ECONOMIC SURVEY, 1979

CHAPTER 0—CURRENT APPRAISAL AND OUTLOOK

Given the various constraints which had to be contended with, the economy, under the circumstances achieved a relatively satisfactory rate of growth in 1978, though it was lower than the growth rate registered in the boom year of 1977. The growth rate of GDP at constant prices which has been revised to the high figure of 8.6 per cent in 1977 fell to 5.7 per cent in 1978. In 1978 the terms of trade deteriorated and the balance of payments exhibited substantial difficulties leading in the later part of the year to the tightening of credit restrictions in the domestic economy and the introduction of an import prepayment scheme. The foreign reserves of the monetary authorities which had risen sharply in 1977 fell almost as swiftly in 1978 and at the end of the year were down to K£133.3 million, a fall of K£75.3 million. A substantial rise in capital expenditure had been forecast in the budget of the Central Government for 1978/79 but difficulties arising from a lower than anticipated receipt of revenues and a decline in long-term borrowings meant that the actual capital expenditure although higher than in 1978/79 was substantially below the level of original estimates. Wage employment only rose by one per cent in 1978 due largely to a fall of 8.4 per cent in agricultural employment. The Presidential directive will result in a substantial advance in the numbers employed in 1979.

0.2. The attempts by the larger industrial countries to improve the world economic growth rate had a limited success in 1978. Total GDP in the OECD countries rose by only 3.8 per cent in 1978 and this was accompanied by some fall in the rate of inflation from 9 to 8 per cent. World trade increased by 5 per cent, a rate only a little higher than in 1977. While the impact of higher crude petroleum prices, changes in relative foreign exchange rates and a generally unsatisfactory overall situation is likely to lead to a lower overall GDP growth rate in 1979 compared to that achieved in 1978, inflation appears to be accelerating once again. Balance of payments difficulties will probably have the effect of reducing the growth rate in world trade too. The scheduled and unscheduled increases in the price of crude petroleum, the coming into effect of the European Monetary System, some greater stability in exchange rates with some recovery in both the US dollar and the pound sterling, higher inflation leading to steps to control growth in money supply and little growth in prices of primary commodities excluding petroleum are the major events which will influence the world economic scene in 1979. The overall impact of these events will probably make it difficult for the non-oil developing countries to achieve without further aid the growth rates they achieved in the period 1976 to 1978.

0.3. The movement in relative prices in international trade worked to Kenya's disadvantage in 1978 and a similar trend is likely in 1979. The terms of trade in 1978 fell back; from the favourable level of 120 achieved in 1977

to 103, very close to the level of the base year 1972. This index will almost certainly be below 100 for 1979.

0.4. In the domestic economy the feeling of recovery leading to buoyant economic conditions in 1977 and a relaxation of controls had its own impact which resulted in the import boom of 1978. Many building projects were started and stocks in shops, warehouses and manufacturing establishments rose to high levels. The ensuing fall in prices of coffee and tea in late 1977 and 1978 took its toll of total export earnings. These were reduced from K£502 million in 1977 to K£396 million in 1978 with coffee earnings falling from K£204 million to K£125 million and those of tea from K£72 million to K£63 million. The rest of the fall in export was due largely to lower sales of petroleum products. Exports to Tanzania and Uganda fell by K£21 million. Alongside the reduction of K£106 million in total exports there was a substantial rise in imports from K£531 million in 1977 to K£661 million in 1978. As a result the very small trade deficit of K£30 million in 1977 deteriorated in 1978 to a record level of K£266 million. This change had a major impact on the balance of payments. The current account surplus of K£24 million in 1977 turned into a deficit of K£252 million and this record deficit could only be covered, despite a very large capital inflow of K£171 million, by running down the country's foreign reserves.

0.5. While foreign reserves fell sharply, domestic credit both to the private sector and to the Government rose substantially, with the total reaching K£613 million in December, 1978, K£159 million or 35 per cent higher than the figure of K£454 million recorded for December, 1977. The combined impact of the fall in foreign reserves and the rise in domestic credit was to raise money supply by K£85 million or by 13.7 per cent. This much lower growth in money supply than in 1977 had a marked impact on reducing the inflationary pressure on the economy. The liquidity ratio of commercial banks fell from 28 per cent at the end of 1977 to 22.7 per cent in December, 1978, and their advances/deposits ratio rose from 68.8 per cent to 76.5 per cent over the same period. The growth in domestic credit in the second half of the year was indeed solely due to increased borrowing by the Central Government. The emerging problems over the balance of payments had led to increasing restrictions on credit to the private sector and were aimed at curtailing the propensity to import.

0.6. In 1978 consumer prices went up by an average of 12.5 per cent almost the same as in 1977 and construction costs rose by 8.3 per cent, somewhat more than the rise of 7.4 per cent recorded in 1977. Consumer prices will probably rise by 9 per cent in the financial year 1978/79 over 1977/78 indicating some slowing down of inflation. A low rate of price rises is essential if Kenya's attempts to move to an economy exporting substantial quantities of manufactured products are to have a chance of success.

0.7. The continued commitments entailing high levels of expenditure on defence and education in 1978/79 together with the normal rises in other

expenditures and the impact of price rises, increased the level of Central Government current expenditure by much more than its current revenue receipts. As a result the level of surplus on the Government's current operations fell from the high level of K£72.1 million recorded in 1977/78 to only K£21.4 million in 1978/79. Current revenue receipts from the major direct and indirect taxes have dropped below the level forecast and thus the current surplus realized could not make the contribution that had been expected towards the capital budget. Also the level of long-term borrowing dropped below the estimated forecast. As a result the budgeted capital expenditure of K£270.9 million has had to be reduced to an actual level of about K£215 million. This level of actual capital expenditure is, of course, higher than the capital spending of K£190.3 million achieved in 1977/78 but it means that the first year of the new development plan has got off to only an indifferent start.

0.8. The year 1978 was a poor one for agriculture, Current receipts from marketing boards fell by 20 per cent, while the contribution of agriculture to GDP at current prices fell by 4.2 per cent and there was a small rise of only 1.4 per cent in the value added when measured at constant prices. The fall in export earnings from coffee and tea has already been commented on. Volume of marketed coffee fell back from the peak level of 97,066 tonnes achieved in 1977 to 84,328 tonnes in 1978 while its value was reduced much more significantly from K£192.9 million to K£115.6 million. Also while the volume of marketed production of tea rose from 86,291 tonnes in 1977 to 93,373 tonnes in 1978 its value fell from K£92.7 million to K£71.3 million. There were fairly substantial rises in the value of marketed output of sugar cane and livestock products in particular but these did not compensate for the reduction in the two major products.

0.9. The manufacturing sector achieved a growth of 14 per cent in its volume of output in 1978. This is the third consecutive year of high growth, and has made manufacturing the fastest growing of the productive sectors in the economy. The high level of growth in 1978 was essentially induced by the expansion of domestic demand as higher incomes from the coffee and tea boom of 1977 continued to work their way through the economy. There were high increases in output in a substantial number of subgroups and production of transport equipment in particular was nearly three times as high as in 1977. There was much activity in developing new projects or expanding enterprises. Many of these projects will find their markets in Kenya but their surplus production must find its way to export markets so as to help remove the current bottleneck of balance of payments on the country's development. While there were 14,764 enterprises in the manufacturing sector in 1978 only a very limited number offered any current potential for exports.

0.10. There was a further rise in building and construction activity in 1978 and the level of building plans approved by the local authorities in the main

urban areas together with increasing level of Government activity on construction holds out hope of a continuation of the current level of output. Wage employment in the construction sector rose by 13 per cent in 1978 and there was a growth rate in its contribution to GDP at constant prices of 6.4 per cent. Projects initiated at the time of the coffee boom in 1977 were being developed at a substantial rate in 1978 while in 1978 itself the value of building plans approved by the Nairobi City Council rose by a further 37 per cent to K£58.2 million.

0.11. Imports and domestic production were both at record levels in 1978 and despite some restocking the commerce sector had a very good year with a substantial increase in its contribution to GDP. The increased average level of expenditure of tourists benefitted hotels and restaurants and other tourism associated services despite some fall in the number of visitor-days spent by foreigners in Kenya. Earnings from tourism are estimated at K£60 million in 1978 compared with K£48 million in 1977. While wage employment in wholesale and retail trade, restaurants and hotels was marginally reduced from 60,300 in 1977 to 59,600 in 1978 the level of wages and salaries paid in the sector rose from K£39.8 million to K£44.3 million.

0.12. An increase in the volume of goods handled, higher charges and better working of the domestic organizations set up to replace the corporations previously run by the ex-East African Community led to a substantial rise in output at current prices of the transport and communications sector equal to a satisfactory growth of 5.5 per cent at constant prices. The high imports of transport equipment in 1978 mean that the sector as a whole is now much better placed to serve the needs of a developing economy.

0.13. Consumption of energy rose by 6 per cent in 1978 to a level which is 35 per cent higher than in 1972. The growth in the use of oil products has been less rapid than for energy as a whole. The commissioning of the 145 MW hydro generating capacity at Gitaru in July, 1978, has helped reduce somewhat the country's dependence on imported energy but the cost of crude petroleum and refined oil products continues to impose a heavy burden on the balance of payments. In 1978 crude petroleum and product imports cost K£116 million and for 1979 the cost will be significantly higher. It is also significant to note that net cost of oil imports, i.e. after sales of products to neighbouring countries and to ships and aircraft has risen from K£1 million in 1973 to K£49 million in 1978 and will be even higher in 1979. Domestic production of energy excluding fuel-wood and charcoal accounted for only 13 per cent of total consumption in 1978. This is an improvement on the 8 per cent recorded in 1974 but reflects the need for the most urgent development of all available sources of domestic energy.

