traffic Accidents, 2005 - 2009

Railway Transport

14.12. Table 14.7 shows the traffic performance of the railway transport sub-sector. Freight tonnage transported declined further by 5.9 per cent from 1,628 thousand tonnes in 2008 to 1,532 thousand tonnes in 2009. The drop in tonnage ferried was reflected in revenue earned from freight traffic then dropped from KSh 4.3 billion in 2008 to KSh 4.0 billion. However, the sub-sector recorded improved performance in passenger traffic with revenue rising by 65.8 per cent after a drop of 26.2 per cent in 2008. Some of the factors that impacted negatively

on the performance of the railway transport sub-sector over the period included poor rail infrastructure and obsolete equipment which resulted in high transportation and maintenance costs, leading to reduced profit margins. The sub-sector also faced competition from major road transporters. To address some of these challenges, the Governments of Kenya and Uganda allowed restructuring of the Rift Valley Railways (RVR) concession to enable injection of the additional capital and managerial skills.

Water Transport

14.13. Table 14.8 shows port traffic at the port of Mombasa. Traffic throughput handled at the port of Mombasa increased by 16.1 per cent to 19,062 thousand tonnes in 2009 compared to 16,415 thousand tonnes in 2008. The increase in cargo traffic was largely due to increase of imports which accounted for 86.6 per cent of the total cargo handled. Total imports grew by 24.0 per cent to 16,508 thousand tonnes in 2009 from 13,311 thousand tonnes in 2008. Imports of dry bulk commodities posted a significant increase of 60.5 per cent in the period under review. This category registered 4,641 thousand tonnes in 2009 from 2,891 thousand tonnes in 2008 which was largely on account of the bulk importation of maize, wheat, fertilizer and clinker. Total exports declined by 8.8 per cent mainly on account of the global economic recession. The total number of motor vehicle units landed at the port of Mombasa rose to 95,798 from 87,284 in 2008, registering a 9.8 per cent increase.

14.14. Container traffic grew marginally from 615,733 Twenty-foot Equivalent Units (TEUs) handled in 2008 to 618,816 TEUs in 2009. Transit traffic rose from 4,875 thousand tonnes in 2008 to 4,980 thousand tonnes in 2009. Transshipment traffic posted a 74.9 per cent decline in 2009, registering 105 thousand tonnes compared to 419 thousand tonnes recorded in 2008.

Table 14.8: Traffic handled at Mombasa Port, 2005 – 2009

DWT - Deadweight Tonnes

Pipeline Transport 14.15. Pipeline throughput of white petroleum products for the last five years are presented in Table 14.9. Total pipeline throughput increased by 12.3 per cent to 4,323.7 thousand cubic metres in 2009 from 3,848.6 thousand cubic metres in 2008. The increase in throughput was due to increased demand for white petroleum products in the country and the region. Domestic consumption accounted for 73.0 per cent of the total white petroleum products handled by the Kenya Pipeline Company (KPC) in 2009. Throughput for white petroleum products exported declined by 3.9 per cent from 1,215.0 thousand cubic metres in 2008 to 1,168.0 thousand cubic metres in 2009 on account of declines in kerosene illuminating oil and light diesel exports.

14.16. The pumping capacity constraints continued to be a challenge for KPC during 2009. To counter this, KPC is undertaking various capacity enhancement projects such as the Mombasa – Nairobi and Nairobi – Western Kenya pipeline systems enhancements to improve flow rate. During the review period, KPC commissioned the Mombasa – Nairobi pipeline (Line 1) capacity enhancement project. The project entailed the construction of four additional pumping stations at Samburu, Manyani, Makindu and Konza. The Company also upgraded the Kipevu Oil Storage Facility (KOSF) leading to a stable flow rate of 810 cubic metres per hour. The Western Kenya Pipeline extension which was commissioned in 1994 reached its designed full pumping capacity of 220 cubic metres per hour during the review period. The KPC is currently constructing a parallel pipeline from Nairobi to Eldoret to increase the flow rate to about 394 cubic metres per hour in phase 1 of the project.

Air Transport 14.17. **Passenger Traffic:** Information on commercial traffic handled at main airports is presented in Table 14.10. The aviation industry posted a notable growth of 8.0 per cent in passenger traffic, reversing a 9.4 per cent drop recorded in 2008. A total of 6,888.2 thousand passengers were recorded in 2009 against 6,376.0 thousand passengers recorded in 2008. The growth was partly attributed to the ongoing recovery of the tourism sector and introduction of new routes by Kenya Airways (KQ). Passenger traffic through Jomo Kenyatta International Airport (JKIA) and Moi International Airport (MIA) increased by 6.9 per cent and 25.6 per cent, respectively during the review period. Overall, JKIA continued to be the busiest airport accounting for 73.7 per cent of total passenger traffic in 2009.

14.18. **Cargo and Mail Traffic:** Cargo traffic dropped by 12.3 per cent from 320.3 million tonnes in 2008 to 281.1 million tonnes handled in 2009. The decline in total cargo handled was attributed to a general decrease in cargo loaded at all airports for export. This could be explained by the reduced demand for horticultural produce, which form the bulk of export cargo. However, total mail traffic recorded a decelerated growth of 7.2 per cent in 2009 compared to a growth of 26.2 per cent recorded in 2008. Total mail traffic through JKIA recorded a growth of 7.7 per cent in 2009, following increased mail traffic for both landed and loaded mail categories.