0.14. The social scene showed little change in the numbers of children attending primary school in 1978 but the enrolments in secondary schools rose from 319,982 to 362,525 with all the increase occurring in Harambee

secondary schools. Enrolments at the university also increased substantially. There was a rise in the number of hospital beds and cots related to population to an average of more than 1.6 for each 1,000 head of population but at the same time the ratios of doctors and nurses per 1,000 both fell slightly. Recent demographic enquiries appear to show a substantial rise of the birth rate in Kenya and fewer deaths so that the population growth rate may now be approaching 3.9 per cent a year. The population census to be held later this year will provide a confirmation of this trend towards an exceedingly high growth of the population. This will have a very significant impact on the resources which will have to be diverted from investment to consumption and planning for future growth in education and employment.

0.15. Numbers in paid employment rose by only 1 per cent in 1978 against the increase of 5.3 per cent recorded in 1977. It seems obvious that the economy was unable to sustain the growth momentum generated in 1977 and this had an impact on employment. Total wages and salaries paid in 1978 are estimated at K£483 million, an increase of 12 per cent on the 1977 total of K£431.4 million. The Presidential directive on employment calls for an increase in wage employment of 10 per cent in 1979. Achievement of this percentage growth in employment will help restore the total in employment to the level hoped for in the earlier development plan. There was a fall in employment in agriculture in the private sector of 17,400 in 1978 which had a particular impact on the low overall growth rate achieved. Excluding agriculture, growth in wage employment was 3.7 per cent. A quarter of a million persons have registered as job-seekers in the early months of 1979. This total excludes 1978 school-leavers. The number who will be able to find wage employment in 1979 seems unlikely to exceed 70,000.

0.16. Average wages rose by 10.9 per cent in 1978 while the average increase in consumer prices on a year to year basis was 12.5 per cent. There was thus a further fall in real average earnings in 1978 with the fall more accentuated for employees in the public sector than for those in the private sector. The rate of increase in consumer prices, however, appears to be declining.

Outlook for 1979

0.17. Balance of payments difficulties which have already caused the tightening of credit restrictions and an introduction of the import prepayment scheme seem likely to restrain growth in the domestic economy in 1979. Sales of coffee on world markets will be low in volume and at relatively poor prices. At the same time the events in Uganda will temporarily have a standstill effect on economic life of that country, leading to extreme difficulties for Kenyan merchants wishing to do business there. Possible shortage of imported supplies due to import restrictions could have a particular impact on manufacturing sector and will also adversely effect commerce. The possible further rise in crude petroleum prices due to supply shortages will aggravate the balance of payments constraints in 1979.

0.17. Output from agriculture at constant prices is expected to be higher than in 1978 while the manufacturing sector should continue to grow although at a lower rate than the rates achieved from 1977 to 1978. The construction industry should also achieve a further advance while the transport and communications sector seems likely to continue its recovery. Wholesale and retail trade, hotels and restaurants may not achieve much growth in 1979 while the service industries in the private sector will as usual be influenced by the general level of activity in the economy as a whole. Finally the level of Government activity will show some increase as a result of the Presidential directive on employment but difficulties over revenue and external receipts may act to restrain the increase in its capital spending. On balance 1979 looks like being a difficult year with a fall in the GDP growth rate from 5.7 per cent in 1978 to the overall growth rate of between 3 and 4 per cent in 1979.

CHAPTER 1—INTERNATIONAL SCENE

The overall world economic growth rate in 1978 was little changed from the 1977 levels. On an annual basis, industrial output and total GDP in 1978 grew by 4 per cent and 3.8 per cent respectively in the OECD countries. In 1978 there was some overall acceleration in growth in Europe. Further, the rate of inflation slowed down, from around 9 per cent in 1977 to 8 per cent in 1978. The most marked slowing down in price increases took place in the U.K., Italy, and Japan. Even though the rate of growth of GDP in OECD countries continues to be below past trends, unemployment was on average slightly lower in 1978 than it had been in the previous two years. However, reduction in unemployment was concentrated in the U.S.A. as change in other countries was fairly small and in some countries unemployment actually increased.

1.2. In the present exceptional circumstances it might be appropriate to discuss some of the developments in the evolving pattern of growth in OECD countries and in world GDP while not losing sight of its impact on countries such as Kenya. In June 1978 the OECD countries agreed to institute stabilization programmes and measures to revive the world economy. Despite this, 1979 is likely to see a fall in overall growth in GDP. Changes are taking place in the relationship of the larger industrial countries to each other; for example, after two years of fairly rapid increase, growth in domestic demand in the U.S.A. is declining while in certain other countries it is speeding up. Conversely, net exports from the U.S.A. are strengthening and weakening from Germany and Japan. As a result of these divergencies, significant changes in the relative cyclical positions of the countries concerned are expected to emerge in 1979. Over the year as a whole domestic growth in Japan is likely to slow down from 7.5 per cent in 1978 to 5 per cent in 1979, while in West Germany the rate of growth in 1979 is estimated to decline to 3.5 per cent, from 5 per cent in 1978, and in the U.S.A. the continuation of tight monetary conditions could reduce growth to 2 per cent in 1979. It is thus difficult to see any real increase in the rate of growth in the world GDP in 1979. Indeed it may be difficult to achieve even the moderate growth rate of 1978.

1.3. The volume of world trade rose slightly faster in 1978 than in 1977, the increase in real terms being about 5 per cent, while the terms of trade of the non.oil developing countries deteriorated. However, the deterioration in these terms of trade was cushioned to some extent by the 9 per cent depreciation of the US dollar—the currency in which oil imports are valued. Two major initiatives were taken in 1978 to manage international trade after a period of exchange rate instability. These consisted of measures to set up the European Monetary System and the active intervention by the U.S.A. to support the dollar from November, 1978 onwards. With a lower growth rate in world GDP in 1979 as seems likely the volume of world trade will probably show a lower rate of increase than the 5 per cent recorded in 1978. Reduction

in the size of the Japanese trade surplus accompanied by a fall in the U.S.A. deficit could help ease world trade from the second half of 1979 onwards but all major oil consuming countries are having to adjust to the price rises already made in 1979 and this will have its own impact on the growth of the volume of world trade.

1.4. The UNCTAD index of commodity export prices of primary producers is given in Table 1.1. After a generally weak first half year, prices of all major groups of commodities rose markedly in the last quarter of 1978. These price rises it seems were induced by purchases for stockbuilding, faster growth in consumption of industrial materials, and the effect of supply difficulties on particular products.

1.5. Prices of tropical beverages fluctuated round a much lower level in 1978 compared to 1977. If cocoa is excluded the reduction in prices would have been more accentuated. Concern in the coffee market over the effects of frost in Brazil subsided in the second half of the year. After their fall in 1978 average prices for coffee in 1979 are likely to be slightly lower than in 1978. Tea prices were fairly stable in 1978, but were below the high levels reached by mid.1977. Tea prices are likely to remain stable in 1979 at these lower levels. There are, however, special considerations which could result in commodity prices at least for some selected products being higher in 1979 than in 1978. These depend on the overall impact of the new higher oil prices on demand for other commodities. Also inflation in industrialized countries seems likely to be higher in 1979 and this will have its own impact on the prices of finished products imported into the developing countries. On balance, as a result, the terms of trade of the non-oil developing countries may deteriorate further in 1979.

1.6. The freeze on prices of crude petroleum which had been effective since January, 1977 ended in January, 1979, when OPEC countries raised the price of the benchmark crude by 5 per cent to US\$13.3 per barrel. As agreed at a meeting of OPEC Ministers held in December 1978, the scheduled increases to take effect in 1979 were as follows: January 5 per cent; April 3.8 per cent; July 2.29 per cent and October 2.69 per cent leading to a price of US\$14.54 per barrel. However, the political troubles in Iran had by early 1979 caused severe supply shortages. Subsequent developments led OPEC countries to raise the price of benchmark crude to US\$14.54 per barrel in April 1979, a price that had originally been expected in October 1979. Further, the majority of OPEC countries will or have already imposed premium surcharges on the basic price, ranging from US\$1 to US\$4 per barrel. In addition several of the exporting countries have imposed policies of oil conservation, thereby causing supply constraints. On the demand side more and more countries are beginning to accept the inevitability of having to reduce consumption in order to save precious foreign exchange. The recent move in the U.S.A. to equalize import and domestic prices should have an impact in reducing the demand in that country.

PRICE INDICES OF PRIMARY PRODUCERS' COMMODITY EXPORTS

1975 = 100

Table 1.1

	FOOD PRODUCTS				XXXXXXXXXXXX	XXXX	XXXXXXXX
	Cereals and Sugar	Tropical Beverages	Vegetable Oils	Total	Industrial	XXXX	Commercial
1976	69	180	98	107	119	98	107
1977	56	323	126	147	127	104	134

1979—							
January	63	218	165	123	155	123	129

1.7. The dialogue on the New International Economic Order which was launched in 1974 has not yet yielded worthwhile results in context of the fund the developing nations are seeking to be set up, to facilitate trade in primary commodities, although some progress has been made in establishing individual commodity agreements. The reform of the international monetary system is also proceeding only slowly and unless the present trend towards protectionism is reversed, the world could risk slipping into a situation in which non-inflationary growth becomes more difficult to achieve.

1.8. Despite this trend to protectionism designed to prevent further declines in long-established industries, some progress has been achieved in external trade negotiations under the auspices of GATT. After six years of negotiations about forty countries have concluded a new trade pact in April 1979. This calls for significant reductions in customs tariffs by up to 35 per cent over the next seven years. These should lower the cost of imports, reduce barriers to export markets and generally facilitate global trade.

1.9. The scheduled and unscheduled increases in price of crude petroleum, the coming into effect of the European Monetary System, some greater stability in exchange rates with a strengthening of both the US dollar and the pound sterling, higher inflation leading to steps to control growth in money supply, and little growth in prices of primary commodities excluding petroleum, are the major events that have occurred on the world economic scene. The overall impact of all these events will probably make it more difficult for non-oil developing countries to achieve the growth rates that they achieved in 1976 to 1978. However, a continuation of the growth in the flow of funds to developing countries which has been a feature of the economic scene particularly since 1974 should enable higher growth rates to be achieved than would otherwise have been the case.

CHAPTER 2—THE DOMESTIC ECONOMY

The boom year of 1977 has been followed by a decline in the growth rate of the economy in 1978. Revised figures show that there was a rise of 8.6 per cent in GDP at constant prices in 1977, while in 1978 the growth rate slowed down to 5.7 per cent. At current prices total GDP rose by 29.7 per cent in 1977 but this rate dropped to 10.4 per cent in 1978, less than the average increase of 12.5 per cent in consumer prices. When allowance is made for a deterioration in the country's terms of trade of 14 per cent, the real increase in the GDP in 1978 is reduced substantially below the growth rate of 5.7 per cent recorded at constant prices. It is probable that real GDP per head was unchanged or slightly reduced between 1977 and 1978.

2.2. The level of gross fixed capital formation has risen rapidly in the last two years as a result of the acceleration in investment in both private and public sectors of the economy. Gross capital formation increased at current prices by 34 per cent in 1977 and 30 per cent in 1978. These increases will help provide the capital base required for the planned substantial growth of output in the economy in the future.

2.3. After the exceptional surplus in balance of payments in 1977 there was a swing round in 1978 to a deficit which when measured in terms of the fall in the country's foreign reserves amounted to K£75 million in 1978 despite the much higher level of net inflow of capital. The total expenditure on fixed capital formation at current prices by the public sector rose from K£165 million in 1977 to K£207.4 million in 1978 accounting for a substantial part of the rise in fixed capital formation as a whole. The private sector's share of a capital formation was 59.2 per cent of the total in 1978.

2.4. The contribution of agriculture to GDP fell by 4.2 per cent at current prices in 1978 but there were some substantial advances recorded by the other major sectors. However, given that agriculture accounted for more than one third of the total GDP at current prices in 1978, the fall in its contribution had a particular impact on the total. The level of manufacturing sector's contribution to GDP rose by 23.3 per cent at current prices, that of transport and communications sector by 25.9 per cent and of construction sector by 17.4 per cent. Producers of Government services also recorded an increase of 19.8 per cent. At constant prices there was a small rise of 1.4 per cent in the contribution of agriculture to GDP as compared to the more substantial rise of 5.5 per cent in the case of transport and communications sector; 6.4 per cent in the case of construction sector; and a high 14.4 per cent in the case of manufacturing sector.

2.5. Agriculture almost doubled its contribution to GDP at current prices between 1975 and 1977. The decline in 1978 is a cumulative effect of the drop in world prices of coffee and tea and of the weather which has adversely affected production of some crops. The fall in sales of agricultural products

to marketing boards in 1978 was 21.1 per cent but when account is taken both of the sales via other marketing channels and of the value of production for own consumption for a rapidly increasing population, the decline in value added for GDP at current prices is reduced to 4.2 per cent. Also the relative improvement in the agriculture sector's terms of trade with the rest of the economy in 1977 was followed by a fall in 1978 so that on the overall level agriculture sector's terms of trade was virtually the same in 1978 as in 1976.

2.6. This experience of a relative improvement in 1977 in farmers real incomes followed by a decline in 1978 was not repeated for wage earners in the economy. As shown in Chapter 5 real earnings of those in wage employment fell by 4.3 per cent in 1977 and a further 1.4 per cent in 1978.

2.7. Per capita GDP which was estimated at K£93.6 at current prices in 1976 rose to K£117.2 in 1977 and further to K£125 in 1978. Per capita GDP figures at 1972 prices are 1976 K£57.5; 1977 K£60.2; and 1978 K£61.5 as compared with K£56 in 1972. This is equivalent to a rise of 9.8 per cent over this 6-year period between 1972 and 1978 at an annual average rate of 1.5 per cent.

2.8. As already indicated fixed capital formation again increased substantially in 1978 and the rise at constant prices was 21.5 per cent. The proportion of GDP at current prices being expended on fixed capital formation has risen from 19.8 per cent in 1976 to 20.5 per cent in 1977 and to 23.9 per cent in 1978. There were also increases in stocks over the same period so that in 1978 the total investment, including increases in stocks, of K£597.3 million accounted for 28.1 per cent of GDP at market prices. The volume of investment in transport equipment rose by 28 per cent and in machinery and other equipment the increase was 47 per cent.

2.9. Although the total contribution of agriculture to GDP at current prices fell in 1978 it still accounted for a high proportion of 34.5 per cent of the GDP. Table 2.1 details a breakdown of GDP at both current and constant prices for the years 1975 to 1978 and the percentage rates of growth are noted in Table 2.2. In 1977 agriculture's share of GDP had risen to 39.7 per cent when measured at current prices and 30.9 per cent at constant 1972 prices. Its contribution at constant prices declined to 29.7 per cent in 1978.

2.10. Output of manufacturing sector has increased strongly in the last three years and its share of GDP in 1978 has grown to 13.2 per cent at current prices and 16.2 per cent at constant prices. Output of other productive sectors, electricity and water and building and construction has also advanced fairly rapidly in the last two years but the two sectors combined only produced 4.8 per cent of GDP at current prices in 1978. The increases in all the service sectors were fairly substantial in 1978 measured at constant prices. Value added by the distribution sector and hotels and restaurants rose by 7.2 per cent; transport and communications sector by 5.5 per cent; finance, insurance, and real estate sector by 7.6 per cent; and of other services by 6.6

2.11. Production in the traditional sector of the economy was valued at K£96.25 million in 1978 or just over 5 per cent of the total GDP. At constant 1972 prices the proportion was only 4.4 per cent.

2.12. Parastatal bodies account for a significant proportion of the GDP of manufacturing, electricity and water, transport and communications and finance and other business services sectors. Also the Central Government and

local authorities made their contribution to GDP through the employees engaged in the field of public administration, defence and social services except for teachers who are mostly employees of a parastatal body.

Resources Allocation

2.13. The export surplus of the years 1976 and 1977 reverted to the more typical import surplus in 1978, at a record high level of K£220.6 million equal to 10.4 per cent of the GDP at market prices. This substantial addition to the domestically produced resources enabled a particularly high level of capital formation to be achieved despite a large rise in stocks and an increase in consumption of 25.7 per cent at current prices, well in excess of the rise in consumer prices. This increase in consumption is a result of the lagged effect of the coffee and tea boom in 1977. The distribution of resources and their uses is shown in Table 2.5. The share of consumption at current prices has risen from 73.2 per cent of total GDP in 1977 to 82.3 per cent in 1978.

39.4 per cent in 1975 to 34.9 per cent in 1978, while that of operating surplus has risen from 47.3 per cent to 50.8 per cent over the same period. The share of operating surplus had been even higher in 1977 on account of the high level of receipts of the agriculture sector. The level of indirect taxes has risen from 13.3 per cent of factor incomes in 1975 to 14.4 per cent in 1978.

2.15. Table 2.7 sets out information on the financing of gross capital formation. While in 1977 domestic saving was equal to the total value of fixed capital formation and increases in stocks, net borrowing and grants from the rest of the world accounted for 46.9 per cent of gross capital formation in 1978, the remaining 53.1 per cent being covered by domestic saving.

2.16. Details on capital formation by type of asset are shown in Table 2.8. The private sector's share in capital formation at current prices has risen from 57.7 per cent in 1977 to 59.2 per cent in 1978, while that of public sector has declined from 42.3 per cent to 40.8 per cent over this period. In terms of asset breakdown machinery and equipment accounted for 41.6 per cent of fixed capital formation in 1978, followed by buildings—20.8 per cent, transport equipment—19.9 per cent and other construction and works—16.2 per cent. The relative shares in 1977 were 37.7 per cent and 17.6 per cent on machinery and transport equipment respectively, 23.3 per cent on buildings and 19.7 per cent on other construction works. The proportion of investment on transport equipment in 1977 and 1978 was very much higher than the comparable figures of 13.8 and 13.9 per cent for 1975 and 1976 and is accounted for by the heavy expenditure that has been incurred by the replacement of equipment for railways and road transport, as well as by the purchase of aircraft by Kenya Airways Corporation.

2.17. Accordingly as shown in Table 2.9, over 21 per cent of total capital formation in 1978 has been incurred by the transport and communications sector, followed by manufacturing sector with a share of 16.9 per cent, electricity and water 10 per cent and agriculture 9.8 per cent. When measured in constant prices the volume of fixed capital formation rose by a quarter in transport and communications sector, by a third in manufacturing sector, and by two fifths in electricity and water sector in 1978.