*Provisional.

14.20. There was a reduced number of installed private letter boxes by 2.2 per cent from 414 thousand in 2008 to 405 thousand in 2009. On the other hand, use of letter boxes increased from 339 thousand to 350 thousand over the same period. Usage of private bags, however, declined by 5.2 per cent to stand at 846 thousand in the review period. The total number of Expedited Mail Service (EMS) items handled increased by 244 thousand in 2009.

14.21. The total registered and insured domestic and international items posted decreased by 368 thousand items to stand at 1,368 in 2009. This is explained by a 23.5 per cent drop in the domestic items posted that form the bulk of the total registered and insured items posted during the year under review. Likewise, the volume of unregistered correspondence handled for both domestic and international destinations dropped by 7 million, a decline of 7.3 per cent. The total parcels handled declined for the third year in a row. Domestic and international parcels handled decreased by 59.0 per cent and 41.3 per cent to stand at 25 thousand and 44 thousand, respectively. This could be explained by the growing competition from private and licensed courier operators in the market.

14.22. The number of money orders issued dropped further by 51.6 per cent from 1,733 thousand in 2008 to 838 thousand in 2009. This was occasioned by a sharp decline in the use of Electronic Funds Transfer (EFT)/Posta Pay service by Postal Corporation of Kenya

(PCK) customers from 1,121 thousand to 466 thousand in 2009. The number of ordinary and express money orders issued registered negative growths of 27.6 per cent and 68.6 per cent, respectively. The drop in use of money orders could be due to availability of alternative modes of electronic money transfer through the use of mobile phones .

Telecom-munications 14.23. The performance of the telecommunications sub-sector is presented in Table 14.12. The sub-sector registered a remarkable growth as evidenced in improved tele-accessibility which rose from 36.4 per cent in 2008 to stand at 46.8 per cent in 2009. This implies that currently, almost half of the country's population has access to telecommunications services. Mobile phone connections expanded further by 34.2 per cent from 12.9 million connections in 2008 to 17.4 million connections in 2009. The mobile telephony capacity increased from 26.0 million in 2008 to 29.0 million in the review period.

Fixed Line and Wireless Telephones 14.24. The capacity of fixed lines, Code Division Multiple Access (CDMA) and other wireless lines rose by 19.4 per cent from 612 thousand in 2008 to 731 thousand in 2009. The subscriber base increased by 32.1 per cent to 696 thousand connections for both fixed and wireless services leading to an increase of 0.4 percentage points in fixed tele-density in 2009. The subscriber growth came mainly from wireless connections which accounted for 64.4 per cent of the total connections. The demand for fixed line connection dropped significantly by 72.4 per cent to 2,259 in 2009, reflecting a shift to the use of mobile phones.

*Series revised

14.25. During the year under review, the Government implemented the installation of the Fibre Optic National Network (FONN) and the TEAMS projects. The industry witnessed the issuance of two (2) cable landing rights licenses to the TEAMS Limited and SEACOM Limited. The submarine cable which was launched in the review period will enhance affordability for users and improved international connectivity between Kenya and the rest of the world. The ongoing construction of a fibre optic link connecting all district headquarters in the country will boost considerably the national transmission infrastructure in the country once completed.

Mobile Telephony	<p>14.26. The mobile telephony sub-sector continued to experience intense competition among the four operators – Safaricom Limited, Zain Kenya Limited, Telkom Kenya Limited and Essar. The increased competition was attributed to the rollout of mobile services by new players and expansion of networks of the then existing operators. This further led to intensified promotional offers that resulted in lower call charges, accessibility and affordability of mobile telephony services. Major developments were also noted in the service delivery innovations in the use of mobile telephones. There was intensified provision of financial services via mobile phones by most mobile operators, enabling subscribers to transfer money without the need of holding bank accounts. The mobile phone money transfer subscribers increased to 7.7 million by December, 2009 up from 5.5 million as at December, 2008. The volume of Short Messaging Service (SMS) increased to 3,284.7 million from 361.9 million in 2008.</p>
Internet Penetration	<p>14.27. The internet market continued to expand with the total number of internet users estimated at 3.6 million in June 2009 up from 3.4 million in June 2008. The increase in the number of internet users could be attributed to innovations in internet access by operators from simple personal computer through mobile handsets and portable broadband internet modems. The number of Internet Service Providers (ISPs) issued with licenses by the Communications Commission of Kenya (CCK) was 153 out of which 52 were active/operational compared to 56 in 2008 as shown in Table 14.12.</p>
	<p>14.28. Broadcasting: During the year under review, the regulatory framework was enhanced when Parliament enacted the Kenya Communications Amendment Act, 2009. The new law expanded the mandate of the CCK to include regulating broadcasting and electronic transactions. Under the new law, penalties were also introduced for cyber related crimes.</p>
Information and Mass Media	<p>14.29. The CCK continued to play an active role in national efforts towards transition from analogue to digital broadcasting which culminated in the launch of digital TV broadcasting, a major milestone in the sub-sector. The transition from analogue to digital TV broadcasting is expected to improve the quality of content produced. As shown in Table 14.13, the number of TV frequencies in operation remained constant at 81 following a decision by CCK to discontinue assignment of analogue TV frequencies in order to prepare the country for transition to digital TV broadcasting. In 2009, a total of 28 Frequency Modulation (FM) new frequencies were assigned to broadcasters compared to 30 FM frequencies assigned in 2008. These included frequencies assigned to the Kenya National Assembly (22), Kenya Broadcasting Corporation (2) and private broadcasters (4). The FM frequencies assigned to the Kenya National Assembly will facilitate live broadcasts of parliamentary proceedings. During the review period, CCK revoked nine (9) FM broadcasting frequencies due to failure by licensees to utilize them within the stipulated period. The number of FM frequencies in use rose from 268 in 2008 to 303 in 2009. During the period under review, the implementation of the Digital Video Broadcasting-Handheld (DVB-H) mobile broadcasting network expanded to Mombasa, Nakuru, Kisumu and Eldoret.</p>