CHAPTER 3—THE DEMOGRAPHIC SCENE

The present demographic scene in developing countries is characterized by high birth rates of over 45 per thousand and death rates of about 19 per thousand leading to high rates of natural increase. While the global crude rate of natural increase is 1.8 per cent per annum that for Africa is 2.6 per cent, with the population in Kenya, on the basis of data now becoming available, growing at a rate of 3.9 per cent per annum. This rate for Kenya is one of the highest in the world.

3.2. Demographic trends have relevance to socio-economic development. The effect of population dynamics on the size of population among which a given income has to be shared, on saving rates and on the composition of investment have been shown to have significant consequences on economic growth and on per capita incomes. Per capita income is not only affected by population size but more so by its rate of growth and age distribution. A higher rate of population growth implies a higher level of investment required to achieve a given increase in per capita income in the future. Countries such as Kenya with very high rates of population growth and a large population aged under 15 years need to divert more resources to consumption leaving less available for savings and investment. At the same time economic development has its own impact on fertility and mortality through the improvement of education and health services and on migration through the results of investment by creating regions with different levels of development.

3.3. In a country with a high population growth rate the increase in the the population aged under 15 is relatively large compared to the population aged 15 years and over. In such circumstances an improvement in the quality of education or an increase in school enrolment, an essential part of development objectives, will impose an increasing burden on the relatively small economically active population.

3.4. On finishing at school the child normally wishes to join the labour force and become economically active. The size of the labour force thus is a function of population size, its profile and its sex structure. It is also a function of age and sex specific occupational activity rates and the influence of social conventions although the latter may change with job availability. A high rate of population growth implies that development must create jobs at an adequate rate for the growing numbers wishing to join the labour force. The size of the population which needs to be catered for has thus to be reliably estimated and policy and planning measures taken accordingly.

3.5. Although Kenya's interest in family planning is not a recent phenomenon it was not until after the analysis of the 1962 census data that the need for a conscious population policy was acknowledged by the Government.

In 1974 a five year Family Planning Programme was established with the support of the World Bank aimed at reducing the then estimated rate of population growth from 3.3 per cent per annum to 3 per cent per annum during the programme period. Improvement of rural health and family welfare was also part of the objectives of the programme. Any new programme which may succeed the previous one will have to be more effective if the current development plan goal "to significantly reduce the current birth rate in order to have an impact on the rate of population growth" is to be achieved.

Demographic Changes and Fertility

3.6. The total fertility rate—defined as the number of children born by a mother by the end of her reproductive period, was estimated at 6.8 children per woman in 1962. This rate had risen to 7.6 by 1969 and it is now estimated to have further increased to 8.1 in 1977 indicating that fertility has been increasing by about 0.8 per cent per annum. A decline in the incidence of childlessness as a result of the improvement of health conditions and a greater awareness of the benefits of simple hygiene is one

AGE SPECIFIC FERTILITY RATES, 1977

Table 3.1

<i>Age Group</i>	<i>Annual births per female in each age group</i>	<i>Births per female in period of age group</i>

45-49	0.0139	0.0695
Overall Fertility		8.0954

of the reasons for the increase in fertility. Using data from various demographic surveys it has been possible to construct a cross-sectional fertility distribution for women over 12 years of age. The results of this analysis set out in Table 3.1 show that the total fertility rate was 8.1 children per woman in 1977. The main reproductive period is between the ages of 15 and 39 with a particular concentration in age range 20 to 34 year.

3.7. A further reflection of the rising trend in fertility is indicated by the population's age distribution. Persistent high levels of fertility result in a population with a broad-based age distribution that tapers rapidly with age particularly in situations where infant mortality is high. On the other hand persistently low levels of fertility yield a population with a

narrow-based age distribution. Rates of mortality decline progressively with age. Mortality "changes that usually occur, therefore have a particular impact on the age distribution of the young. Beyond the age of 15, the age distribution is much less effected by such changes in mortality. Thus a change in the growth rate caused by a change in fertility will generally have associated with it a large change in the age profile. In the case of Kenya, sharply rising fertility during the period 1962 to 1977 has resulted in an increase in the proportion of the total population which is under 15

PROPORTION OF POPULATION UNDER 15 YEARS, 1962, 1969, 1980 AND 1990

Table 3.2

Percentage

Age Group	1962 Census	1969 Census	REVISED PROJECTIONS	
			1980	1990
0.4	17.1	19.4	20.3	21.6
5.9	15.7	16.3	15.6	17.2
10.14	12.7	12.5	12.8	12.8
0.14	46.1	48.2	48.7	51.6

years of age and it will not be long before 50 per cent of Kenyas population will be under this age. As shown in Table 3.2 Kenya's population is becoming progressively younger. This has major implications on planning for the provision of basic needs for such a population.

3.8. Evidence from various demographic surveys shows that women with a few years of primary education are reporting higher total fertility rates than those with no education. However, the number of births to women with secondary education tends to be substantially lower. Thus exposure to primary education makes it possible for a woman to be more conscious

PERCENTAGE DISTRIBUTION OF WOMEN BY LEVEL OF EDUCATION, 1977

Table 3.3

Age Group	Total	No Schooling	Primary Education	Secondary Education	University
15.19	100	24.5	64.9	10.6	
20.24	100	40.2	44.6	15.1	0.1
25.29	100	53.7	39.4	6.7	0.2

40.44	100	83.7	14.9	1.3	0.1
45.49	100	89.0	9.6	1.3	0.1

of hygiene and better nutrition and this helps prevent pregnancy wastage while exposure to secondary education appears to be a prerequisite for a change in attitude towards family size. Table 3.3 illustrates the situation regarding education levels for women in 1977. It seems likely that for the

foreseable future the influence of primary education on increasing fertility will far outweigh any tendency to reduce the family size unless a significantly larger proportion of women can be given access to further education after primary school age, than is the case at the moment. Universal primary education for females will be an established fact within a few years, and if the current relationship between primary education and fertility prevails total fertility may rise even further from the present very high level.

3.9. As shown in Table 3.4 there are considerable differences in fertility rates between the urban and rural sectors and between different provinces. The total fertility rate reported by urban women is consistently lower than the rate for women in rural areas. Western Province has the highest fertility rate and Eastern Province the lowest. These differentials in fertility may

45-49	5.77	6.48	6.92	6.65		4.40	6.15

be attributed to variations in attitudes to fertility and to the impact of socio-economic development. The average for the country as a whole, is heavily weighted by the development in the rural areas where 85 per cent of the total population live. Although it is difficult to be specific, there probably have been greater relative improvements in health, education and other social services in these areas in the recent period, and these have had an impact on the average total fertility in the country as a whole.

Mortality

3.10. Evidence from the 1962 and 1969 censuses and from the 1977 Baseline Demographic Survey indicates that the mortality rate has been falling since 1962. The decline in mortality has been most significant for

PROPORTION OF CHILDREN DYING BY AGE OF MOTHER, 1962, 1969 AND 1977

Table 3.5

Age Group	1962	1969	1977	1977 as Percentage of 1962
15-19	0.146	0.128	0.113	77
20-24	1.170	0.147	0.109	64
25-29	0.205	0.174	0.125	71
30-34	0.238	0.202	0.158	66
35-39	0.269	0.231	0.177	66
40-44	0.308	0.263	0.209	68
45-49	0.338	0.304	0.247	73

infants, i.e. children of age one and under. Table 3.5 sets out the proportions of children who have died in the years 1962, 1969 and 1977 analysed by the age group of the mother. The decline in child mortality, i.e. of population under 15 years of age is a consistent one between 1962 and 1977, pertaining to mothers in all the listed age groups.

3.11. Infant mortality which was estimated at 119 per 1,000 in 1969 had declined to 83 by 1977. Adult mortality has also fallen though the improvement in the case of adults has been less spectacular. As a result, and as per the life tables derived from mortality rates in 1962, 1969 and 1977 the expectation of further years of life at age 15 has risen respectively for males and females from 46.7 and 49.7 years in 1969 to 47.7 and 51.1 years in 1977. More significantly the expectation of life at birth for males and females, has increased from 46.9 and 51.2 years in 1969 to 51.2 and 55.7 years in 1977.

3.12. Analysis of the proportion of children surviving by province indicates that the Central, Rift Valley and Nairobi provinces reported the lowest child mortality while Nyanza and Western provinces reported the highest. The data also reveal rural/urban differences with the rural areas reporting a higher level of mortality than the urban areas.

Population Growth

3.13. Fertility rates noted above when multiplied by the number of women in each age group result in a crude birth rate of 53.4 births per 1,000 population. Similarly the age specific mortality rates when multiplied by the graduated age distribution result in a crude death rate of 14.2 deaths per thousand population. The crude birth and death rates of 53.4 and 14.2 yield a rate of natural increase of 39.2 per thousand or 3.92 per cent per

annum. With no migration of any significance into or out of Kenya the rate of natural increase of 3.92 per cent per annum does represent the overall rate of population growth. This rate which would double the population in 18 years is the highest rate of population growth in Africa and has increased from the rates of 3.0 and 3.3 per cent per annum estimated for 1962 and 1969 respectively.

3.14. Population projections being used hitherto were computed on basis of a total fertility rate of 7.6 derived from the 1969 census data. These projections have now been revised reflecting a gradual rise in the total fertility rate to 8.1 by 1980 and a continuation of fertility at that level to 1990. The assumption on declining mortality in the revised projections

parallels the decline assumed in the current projections. The revised and current projections are set out in Table 3.6. As shown the total population as projected for 1990 is over one million higher than the total population as projected earlier.

3.15. In general, both increasing fertility and declining mortality rates raise the proportion of children in a society. Increased fertility boosts the child population because of the increase in the number of births each year while declining mortality increases the child population since the most significant declines in mortality occur in the infant and early childhood years. Therefore, though the revised projections have little effect on the adult population in the short term, the number of children in the population rises each year, by both an increase in the number of babies born and an increase in the number of these babies that survive. Thus the increase in population in 1980 as a result of the revision occurs primarily in the number under 5, and by 1990 the impact will affect numbers under 15. The consequences of these revised projections have far-reaching implications for social and economic development.

3.16. The estimate of population under 5 based on the revised projections of 3,231,000 in 1980 is 82,800 or 2.6 per cent higher than that of the previous projections. By 1990 the numbers under 5 using the revised projections will rise to 5,196,900, a figure 11.9 per cent higher than currently estimated and 60.8 per cent more than in 1980. The very large rise in the number of young children will call for a rise in the medical and nutritional services for this age group.

3.17. Revised assumptions on fertility have a similar bearing on the estimates on proportion of population under 15 years of age. As per current projections it was estimated that 48.4 per cent and 49.4 per cent of the population would be under 15 years of age in 1980, and 1990, respectively. In the revised projections, however, the proportion of total population aged under 15 rises from 48.7 per cent in 1980 to 51.6 per cent in 1990. The estimate of the population between 5 and 14 years, i.e. an approximation to the main school-going age group in the revised projections rises from 4,508,900 children in 1980 to 7,191,200 children in 1990; the estimate for 1990 is 514,600 or 7.7 per cent more than the current projections. Increases in the estimates of the school age population have an important bearing on the provision that will need to be made to cater for the increase in educational infrastructure required to accommodate this population. In the longer term these children will have to secure job training and will need to be able to find jobs. The pressure on the job market in the 1990s therefore will be greater. It could also further intensify rural to urban migration with resultant worsening in living conditions in urban areas unless additional measures are taken to accommodate this flow.

3.18. As revised projections result in an increase in the current estimate on population under 15, whilst leaving the adult population unchanged in the short term, there is a resulting change in the dependency ratio. The dependency ratio, i.e. population aged 0 to 14 years and aged 60 and over as a proportion of population aged 15 to 59 years was estimated at 109 and 112 in the current projections for 1980 and 1990, but as per revised projections it rises from 110 in 1980 to 122 in 1990. The revised projection will have a significant effect on the social and economic planning measures. The revised projections indicate that the same number of adults will have to provide for the needs of a much greater population of children than hitherto anticipated. More demands will be placed on mothers who on the average will be caring for more children spaced closer together, and will need greater assistance if

their children are not to suffer educationally, socially and in terms of their physical well-being. Table 3.7 details data on certain aggregates discussed above which will be effected by the revised projections.

3.19. Evidence presented above is consistent with the idea that in the years ahead, fertility in Kenya will continue at very high levels whereas mortality will continue to decline. In this regard, the demographic trends in Kenya parallel those in many other countries at similar stages of development. One important difference, however, between Kenya and most other developing societies lies in the fact that the combination of the current high level of fertility with rapidly declining mortality is virtually unprecedented in demographic history. At this rate Kenya's population could reach 30 million by about 1995 and 60 million by the year 2012. The capital resources of Kenya will, over the remaining years of this century be strained as the country attempts to develop as rapidly as possible against this background of rapid population growth. Decisions in the years ahead will need to be made on the allocation of limited financial resources between the consumption needs

of the population and on the investment to cater for such a growing population. The growth target of 3 per cent a year increase in per capita incomes will require an annual GDP growth rate of 7 per cent. Such a growth rate means that about 24 per cent of available resources need to be devoted to investment, while pressure on these resources for increased consumption will make it difficult to obtain domestic funds for investment.

CHAPTER 4—MONEY AND BANKING AND BALANCE OF PAYMENTS

The year 1978 was marked by instability in world exchange markets while the pressure on Kenya's balance of payments following the changes in the international coffee market led to an imposition of restrictions on domestic credit and the introduction of an import prepayment scheme. There was evidence of a reduction of domestic inflationary pressures as the year progressed and the rise in money supply was small compared with the large increase in 1977.

4.2. The US dollar had till recently acted as the reserve currency of most countries, and financed much of world trade outside the Communist block. Trade deficits incurred by the U.S.A. in 1977 and 1978 and the inflation differentials recorded against its major trading partners undermined the confidence in the dollar, precipitating a period of foreign exchange instability. Very many countries were affected as the value of their foreign reserves was reduced by the decline in the value of the US dollar. The formation of the European Monetary System was an attempt to create a zone of monetary stability among members of the European Economic Community in the hope that it would lead to a convergence of financial and economic policies in the participating countries. The European Currency Unit was to act as the unit of account to aid the operation of this system. The European Monetary System itself did not come into being until February 1979 and currently excludes the U.K.

4.3. The Second Amendment to the IMF's Articles of Agreement came into force on 1st April 1978. Under the new rules member countries have a relatively wide choice with regard to foreign exchange arrangements. Members can adopt freely floating exchange rates without margins or can peg their currencies to any major currency or group of currencies. SDR quotas were raised following the acceptance of the Second Amendment. Kenya received her increased allocation of SDR'S in January 1979.

4.4. The main monetary aggregate, in the domestic scene are detailed here below:—

	<i>Foreign Assets K£m.</i>	<i>Domestic Private* K£m.</i>	<i>Credit Government K£m.</i>	<i>Money Supply K£m.</i>	<i>Liquidity Ratio per cent</i>	<i>Advances/ Deposits Ratio per cent</i>
1976 Dec. ..	114	280	88	423	24.0	74.3
1977 Dec. ..	210	373	81	621	28.4	68.8
1978 Mar. ..	203	423	82	658	26.2	71.3
June	178	466	69	652	21.9	78.9
Sept. ..	152	466	107	664	22.6	77.1
Dec. ..	135	468	145	706	22.7	76.5

*Includes parastatal bodies.

4.5. The increase in the value of imports and fall in prices of coffee and tea exports led to a rapid rundown of the country's foreign reserves in 1978. This had an impact on the liquid assets of the commercial banks. Their

liquidity ratio which had risen to 28.4 per cent at the end of December 1977 dropped to 22.7 per cent by the end of December 1978. Their advances/deposits ratio rose from 68.8 per cent to 76.5 per cent during the same period. This reflects the prevalence of liquidity squeeze in 1978. Nevertheless domestic credit rose by 35 per cent over the year as a whole and money supply over the same period rose by 13.7 per cent. Here the influence of the fall in foreign assets over the year was particularly strong, acting as a counter-weight to the increase in domestic credit. Between June and December 1978 there was little increase in private sector credit but claims on the Government rose from K£69 million to K£145 million. The rise in discount rate on Treasury bills from 1.52 per cent to 6.80 per cent, and the decline in the rate of inflation are a consequence of the tight monetary situation that prevailed in the later part of the year.

Foreign Exchange Rates

4.6. The external value of the Kenya shilling dropped by a further 6 percentage points in 1978 compared to a drop of 5 per cent in 1977. This was mainly due to large appreciations in the value of Deutsche mark, Swiss franc and Japanese yen which were only partially offset by depreciations in the values of the Italian lira, and the US, Canadian and Australian dollar. Instability of foreign exchange rates characterized the foreign exchange market for the whole of 1978. However extreme fluctuations in the value of the domestic currency vis-a-vis the major world currencies were averted by its being pegged to the SDR. The value of the shilling had declined by nearly 25 per cent between December 1973 and December 1978, adversely affecting Kenya's external debt obligations and the domestic prices paid for imported goods. Table 4.1 shows the changes in value of the Kenya shilling since 1973.

Interest Rates

4.7. Interest rates with the exception of Central Bank discount rates have remained unchanged since 1975. The minimum rate charged by commercial banks on loans and advances for periods less than three years was abandoned in 1976, but the maximum rate still stands at 10 per cent. However, the Central Bank discount rate on Treasury bills increased from 1.52 per cent in December 1977 to 6.80 per cent in December 1978, while comparative discount rates for other eligible paper increased from range 6 to 6.5 to range 7 to 7.5 per cent. Rates charged by various financial institutions are detailed in Table 4.2.

Foreign Exchange Reserves

4.8. The rapid build-up of the country's foreign reserves in 1977 occasioned by the exceptionally high coffee and tea prices was completely reversed in 1978. Foreign reserves of the central monetary authorities declined by K£75.3 million in 1978, compared to an increase of K£94.6 million in the year before. Most of the decline took place between May and November 1978. With the Second Amendment to the IMF's Articles of Agreement becoming operational on 1st April 1978 Kenya's quota rose from SDRs. 48 million to SDRs. 69 million. In August 1978 Kenya repaid to the IMF the equivalent of SDRs. 2.4 million provided under the Fund's extended financing facility but in December 1978 an equivalent of SDRs. 6.7 million was purchased under the reserve tranche. This raised the IMF's holding of Kenya currency to K£58.6 million or 175.6 per cent of her quota, and by January 1979 this figure had risen further to K£66.2 million following drawings under the first credit tranche. Table 4.3 sets out the details of changes in the foreign assets and liabilities of the central monetary authorities. By the end of February 1979 net foreign reserves of the central monetary authorities stood at K£139.4 million, little changed from the level of K£141.9 million as at the end of October 1978.