14.30. To provide internet access as well as build Information Communication and Technology (ICT) capacity to communities in un-served and under-served areas, the Government, through CCK, continued to support 16 school based ICT centres and 4 community access points established in 2007 by meeting the cost of internet connectivity and maintenance of equipment and software.

14.31. **Print Media:** Table 14.14 presents the number of local daily and weekly newspapers circulated. The number of English daily newspapers circulated expanded by 2.5 per cent from 99,369 thousand copies in 2008 to 101,853 thousand copies in 2009. Similarly, Swahili daily newspapers in circulation witnessed further growth of 4.3 to reach 8,190 thousand copies over the same period. The readership of the English weekly newspapers posted an impressive growth of 29.2 per cent from 12,601 thousand recorded in 2008 to 16,282 thousand in 2009. The Swahili weeklies introduced in 2007 continued to gain popularity, recording a growth of 15.4 per cent during the period under review.

Chapter 15

Governance

Overview

The Government's current blue print Vision 2030 recognizes public safety, law and order as one of the foundations on which economic performance is based. The efficient enforcement of law, maintenance of public safety, guaranteeing of law, and access to justice, safety and the right to live without fear are important elements for economic development of a country. Crimes reported increased by 13.8 per cent from 63,476 in 2008 to 72,255 in 2009. Total ammunition recovered and surrendered increased tremendously from 9,621 in 2008 to 114,527 in 2009 while firearms recovered and surrendered stood at 423 and 163, respectively, during the same period. The total number of persons reported to have committed offences during the period also increased by 22.9 per cent from 61,438 in 2008 to 75,501 in 2009. At the same time, the total number of persons reported to have been involved in offences related to dangerous drugs increased by 41.4 per cent whereas that of persons reported to have caused criminal damage declined by 28.9 per cent.

15.2. Corruption cases handled by Kenya Anti-Corruption Commission (KACC) increased by 15.6 per cent to 4,473 in 2009. The prison population increased by 22.2 per cent from 88,414 in 2008 to 108,032 as at December 2009. In the same period, Daily Average Population (DAP) of prisoners increased by 11.9 per cent. There was a 21.3 per cent reduction in the number of offenders put on probation while those serving community service increased by 15.2 per cent. The number of entry permits renewed increased by 80.3 per cent from 3,302 in 2008 to 5,953 in 2009 while passports issued increased by 19.4 per cent in the same period.

Public Safety, Law and Order

15.3. Public safety, law and order refers to the provision of security, making of good laws, ensuring good governance, and maintaining law and order. In the period under review, crimes reported to the police increased by 13.8 per cent from 63,476 in 2008 to 72,255 in 2009 as detailed in Table 15.1. Reported crimes related to morality, theft of stock, handling of dangerous drugs, against persons and economic crimes recorded increases of 30.6, 26.8, 25.7, 24.5 and 22.4 per cent, respectively.

¹ Traffic offences as defined in Appendix 15.1

15.4. Table 15.2 gives the breakdown of offences reported to the Police from 2005 to 2009. The highest number of crimes were reported in Rift Valley Province which almost doubled to stand at 19,716. The second highest number was recorded in Eastern Province though it was only 3.1 per cent higher than 2008 levels. In the same period, cases of crimes reported in Central, Coast and Nyanza Provinces declined by 2,201, 348 and 18 respectively.

Table: 15.2: Number of Crimes Reported to Police by Province, 2005– 2009

¹ Kenya Police Services considers Kenya Airports Police Unit (KAPU) and Railways as provinces

15.5. Proliferation of small arms from the neighbouring countries is one of the factors contributing to the rising cases of insecurity in the country in the recent past. To curb this challenge, the Government has been giving amnesty to persons who voluntarily surrender the small arms. Other measures include strengthening and harmonizing legislation, increasing cross-border co-operation between neighbouring countries, improving police-community relations and public education and awareness-raising. Table 15.3 presents data on firearms and ammunitions recovered or surrendered to the Government from 2005 to 2009. Total ammunitions either recovered or surrendered increased tremendously from 9,621 in 2008 to 114,527 in 2009 mainly on account of ammunition recovered. Total firearms recovered reduced by 40.9 per cent from 716 in 2008 to 423 in 2009 while those surrendered declined by 51.2 per cent.

Table 15.3: Firearms and Ammunitions Recovered/Surrendered, 2005-2009

15.6. As indicated in Table 15.4, the total number of persons reported to have committed crimes increased by 22.9 per cent from 61,438 in 2008 to 75,501 in 2009. Out of this, about 86 per cent were males. Nairobi Province recorded the highest percentage increase in persons reported to have committed offences, followed by Rift Valley and Western. Through the number of persons reported to have committed crimes in Central Province declined in the review period, that of females rose by almost a third.

15.7. As shown in Table 15.5, the total number of persons reported to have committed offences against morality and other offences against persons increased by 24.6 per cent from 20,241 in 2008 to 25,230 in 2009. Whereas the number of persons reported to have committed offences against morality increased by 20.8 per cent, that of persons who had committed crimes against other persons increased by 25.3 per cent. The data further shows major reductions in crimes among females for offences against morality and increases for offences against other persons. Major increases in offences committed by males were reported for incest, abduction and defilement.

15.8. In Kenya, cases of homicide constitute a capital offence punishable by death. Table 15.6 presents the number of persons reported to have committed homicide offences by sex from 2005 to 2009. There was a marginal increase in the homicide offences reported in the period under review. The data shows high increment in cases of infanticide, death by dangerous driving and manslaughter. However, reductions in crime were noted in procuring abortion, concealing birth, suicide and murder. Analysis by sex shows major increase in offences committed by females.

15.9. Information on persons reported to have committed robbery or theft by use of force or threat from 2005 to 2009 is presented in Table 15.7. The number of persons reported to have committed offences related to theft by servant and theft of stock, increased by 61.1 and 49.8 per cent, respectively, in 2009. The data further shows that the number of persons reported to have committed robbery and, theft of vehicles and other thefts reduced by 2.4 and 2.7 per cent, respectively. Major increases were reported for persons who committed offences of robbery of motor vehicles and stealing by employees/servants. The offences that recorded declines included car-jacking, cattle rustling, stealing from buildings, stealing by agents and handling stolen property.

15.10. Table 15.8 presents the number of persons reported to have committed offences related to dangerous drugs and criminal damages. The data reveals major increases in the number of persons reported to have committed offences of drug usage, handling, trafficking and possession. However reductions were reported for cultivation of dangerous drugs. Under criminal damage, reductions were reported for acts of negligence and arson.

15.11. As indicated in Table 15.9, the number of persons reported to have committed offences related to economic crimes, corruption and those involving police officers increased by 1,061, 167 and 82, respectively, in 2009. There was a significant increase in the number of persons reported for having solicited for bribes, fraud/forgery, currency forgery and accepting bribes during the same period. Only false accounting crimes recorded a decline.

Cases handled by Kenya Anti-Corruption Commission

15.12 Kenya Anti-Corruption Commission (KACC) was established by an Act of Parliament for the purpose of fighting corruption. Table 15.10 presents the number of corruption cases handled by KACC for the period 2005 to 2009. The data shows that corruption cases handled by KACC increased by 15.6 per cent to 4,473 in 2009. The greatest increase was noted for cases referred to public service organizations for administrative interventions and those awaiting investigations. The number of corruption cases forwarded to the Attorney General (AG) reduced by 26.0 per cent from 126 in 2008 to 93 in 2009. The number of corruption cases registered increased from 76 in 2008 to 83 in 2009 while that of convictions reduced from 11 to 6 in the same period.

Cases handled by Public Prosecutions

15.13. The main role of the Department of Public Prosecution is to undertake criminal prosecutions. Table 15.11 shows murder cases registered and convictions obtained from 2005 to 2009. The number of murder cases registered decreased from 939 in 2008 to 927 in 2009 while that of convictions obtained reduced by 60.

R - Registered murder cases

C - Murder convictions obtained

15.14. The Kenyan Judiciary is charged with the duty and the power to adjudicate on cases between individuals or between the individual and the state on issues relating to property or liberty. The courts cover civil, criminal, family, commercial, constitutional/judicial review, anti-corruption, city/municipal and children's laws. Table 15.12 shows different types of cases filed, pending and those disposed of in the Law courts in the last five years. There was an increase in the number of cases filed by 15.6 per cent from 347,169 in 2008 to 401,295 in 2009 while those disposed of rose by 17.5 per cent to 420,901 in the same period. However, total pending cases reduced by 12.0 per cent from 788,595 in 2008 to 696,726 in 2009. Pending miscellaneous cases more than tripled while land cases disposed of more than doubled. The highest reduction was noted for pending affiliation cases.

15.16 . Table 15.14 shows the convicted prison population by age and sex from 2005 to 2009. The prison population increased by 22.2 per cent to 108,032 in 2009. Male prisoners increased by 17,313 while females increased by 2,305 in the period under review. The prison population aged under 16 years recorded a high decline in 2009. This was on account of the decline in the male prison population under this age group. On the other hand, the prison population for the youth aged 21-25 years increased. In this category, the population of females increased by 72.0 per cent whereas that of males increased by 51.0 per cent. Females still constitute a much lower proportion of 10.4 per cent of all prison population.