Money Supply

4.9. The supply of money as shown in Table 4.4 increased from K£620.7 million at the end of December 1977 to K£705.9 million at the end of Decem-

ber 1978. an increase of 13.7 per cent compared to a rise of 46.8 per cent in 1977. The respective increases in demand, time and savings deposits and in currency in circulation for 1978 were 7.7, 30.3, 13.9 and 9.0 per cent compared to 43.1, 63.3, 36.1 and 32.4 per cent respectively in 1977. As shown in Table 4.5 domestic credit, however, increased significantly by 35.2 per

cent in 1978 compared to a rise of 23.5 per cent in 1977. Credit to the Government increased by 79.9 per cent from K£80.9 million at the end of December 1977 to K£145.5 million at the end of December 1978 while in 1977 there had been a fall in Government borrowing of K£7.2 million. Credit to the private sector including parastatal bodies increased by 25.3 per cent from K£373.1 million to K£467.8 million between December 1977 and December 1978. However, it is significant to note that in the second half of 1978, while credit to the private sector rose by only K£16.3 million and to the parastatals it fell by K£15.9 million in line with the credit squeeze in operation, domestic credit to the Central Government increased by K£76.7 million in this six month period. The increase in money supply in the first half of 1978 was partly due to the lagged effects of the 1977 economic boom but in the second half of the year it was almost entirely due to credit extended to the Government.

4.10. In the early part of 1978, monetary policy was geared to reducing the growth in money supply and domestic credit. However, as the year progressed the economic forces that had generated the boom conditions in 1977, were completely reversed necessitating a relaxation of some of the monetary policies introduced at the beginning of the year. Effective from 1st January 1978, commercial banks had been subjected to a minimum liquidity ratio of 20 per cent. In May 1978, a further cash ratio of 4 per cent was imposed on commercial banks as their liquidity ratio was still above 20 per cent.

4.11. While these measures had sterilized the liquid reserves of the commercial banks substantially, the fall in net foreign assets of the monetary authorities helped reduce the impact of the large increase in domestic credit on money supply. The cost of borrowing rose and the discount rate on Treasury bills increased sharply to 6.8 per cent in December 1978. The minimum liquidity ratio was lowered from 20 to 18 per cent, in July to ease the liquidity squeeze that had emerged and maintain some growth in money supply. But banks were requested to maintain a cash ratio of 3 per cent and to restrict growth in credit to the private sector to 1.5 per cent per month from 1st July 1978.

4.12. The effects of the tighter money situation on the economy during 1978 are also reflected in the domestic prices. The increases in consumer prices in Nairobi for 1978, were somewhat lower than in 1977. The increases in price in 1978 were 13.7, 8.1 and 8.3 per cent for lower, middle and upper income groups compared to increases of 21.0, 13.5 and 14.5 per cent respectively in 1977. Indeed the rise between October 1978 and March 1979 was down to 1.9, 1.5, and 3.2 per cent for the lower, middle, and upper income groups.

Liquidity Ratio

4.13. Table 4.6 shows the changes in the liquidity ratio of the commercial banks over the last few years. The high coffee and tea prices in 1977 resulted in a large rise in the liquid assets of the commercial banks to a peak level of K£186 million and a liquidity ratio of 37 per cent in August of that year. The fall in realizations from coffee and tea had its own impact on these liquid assets. The legal minimum liquidity ratio which earlier had been raised from 18 to 20 per cent, was again lowered to 18 per cent in July, 1978 to relieve the banks of the liquidity squeeze that had emerged.

4.14. As indicated in Table 4.7 the deposits of commercial banks with the Central Bank fell by K£9.8 million compared to the large increase of K£29.8 million in 1977. The increase of K£4.3 million in the first quarter of 1978 proved to be the exception and there were falls in the subsequent periods. There was a large rise in Government borrowing from the Central Bank in 1978 as contrasted to the very substantial increase in its deposits in 1977. However, there was an almost comparable fall in foreign exchange reserves whereas in 1977 there had been a large rise.

**On 1st July 1978 the prescribed minimum was fixed at 18%.

+Deposits and Liquid Assets are calculated as an average of three days' balances.

Commercial Banks, Bills, Loans and Advances

4.15. Table 4.8 sets out details on loans and advances of commercial banks and their holdings of Treasury and commercial bills. Their holdings of Treasury bills fell from K£68.5 million in December 1977 to K£62.6 million in December 1978. Despite the tight control on liquidity in the second half of 1978 credit to private enterprises including private households increased by 30.2 per cent over the year as a whole though this was lower than the rise of 37 per cent in 1977. Commerce, manufacturing, services and agricultural sectors were the main recipients of this credit. The commercial sector registered an increase of K£21.8 million in its borrowing in 1978 of which 61.2 per cent was used to finance imports and 34.5 per cent domestic trade. The manufacturing sector received increased credit facilities of K£31.1 million which is an increase of 50.7 per cent over the previous year. Although credit to the agriculture sector rose by a third from K£54.4 million to K£72.5 million, the total in 1978 amounted to only 14 per cent of total deposit liabilities and is below the target set out in the official pronouncement of 17 per cent. Credit to other sectors increased by varying amounts, except to financial institutions where there was a fall of 19.8 per cent from K£20.9 million to K£16.8 million.

Stock Market

4.16. The index of share prices on the Nairobi Stock Exchange reached its peak at 441.79 in August, 1978, although the level of activity in 1978 was much lower than in 1977. In 1977 the index had risen by 173 points compared to the rise of only 30 points in 1978 from 390.55 at the end of Decem. bre 1977 to 420.65 at the end of December 1978. There was a gradual decline in the index from August 1978 to January 1979, which was followed by a drop of 59.47 points In February 1979, to a level of 332.97. The decline reflects the monetary situation in the economy as well as general decline in the profitability especially of agricultural companies. The index recovered to some extent subsequently and reached 349.92 by mid-April 1979.

Balance of Payments

4.17. After the record surplus of K£1 12.7 million in 1977 due essentially to the very high prices on offer for coffee, the balance of payments registered a record deficit of K£77.6 million in 1978. This complete turn around in the balance of payments is accounted for by the fact that the high export earnings in 1977 were followed by a year in which while the sums earned from 1977 exports were being spent on a much higher level of imports there was a sharp fall in the level of exports. The central monetary authorities introduced measures to reduce the resultant outflow of funds and import licence approvals were suspended between October and December 1978. In December 1978, a premium levy was imposed on foreign travel, while applications for foreign exchange for imports were required to be accompanied by a cash deposit which in some cases amounted to 100 per cent of the c.i.f. value though some essential items continued to be let in with nil or low deposits. Further, commercial banks were requested to withhold credit if this were to be used for paying import deposits and a general restriction was also imposed on private credit. Although these measures were generally successful the decline in foreign reserves over the year as a whole amounted to K£74.6 million.

4.18. As shown in Table 4.9 payments to the rest of the world on merchandise account increased by 35.2 per cent from K£535.1 million in 1977 to K£723.3 million in 1978, while receipts declined by 22.2 per cent from K£470.9 million to K£366.5 million. As a result the trade deficit increased from K£64.2 million in 1977 to K£356.8 million in 1978, far surpassing the size of the deficit that resulted from the oil crisis in 1974. A substantial proportion of imports in 1978 consisted of machinery and transport equipment and defence equipment. The poor performance of exports in 1978 was due largely to decline in the prices of coffee and tea, and despite the emphasis in policy on the need to increase exports of manufactured products, no appreciable increases were registered in their exports during the year.

4.19. Net earnings on invisible transactions increased by K£16.0 million from K£88.3 million in 1977 to K£104.3 million in 1978. Transportation, travel and haulage of freight across Kenya, in that order, are the main sources of invisible receipts. Net receipts on transportation account amounted to K£57.1 million in 1978 while the respective amounts for foreign travel and freight shipments were K£48.5 million and K£26.6 million. The increase in transportation receipts in 1978 is attributed to wider operations of Kenya Airways, while the decline in cargo transported across Kenya as a result of border closure with Tanzania, and a decline in foreign trade of Uganda, adversely affected the earnings of Kenya Railways. The decision by Uganda to airlift part of its exports to Djibouti, also had some adverse effects.

4.20. Total payments on the investment income account, a substantial proportion of these being re-invested in Kenya, are estimated at K£74.3 million for 1978. Total dividends and profits declared, declined slightly in

+Revised

++Adjusted for 1977

the year, especially in the case of coffee and tea estate companies. The increase of nearly 35 per cent in net transfer receipts from K£29.5 to K£39.8 million is mainly due to increase in grants and technical assistance received by the Government. On the whole despite a net increase of 18.1 per cent in invisible receipts, the overall current account deficit deteriorated from K£24.1 million in 1977 to the extremely high figure of K£252.5 million in 1978.

4.21. The net capital inflow of K£171.0 million recorded in the public and private sector accounts partially offset the deficit on current account. This was an increase of nearly 89 per cent over 1977. Both public and private sectors registered large increases in capital inflows. The outflow of K£77.6 million from the foreign assets of the central monetary authorities and commercial banks was needed to bridge the gap between capital receipts and the current account deficit.

4.22. The increase in private long term capital receipts would have been higher, were it not for heavy repayments of loans and credits by some enterprises. Much of the capital inflow was used to finance imports of industrial machinery and construction and electric power equipment. Nearly a quarter of the private capital inflow was in the form of reinvested earnings. The capital inflow into the public sector was partly used to equip and modernize the parastatals which have been set up to succeed the defunct East African Community corporations and partly to finance extensive expenditure on general development.