15.17. Table 15.15 gives the Daily Average Population (DAP) of prisoners by sex for the period 2005 to 2009. The total DAP increased by 11.9 per cent from 46,603 in 2008 to 52,142 in 2009. The DAP of convicted prisoners increased by 19.7 per cent from 25,429 in 2008 to 30,431 in 2009 while that of remandees increased by 2.5 per cent in the same period. The highest rise of DAP was noted for convicted female prisoners. Similarly, DAP of remanded females was higher at 15.8 per cent compared to the 1.9 per cent of males.

15.18. Table 15.16 shows the prison population by duration of sentence from 2005 to 2009. The total convicted prison population increased by 22.2 per cent from 88,242 in 2008 to 108,032 in 2009. Remandees constituted 45.7 per cent followed by persons jailed for one month to 2 years. A higher increase of 41.6 per cent was observed for convicts jailed for a minimum of 2 years. Females constituted 10.6 per cent of the convicts in 2009 with the largest number being sentenced to between one month and two years..

15.19. Table 15.17 shows the number of convicted prisoners by type of grouped offences. A large increase of 51.7 per cent of convicted prisoners was noted for offences related to employment of aliens without work permits, followed by those related to order and administration of lawful authority. The highest increase was recorded for females jailed for various cases. However, there was a major reduction in the number of females convicted over drug related offences.

1. Treason, incitement to mutiny, and aiding civil disobedience
2. Stealing govt. property, stealing by person in public service, stealing from state corporations
- 3: Assault, grievous harm, murder etc
- 4: Theft, robbery with violence, arson
- 5: Attempts to commit offences, neglect to prevent offence, conspiracies to commit offences
- 6: Employment of aliens without permit
- 7: Possession, manufacture, trafficking etc of any quantity
- 8: By- laws under the local govt. act, traffic act, tax act et

15.20. Information on police, prison and probation officers from 2005 to 2009 is presented in Table 15.18. The total number of Police officers reduced by 8.4 per cent while that of Prison and Probation officers increased by 7.3 and 32.7 per cent, respectively. The number of female officers in probation, police and prisons increased by 45.3, 17.4 and 5.2 per cent, respectively. Male police officers reduced by 10.5 per cent while male probation and prison officers increased by 24.8 and 7.7 per cent, respectively.

Table 15.18: Number of Police, Prison and Probation Officers by Sex, 2005 – 2009

Convicted Prisoners handled by Probation and Aftercare 15.21. To decongest the prisons, non-custodial sentences such as community service are used by courts as an alternative to serving full jail terms. Table 15.19 gives the number of offenders on probation and community service by sex and type of offence committed. There was a reduction in the number of offenders put on probation by 21.3 per cent from 17,529 in 2008 to 13,788 in 2009. In the review period, the number of male offenders on probation reduced by 27.4 per cent whereas that of females increased by 28.0 per cent. The number of adult females on probation for murder increased from 3 in 2008 to 85 in 2009.

15.22. Table 15.20 presents the number of offenders serving community service order by sex and type of offence for the period 2005 to 2009. The number of offenders serving community service order increased by 15.2 per cent from 30,813 in 2008 to 35,488 in 2009. This was on account of the increase in absolute terms of male population.

15.23. As presented in Table 15.21, the number of offenders serving aftercare rehabilitation by sex and type of offence from 2005 to 2009. There was a reduction of 36.2 per cent in the number of persons serving aftercare rehabilitation from 986 in 2008 to 678 in 2009. Whereas the number of females serving aftercare rehabilitation increased from 8 to 54, that of males reduced by 31.2 per cent from 978 in 2008 to 624 in 2009.

Economic Survey 2010

Cases of 15.24. Table 15.22 shows the number of general cases handled by the department of children services. The cases handled reduced from 904 in 2008 to 195 in 2009. The highest cases were **Handled by** reported for children in conflict with law. Similarly, as indicated in Table 15.23, the number of **Department** cases handled by type of crime reduced from 310 in 2008 to 152 in the period under review. **of Children**

Voter Registration

15.25. Parliament established the Interim Independent Electoral Commission (IIEC) through Section 41A of the Constitution of Kenya following the disbandment of Electoral Commission of Kenya (ECK) in December 2009. No national voter registration exercise was undertaken in 2008 and 2009.

Table 15.24: Number of Registered Voters by Province and Sex, 2004 - 2007

Aliens 15.26. The data presented in Table 15.25 reveals that the number of entry permits renewed increased from 3,302 in 2008 to 5,953 in 2009, while passports issued increased by 19.4 per cent to 153,266 over the same period. The number of aliens registered increased by 7.4 per cent from 17,451 in 2008 to 18,751 in the period under review. On the other hand, the number of entry permits declined from 11,530 in 2008 to 11,096 in 2009.

Chapter 16

The Revised Urban Consumer Price Index

Overview The Consumer Price Index (CPI) is a measure of the aggregate change in the retail prices paid by consumers for a given fixed basket of goods and services. This basket is normally re-priced at regular intervals, and the cost aggregates compared with those of the same basket in a selected base period. The CPI is widely used for estimation of the rates of inflation, as a tool in wage negotiations and as a deflator of various macroeconomic indicators. It is of paramount importance that the compilation of the index be based on an unbiased formula and on baskets that reflect the most recent consumption patterns.

16.2. The 2005/06 Kenya Integrated Household Budget Survey (KIHBS) findings revealed that there had been changes in the consumer behaviour, incomes, tastes and preferences. This formed the basis for revising the basket of consumer goods and services, the commodity weights, as well as adoption of new income groups. A new index with base period set at February 2009 has been adopted. The geometric mean formula is used in the compilation of the new index and the 12 Division Classification of Individual Consumption by Purpose (COICOP) has been adopted.

Income Groups and Baskets 16.3. For comparability purposes, it is useful to categorize the population into relatively homogeneous groups based on their monthly expenditure. For instance, consumers with low incomes may tend to spend a greater proportion of their income on food and other very basic necessities, while those with higher incomes might spend more of it on luxuries. From the 2005/06 KIHBS, three income groups (lower, middle and upper) were identified for Nairobi province. The categorisation of the income groups was based on consumption patterns and is as follows; lower income group, below KSh 23,670; middle income group, between KSh 23,671 and KSh 120,000 and upper income group above KSh 120,000.

16.4. The new CPI adopted 10 baskets of goods and services, three in Nairobi province (one each for lower, middle and upper incomes) and one for each of the other seven provinces. The new baskets comprise of 234 distinct commodities up from 216 in the previous baskets. In each province, items that had expenditure of 0.05 per cent and above were selected into the basket. Table 16.1 presents the distribution of the items in each province.

Table 16.1: Number of Commodities in the New Urban CPI Baskets

Basket	Number of Items
Nairobi	
Nairobi Lower	181
Nairobi Middle	190
Nairobi Upper	146
Central	184
Coast	187
Eastern	203
North Eastern	136
Nyanza	197
Rift valley	207
Western	190
Kenya	234

16.5. Some of the new items in the new baskets include; Fresh milk un-packeted, Pork meat, Arrow roots, Wimbi flour, Black grams (njahi), Capsicum (pilipili hoho), Camel meat, Mineral water, Laboratory tests, Optician services, Parking charges, Bicycle (Boda-boda) fares, Cell phone air time, Internet costs, Cellular handset, Computer, Primary and secondary schools transport. The number of towns where retail prices are collected remained 25 as in the previous CPI series, though the Bureau plans to expand the coverage to other major towns (based on Expenditure).

**Geometric
Mean
Methodology**

16.6. Compilation of CPI is a hierarchical process that starts with indices at an elementary level which are then aggregated to higher levels. Weights are usually applied at higher levels of aggregation. In the old CPI, the arithmetic formula was used to average the price relatives at the elementary level. Within items, the old practice was to compute unweighted arithmetic averages of price relatives. The resultant index (Carli Index) had an upward bias and was too sensitive to extreme price changes. As recommended by the International Labour Organization (ILO) CPI manual (2004), the geometric mean approach (Jevons Index) is preferred and adopted at the elementary level due to its property of producing a more stable index. The modified Laspeyres formula is then adopted for use at the higher levels of aggregation.

16.7. Taking I_t to be the index at time t , P_{ti} as the price of the i^{th} commodity at time t , p_{0i} as its price at the base period and W_i as its weight, then Index at time t is computed as,

$$I_t = \frac{\sum_{i=1}^n \frac{P_{ti} Q_{0i}}{\sum_{i=1}^n P_{0i} Q_{0i}}}{\sum_{i=1}^n P_{0i} Q_{0i}} * \left[\frac{P_{ti}}{P_{0i}} \right] = \sum_{i=1}^n W_{0i} * \left[\frac{P_{ti}}{P_{0i}} \right]$$

and the modified Laspeyres index at time t is subsequently defined and computed as,

$$I_t = \sum_{i=1}^n W_{0i} * \left[\frac{P_{ti}}{P_{0i}} \right] = \sum_{i=1}^n W_{t-1,i} * \frac{P_{t,i}}{P_{t-1,i}}. \text{ The modified Laspeyres formula uses short-term}$$

price relatives ($\frac{P_{t,i}}{P_{t-1,i}}$), and is algebraically equivalent to the standard Laspeyres formula

which uses long term price relatives, ($\frac{P_{ti}}{P_{0i}}$). The chaining process facilitates the introduction of replacement transactions, the introduction of new varieties and new products as need

arise. Each item's short-term price relative $\frac{P_{t,i}}{P_{t-1,i}}$ is weighted by its previous period expenditure share, $W_{t-1,i}$. This is the base period value share, W_{0i} , updated for price changes to the previous period, (t-1). The formula can bring in a new transaction with the current and previous prices of the replacement transaction without imputing the base period price.

Classification of Individual Consumption by Purpose (COICOP) 16.8. The classification of items in the new CPI is based on COICOP as recommended by the ILO CPI Manual 2004. The advantage of using COICOP classification is for international comparison of CPI and inflation. The items in the old baskets were categorized in 10 broad groups which did not exactly conform to the 12-division COICOP. Table 16.2 gives a comparison of the 10 groups and the current 12 divisions. Transport and communications initially given as one division has been split into Transport and Communication. Likewise, the Recreation, Entertainment and Education group was split into Recreation/Culture and the Education broad separate groups.