4.23. The increases in the subscriptions to the IMF and in the use of Fund's resources are the main features of the central monetary authorities account. The increase in the subscription to the IMF of K£10.1 million, followed the quota increases contained in the Second Amendment to the Fund's Articles of Agreement mentioned earlier. In August 1978 Kenya repaid SDRs. 2.4 million provided under the fund's extended financing facility programme but purchased the equivalent of K£12.4 million under the reserve tranche in December. As a result the net use of Fund resources increased by 10 per cent from K£23.0 million in December 1977 to K£25.3 million in December 1978.

Prospects for the Future

4.24. The preface to the Development Plan 1979-1983 clearly outlines the negative aspects of the balance of payments constraints on the implementation of the plan. The sharp decline in the prices of coffee and tea, and the increases or anticipated increases in prices of crude petroleum, capital equipment and supplies for industry underlines the difficulties with which the year 1979 and the whole plan period may have to contend.

4.25. Over.reliance on a few export commodities whose prices can fluctuate widely and a structure of industrial production developed mainly to serve domestic markets but based on a high proportion of imported raw materials is still creating too many balance of payments problems. The latter is highlighted by the fact that industrial output had imported inputs valued at K£178.3 million and K£204 million, in 1977 and 1978, respectively—excluding inputs of fuels, motor vehicle parts and spare parts. Diversification of exports and encouragement of industries based on locally available resources especially those that utilize the country's abundant labour supply will help resolve the balance of payments constraints on development.

CHAPTER 5—EMPLOYMENT, EARNINGS AND CONSUMER PRICES

The plan period 1974.1978 has ended in a difficult year as far as wage employment is concerned. There was only 1 per cent increase in the numbers employed in 1978, well below the target rate of growth of 4.5 per cent set out in the plan. The low increase can mainly be attributed to the poor performance of agriculture sector. Good rainfall assisted the agricultural industry in the years 1976 and 1977 but in 1978 the rains were too heavy, a factor which had an adverse influence on agriculture. Industries using or selling agricultural produce were also affected. The fall in agricultural employment of some 17,400 had a particular impact on the growth of total employment. Excluding the agriculture sector, numbers in wage employment went up by 3.7 per cent in the rest of the economy in 1978. The Development Plan 1979.1983 has anticipated that about 225,000 persons will enter the labour market and that 50,000 would be able to find jobs in the modern sector each year. The performance against this target in 1978 when only about 9,000 could find jobs in the modern sector is a matter of concern. In the recent registration of job-seekers, about 246,000 persons have registered as being unemployed and this figure excludes the 1978 school leavers. The number of vacancies notified in April 1979 was 61,700 and it is expected that at least 70,000 persons will be able to find jobs in 1979 as a result of the Presidential directive for a 10 per cent growth in the numbers employed.

Employment

5.2. As shown in Table 5.1, the number in wage employment rose from 902.9 thousand in 1977 to 911.5 thousand in 1978, a rise of 8,600 which is equivalent to a growth rate of only 1 per cent. The problem of unemployment therefore continues to intensify as the number of job-seekers increases and more and more school leaves enter the labour market. The numbers engaged in the informal sector enterprises went up by a more significant margin of 10,000 or 9.6 per cent in 1978, while the number of self-employed

PERSONS ENgAgED: RECORDED TOTALS, JUNE, 1975-1978

	1975	1976	1977	'000's 1978*
Modern Establishments—Urban and Rural Areas— Wage Employees	819.1	857.5	902.9	911.5
Self-employed and unpaid family workers	56.9	57.5	57.0	59.6
Informal Establishments—Urban Areas	74.1	94.9	103.9	113.9
TOTAL	950.0	1,009.8	1,063.8	1,085.0

and unpaid family workers in modern sector establishments increased by 2,600 or 4.6 per cent. The increase in informal sector employment is probably due in part to the limited number of openings in the formal sector. It does, however, indicate the possibility of the projected annual increase of 11,000 in the numbers engaged in the informal sector in the 1979.1983 Plan period being realized. Establishments engaged in grocery and textile retail trade, and eating and drinking places still account for over 50 per cent of employment in the informal sector in urban areas, concentrated mainly in three major towns—Nairobi, Mombasa and Kisumu.

5.3. Changes in the numbers in wage employment as shown in Tables 5.2 and 5.3 reflect the effect of the weather and the general economic conditions.

*Provisional.

As already stated employment in agriculture sector fell by 17,400 or 8.4 per cent in 1978 due to heavy rains which through a reduction in the level of activity caused the number of casual employees in particular to be significantly reduced. An increase of 3.7 per cent in total employment in the rest of the economy is, however, a satisfactory outcome. A total of 12,700 employees were absorbed by the new establishments which came into operation in 1978.

*Provisional.

5.4. Overall wage employment in the private sector, as shown in Table 5.4 fell by 0.9 per cent, largely due to the decline in numbers employed in agriculture sector, as stated above. The unfavourable weather conditions affected numbers in wage employment on coffee and sisal farms as well as in establishments engaged in mixed farming and ranching. The acreage under pyrethrum has also continued to decline and as a consequence employment in this labour intensive sub-section of the sector has been adversely affected too.

5.5. The decline in the numbers employed in the mining and quarrying industry which had first been set in 1976 has not been halted. Employment in this sector fell by a further 500 in 1978 reducing the already small number of 2,400 employees to only 1,900.

5.6. The drop in the numbers employed in the private sector would have been significantly larger but for the increase of 11.2 per cent in numbers employed in the manufacturing sector in 1978. This follows an increase of 7.5 per cent in employment in this sector in 1977. Increases of as much as 20 per cent were recorded in establishments engaged in manufacture of

tobacco and footwear; in spinning, weaving and finishing of textiles; as well as in knitting mills; and in cordage, rope and twine factories; and sawmills. The textile industry has been helped in its recovery by the relaxation of regulations regarding the importation of those raw materials which local sources have been unable to supply.

5.7. Despite the very large rise in the value of building plans approved in 1977, wage employment in 1978 in the private construction sector, according to the data available, fell by a further 3.4 per cent. This, however, may be a reflection of more use being made of sub-contractors whose wage employees are particularly difficult to enumerate. Employment rose significantly in public sector construction.

5.8. There was a rise of 5.1 per cent in employment in establishments engaged in transport in the private sector, while employment in establishments engaged in finance, insurance, real estate and business services increased by 7 per cent. Employment in distribution sectors and in restaurants and hotels went down by 1.2 per cent. The rate of growth in wage employment in the public sector also slowed down to 3.6 per cent in 1978 as compared with an increase of 5.6 per cent in 1977. Table 5.5 sets out the changes in employment in the public sector. Numbers employed in the Central Government went up by 11,700 or 7.4 per cent in 1978. The increase is accounted for by absorption of Kenya nationals who were previously working for the late East African Community and in addition in 1978 the Government increased the number of casuals engaged on Rural Access Roads Programme particularly in Trans-Nzoia District and on the construction of Kitale-Kapenguria road. There was a small fall in the numbers employed by parastatal bodies while there was a rise of 18.8 per cent or 3,200 in the numbers employed in the organizations where the public sector has a majority control. This was due mainly to the fact that once the public sector has acquired 50 per cent or more of the equity capital in any firm, the firm is reclassified from the private to the public sector. The largest of such establishments to be so reclassified in 1978 was Kenya Toray Mills Ltd.

5.9. Figures on numbers in wage employment by province are set out in Table 5.6. Nairobi continues to have the largest number of employees among the provinces, accounting for about 27 per cent of the overall total for the country as a whole. The drop in employment in Central, Western and Rift Valley provinces in 1978 was the most significant change in the geographical break down of employment in the country. These provinces are mainly agricultural and as noted above, poor weather conditions directly affected employment on coffee and sisal plantations and livestock farms in these provinces. The decline in employment in Western Province also resulted from the dismissal of 2,000 untrained primary school teachers as directed by the Teachers Service Commission in May 1978. These teachers, however, appear to have been replaced later in the year. Employment in other provinces increased on average by about 4.1 per cent in 1978.

5.10. Details on wage employment in 1973 and 1978 in selected industries by major towns are given in Table 5.7. These major towns accounted for 47.4 per cent of the total numbers in wage employment in 1978. The remaining 52.6 per cent or more than one half of all wage employees, work in rural areas and the smaller towns. Wage employment in major towns has increased by 31.2 per cent over this five-year period. Employment in Nairobi itself has risen by 19.9 per cent while for all other towns covered in the table the increase was 47.4 per cent. The shift in favour of other towns other than Nairobi is due partly to the fact that the new large manufacturing enterprises have tended to be located in a number of towns in an effort to encourage more activity in the rural areas. In fact incentives are given to encourage this spread of manufacturing activity. Most of the growth in Nairobi was

concentrated in establishments in the manufacturing sector, and in enterprises offering finance and business services while employment in other activities has grown at a much lower rate. Increase in employment in the establishments in transport and communications sector in the main towns has registered a particularly low growth rate of 16.4 per cent, between 1973 and 1978, compared with an increase of 37.3 per cent in manufacturing sector, 41.2 per cent in construction, 39.1 per cent in distribution sector including restaurants and hotels, and 63.5 per cent in business services.

5.11. The numbers in wage employment by industry, citizenship and sex are shown in Table 5.8. Females still account for only 17.1 per cent of the total wage employment, the total number of females in wage employment having increased by 0.8 per cent in 1978. The number of non-citizen employees has continued to fall in 1978 to 1.6 per cent of the total in wage

employment. There were a total of 14,400 non-citizens in wage employment in 1978, which is 1,000 less than in 1977. Any substantial return of Ugandans to their own country following the developments there in 1979 will have its effect on the employment of non-citizens in 1979.