Table 16.2: Comparison between the Ten Groups and the Twelve Divisions COICOP

Group	Previous CPI Series	Division	New CPI series
1	Food and non-alcoholic drinks	1	Food & Non-Alcoholic Beverages
2	Alcohol and Tobacco	2	Alcoholic Beverages, Tobacco & Narcotics
3	Clothing and Footwear	3	Clothing and Footwear
4	Housing	4	Housing, Water, Electricity, Gas and other Fuels
5	Fuel and Power		
6	Household Goods and Services	5	Furnishings, Household Equipment and Routine Household Maintenance
7	Medical Goods and Services	6	Health
8	Transport and Communications	7	Transport
		8	Communications
9	Recreation, Entertainment and Education	9	Recreation & Culture
		10	Education
		11	Restaurant & Hotels
10	Personal Goods and Services	12	Miscellaneous Goods & Services

16.9. The reclassification of items into the 12 broad categories called for re-computation of the weights for the groups and subgroups. Weights for the broad commodity divisions associated with the three separate resulting baskets for Nairobi are as presented in Table 16.3. Table 16.4 presents similar weights for each of the 7 non-Nairobi provincial baskets.

Weights 16.10. The summary of the expenditure proportion weights as derived from the 2005/06 Kenya Integrated Household Budget Survey were as follows:

Description	Weights (%)
Food & Non-Alcoholic Beverages	36.0
Alcoholic Beverages, Tobacco & Narcotics	2.1
Clothing & Footwear	7.4
Housing, Water, Electricity, Gas and other Fuels	18.3
Furnishings, Household Equipment	6.2
Health	3.1
Transport	8.7
Communication	3.8
Recreation & Culture	2.3
Education	3.1
Restaurant & Hotels	4.5
Miscellaneous Goods & Services	4.5
Total	100.0

Chapter 17: Key Highlights of 2008/09 Kenya Demographic and Health Survey

per cent of women having never attended school. Seven out of every ten men (69 per cent) have at least completed primary level of education compared to six out of ten women (61 per cent). About two-thirds of respondents are Protestant, almost one-quarter are Catholic, and about seven (7) per cent are Muslim.

Table 17.1: Background characteristics of respondents

Percent distribution of women and men by background characteristics, Kenya 2008-09

Fertility Levels and Trends

17.6. According to the survey findings, the Total Fertility Rate (TFR) was 4.6 births per woman as shown in Table 17.2. This means that on average, a Kenyan woman who is at the beginning of her childbearing years will give birth to 4.6 children by the end of her reproductive period if fertility levels remain constant at the level observed in the three-year period preceding the survey. The results indicate that Kenya's fertility transition may have resumed after a brief stall in the late 1990s to mid 2000s. Figure 17.1 shows the trends in TFR from a high of 8.1 births per woman in 1975-78 to 4.6 in 2006-08. Fertility

2008-09 KDHS. The level of under-five mortality was 74 deaths per 1,000 births during the five-year period preceding the survey, implying that at least 1 in every 14 children born in Kenya during the period died before reaching their fifth birthday. The infant mortality rate recorded in the survey was 52 deaths per 1,000 live births.

Table 17.3: Early Childhood Mortality Rates per 1000 live births

Neonatal, postneonatal, infant, child, and under-five mortality rates for five-year periods preceding the survey, Kenya 2008-09

Years preceding the survey	Neonatal mortality (NN)	Postneonatal mortality (PNN) ¹	Infant mortality (1q0)	Child mortality (4q1)	Under-five mortality (5q0)
0 - 4	31	21	52	23	74
5 - 9	35	32	67	29	95
10 - 14	25	34	59	37	93

¹ Computed as the difference between the infant and neonatal mortality rates

17.8. The rates observed in this survey show a remarkable decline in levels of childhood deaths compared to the rates observed in the 2003 and 1998 KDHS surveys as shown in Table 17.4. The infant mortality rate decreased to 52 deaths per 1,000 live births in 2008-09 from 77 in 2003. Similarly, the under-five-mortality rate decreased to 74 deaths per 1,000 live births in 2008-09 from 115 in 2003. The trend implies that the continuing deterioration in the quality of life amongst the Kenyan population that had been witnessed in the earlier surveys has started to reverse. The improvement in child survival is corroborated by increases in child vaccination coverage, and in ownership and use of mosquito bednets (see later sections), both of which have been shown to reduce child mortality.

Table 17.4: Trends in Early Childhood Mortality Rates

Infant and under-five mortality rates, Kenya, 1994-2007

Survey year	Approximate calendar period	Infant mortality (1q0)	Under-five mortality (5q0)
1998	1993-1997	74	112
2003	1998 - 2002	77	115
2008-09	2003 -2007	52	74

Note: Data for the 1998 survey exclude several northern districts

Family Planning

17.9. Information about knowledge and use of contraceptive methods was collected from female respondents and for each method known; the respondent was asked if she had ever used it. Table 17.5 shows the level and key differentials in the current use of contraception by method as reported by currently married women. About half of currently married women (46 per cent) are currently using some method of contraception. Modern methods of contraception are more commonly used (39 per cent) than are traditional methods (6 per cent). Of the modern methods, injectables are the most widely used, while periodic abstinence is the most popular traditional method.

17.10. Contraceptive prevalence peaks among married women in the 30-34 age-group and is lowest for women aged 15-19. A higher percentage of urban women (53 per cent) use contraceptive, compared to their rural counterparts (43 per cent). Married women in Central Province continue to have the highest contraceptive prevalence rate (67 per cent), followed by Nairobi (55 per cent) and Eastern Province (52 per cent). The lowest level of

contraceptive prevalence rate is fuelled by increased use of modern methods. Between 2003 and 2008-09, use of modern methods increased from 32 to 39 per cent of married women, while use of traditional methods over the same time period actually decreased from 8 to 6 per cent of women. Use of female sterilisation, Intra Uterine Devices (IUD), implants and pill remained fairly constant between 2003 and 2008-09, while there was a notable increase in use of injectables.

Figure 17.2 : Trends* in contraceptive Use (Percentage of currently married women using any method)

* Data from the first five sources omit several northern districts, while the 2003 and 2008-09 KDHS surveys represent the entire country

Maternal and Child Health 17.12. Proper care during pregnancy and delivery are important for the health of both the mother and the baby. Table 17.6 presents the results of key maternity care indicators. More than nine in ten (92 per cent) mothers reported visiting a health professional at least once for antenatal care for the most recent birth in the five-year period before the survey. Coverage is slightly higher in urban areas than in rural areas (96 per cent and 90 per cent, respectively). Coverage is also slightly higher among mothers aged 20-34 compared to those below or above this age bracket. Across provinces, the proportion of mothers reporting that they received antenatal care from a health professional is lower in North Eastern (70 per cent) compared with a range of 88-96 per cent in other provinces. The data indicate a marked improvement since 2003 in medical antenatal care coverage in North Eastern province (25 per cent compared to 70 per cent). As the mother's educational level rises, so does the likelihood that she will see a health professional for care during pregnancy. The results show that 72 per cent of women with no education received antenatal care from a doctor, nurse or midwife, compared with 91 per cent of women with incomplete primary education and 96 per cent of those with higher education.

recommended three doses of DPT/pentavalent and 88 per cent receiving all three doses of polio. The decline in coverage levels reflects dropout rates of 10 per cent for DPT/pentavalent and 9 per cent for polio. The dropout rate represents the proportion of children who receive the first dose of a vaccine but do not go on to get the third dose. The proportion of children vaccinated against measles stood at 85 per cent. Immunization coverage in North Eastern and Nyanza Provinces is low compared to other provinces, with only 48 and 65 per cent, respectively. Coverage levels are close to 86 per cent for children in Central Province and 85 per cent for Rift Valley Province. Coverage is also high (87 per cent) among children whose mothers have been to secondary school.

Table 17.7: Vaccinations by Background Characteristics

Percentage of children age 12-23 months who received specific vaccines at any time before the survey (according to a vaccination card or the mother's report), and percentage with a vaccination card seen, by background characteristics, Kenya 2008-09

¹ Polio 0 is the polio vaccination given at birth. The data on polio vaccinations have been adjusted for a likely confusion of polio 0 and polio 1; for children who received three doses of DPT-Pentavalent and polio 0, polio 1, and polio 2, it was assumed that polio 0 was in fact polio 1, polio 1 was polio 2, and polio 2 was polio 3.

² BCG, measles and three doses each of DPT and polio vaccine (excluding polio vaccine given at birth)

Malaria 17.15. One of the strategies in the fight against malaria is sleeping under an Insecticide-Treated Mosquito Nets (ITNs). In the 2008-09 KDHS, data were collected from households on ownership, number and use of mosquito nets. The data in Table 17.8 show that 61 per cent of households in Kenya report owning at least one mosquito net (treated or untreated), while

Domestic Violence 17.18. The domestic violence module asked selected women respondents a series of questions concerning domestic violence as shown in Table 17.9. This was the second time the module on domestic violence was administered in KDHS, the first having been done in 2003. Specifically, women who were married or living with a man, separated, or divorced were asked if their current or most recent husband/partner ever physically harmed them, i.e. by pushing, slapping, punching, kicking, or trying to strangle or burn them or threatening them with a weapon. They were also asked if their husband had ever physically forced them to have sexual intercourse or perform other sexual acts when they did not want to. Due to the sensitivity of these questions, if there was more than one eligible woman in the household, the domestic violence section was administered to only one, randomly selected woman.

Table 17.9: Extent of domestic violence

Percentage of currently married, divorced or separated women reporting physical or sexual violence at the hands of their spouse/partner ever and in the last year by background characteristics, Kenya 2008-09

17.19. The results show that 39 per cent of married, divorced or separated women aged 15-49 report that they have ever been physically or sexually violated by their husbands or partners, while 32 per cent report that they were victims of such violence in the year preceding the survey. Fifteen per cent of women reported that they have ever been sexually abused, while 13 per cent were abused in the past year. The results further show that older women are more likely than younger women to report having ever been beaten or sexually

Table 17.10: Knowledge of HIV Prevention Methods

Percentage of women and men age 15-49 who, in response to prompted questions, say that people can reduce the risk of getting the AIDS virus by using condoms every time they have sexual intercourse, by having one uninfected sex partner who has no other partners, and by abstaining from sexual intercourse, by background characteristics, Kenya 2008-09

Background characteristic	Women					Men