5.12. Table 5.9 details changes in the number of wage employees in selected occupation groups for the two years 1976 and 1978. There was a substantial rise of 4,800 or 5.9 per cent in the employment of skilled workers while persons classed as general managers or salaried directors increased

from 11,400 to 12,000. The largest occupational group is that of teachers and their number rose from 100,600 in 1976 to 101,900 in 1978. The number of professionals excluding teachers rose from 8,700 in 1976 to 9,600 in 1978.

Earnings

5.13. Table 5.10 shows total earnings from wage employment. Earnings rose to K£483.0 million in 1978 compared with K£431.4 million in 1977, an increase of 12 per cent. Although wage employment in the private sector fell slightly between 1977 and 1978 there was an increase of 11.2 per cent in total wages and salaries paid out to employees engaged in enterprises in this sector. This increase in the private sector was mainly due to wage awards arising from negotiations with employers. The increase of 12.7 per cent in the earnings of employees in the public sector is accounted for by both an increase in numbers employed and increased average earnings often arising from the payment of annual increments. A salary review by the Kenya Posts and Telecommunications Corporation in May 1978 increased wages to its employees by between 4 per cent and 15 per cent while the Kenya Ports Authority raised wages of its employees by between 8 per cent and 20 per cent in February 1978.

5.14. Changes in average wage earnings are detailed in Table 5.12. Average earnings in the public sector rose by 8.7 per cent while there was an increase of 12.2 per cent in the average earnings in the private sector. Average earnings of employees in private sector in agriculture and forestry rose by 18.6 per cent and in construction by 14.9 per cent, above the average for the private sector as a whole. A small fall was recorded for employees in finance, insurance, real estate and business services although the average earnings in these activities were two and a half times the private sector's overall average. Employees in mining also had a fall in average earnings of 5.3 per cent; while there were rises slightly above the overall average of 12.2 per cent for employees in distribution sector including restaurants and hotels and for employees in transport and communications sector.

5.15. In the public sector earnings of Central Government employees rose by 5.5 per cent in 1978 or substantially less than the increases of 11.2 per cent for employees in parastatal bodies including teachers, 13.6 per cent for employees in concerns where the public sector has a major control and 8.8 per cent for local government employees.

5.16. Table 5.12 indicates that average nominal earnings in the economy as a whole rose by 10.9 per cent in 1978 which may be compared with the average increase of 12.5 per cent in consumer prices discussed below. Real average earnings thus declined by a further 1.4 per cent for the year 1978 as detailed in Table 5.14 and were on a par with those pertaining in 1975 before the substantial awards made in 1976. Table 5.14 shows the growth in average real wages from 1975 to 1978. The fall of 2.5 per cent in average real wage in 1975 was followed by a rise of 5.5 per cent in 1976 and subsequent falls of 4.3 and 1.4 per cent, respectively, in 1977 and 1978.

5.17. A comparison of average real earnings in private sector and public sector since 1974 shows that private sector earnings have fallen by 4.4 per cent while those in the public sector have fallen by 3.2 per cent. Industrial groups in the private sector to show particular falls in real earnings since 1974 include mining and quarrying with a reduction of 40 per cent, transport fall communications 23.4 per cent, and the services sectors with an average a of 19 percent generalization it seems to be the case that except

for particular groups such as mining the general movement in wages and salaries since 1974 has been in the direction of greater equality between different industrial groups. Despite this movement earnings of agricultural workers in real terms were still less than one-third of the national average in 1978.

Wage Awards

5.18. Basic statutory minimum wages have not been revised since October 1977 when they were fixed at K.Sh. 350 per month for Nairobi. From October 1977 to March 1979 the consumer price index for the lower income group has risen by 15.5 per cent.

5.19. An analysis of wage increases in the private sector registered with the Ministry of Labour indicates that for a group of 259 firms increases for lower income employees i.e. those earning less than K£35 per month were 7.6 per cent in 1978 following rises of 8 per cent in 1977, while for employees in the middle income group the rises amounted to 4.6 per cent in 1978 and 9.9 per cent in 1977. There are substantial variations in the average increases

for these different categories between various industrial sectors. For example wage increases in wholesale and retail trade in 1978 were 2.4 and 2.5 per cent for each of the two income groups, respectively, whereas for transport and communications the increase for employees in the middle income group was 17.9 per cent. In manufacturing sector wages in 1978 rose by 9.1 per cent for employees in the lower income group and by 7.8 per cent for employees in the middle income group.

Unemployment

5.20. A detailed enquiry conducted by the Ministry of Labour in May 1979 registered 246,081 job-seekers who declared themselves as unemployed while a total of 29,709 vacancies were reported by private firms. Of the total who had reported themselves unemployed 99,024 were registered in Nairobi, 43,377 in the Nyanza and Western Provinces, 40,304 in Rift Valley Province, 37,260 in the Coast Province and 26,116 in the Central and Eastern

Provinces. A significant number of the vacancies were however for the skilled or professional and technical personnel, which might make them difficult to be filled by the persons registered as seeking employment. In addition to the vacancies in the private sector a total of 32,039 vacancies had also been identified in the public sector mainly in Central Government.

Consumer Prices

5.21. During 1978, inflation as measured by average changes in consumer prices for lower, middle and upper income groups rose by 17.0, 10.3 and 10.0 per cent, respectively, yielding an average rise in consumer prices of 12.5 per cent as compared with the rate of 12.7 per cent in 1977. Details of the rise in prices by groups of commodities show that in 1978 rises for the lower income group were most marked in the prices for clothing and footwear, rents and furniture and furnishings; for the middle income group in prices of food, drink and tobacco and rents; and for the upper income group in prices of drink and tobacco, furniture and furnishings and health care.

PERCENTAGE CHANGES IN NAIROBI CONSUMER PRICES: DECEMBER, 1975 - MARCH, 1979

Table 5.15

	Dec. 75 to Dec. 76	Dec. 76 to Dec. 77	Dec. 77 to Dec. 78	Dec. 78 to March 79	Dec. 75 to March 79

Nairobi Middle Income Index	9.3	13.5	8.1	0.9	35.3
Nairobi Upper Income Index	7.7	14.4	7.6	2.7	36.3

5.22. Between December 1977 and December 1978 consumer prices went up by 13.7, 8.1 and 7.6 per cent, respectively, for lower, middle and upper groups. This is a moderate rise compared with increases of 21.0, 13.5 and 14.4 per cent in 1977. Food prices and rents rose less steeply in 1978 as compared with the increases in 1977. The food index rose by an average of 10.4 per cent between December 1977 and December 1978 while rents rose by 10.5 per cent, compared with rises of 16.4 and 23.6 per cent, respectively, between December 1976 and December 1977. For the period July 1978 to June 1979 prices are expected to rise by approximately 9 per cent compared with an increase of 13.7 per cent in the period July 1977 to June 1978, providing a further indication of the moderating rate of consumer price rises.

5.23. A composite price index excluding rent for lower and middle income groups in Mombasa, Kisumu and Nakuru has been prepared. In 1978 average prices in Mombasa, Kisumu and Nakuru went up by 7.1, 9.4 and 10.9 per cent respectively. There were variations in the groups of commodities which registered high price increases. In Mombasa the largest increases were recorded in prices of furniture and furnishings and clothing and footwear; in Kisumu prices of furniture and furnishings; and in Nakuru in prices of clothing and footwear, fuel, light and water, furniture and furnishings and food

5.24. Indices have also been computed for purchased items of consumption in rural areas. Prices for basic food commodities were collected from the rural markets whereas prices for other commodity items were collected from the smaller urban centres in the provinces. The results indicate that consumer prices in the rural areas went up by 8.5 per cent during 1978. The largest rises were recorded in prices of drink and tobacco. Detailed studies in the rural areas are now being undertaken and it is expected that by the end of 1979 prices for all commodity items will be collected regularly from rural markets. The weighting of groups of commodities and the rises in prices of these groups varies between rural areas and the smaller towns and between these towns and Nairobi so that overall price rises can vary quite markedly.

CHAPTER 6—PUBLIC FINANCE

The financial policy adopted by a central government in a particular year influences the rate of inflation, the rate of growth and the level of employment in the economy concerned. In the budget speech in June 1978 it was stressed that inflation was the country's most difficult economic problem and that while the balance of payments was presenting problems leading in 1978 to a reduction in the country's foreign reserves the outlook for 1979 was even more serious. Restraints, it was noted, were necessary in formulating the budget for 1978/79 but that their imposition was not easy in view of the Government's commitments towards large development projects and increased current expenditure resulting from past investments. In the event 1978/79 has proved to be a year of particular constraints. Government capital expenditure has been reduced substantially below the level forecast due mainly to difficulties over financing as a result of the decline in current surplus and a drop in

long-term borrowing.

6.2. The current revenue increased by only K£30.2 million, equivalent of 6.4 per cent in 1978/79, after a sharp rise of K£151.6 million or 47.3 per cent in 1977/78. At the same time current expenditure, which had risen by KX115.0 million or much less than the growth in revenue in 1977/78, is estimated to have increased by K£ 64 million or 16 per cent in 1978/79. As a result the current surplus available to help finance capital expenditure has declined from the high level of K£72.1 million recorded in 1977/78 to K£21.4 million in 1978/79. Capital expenditure both on development and on investment was earlier estimated to amount to K£270.9 million in 1978/ 79. It is now forecast that such expenditure as per the latest indications will be K£215 million, as compared to capital expenditure of K£190.3 million in 1977/78.

6.3. The overall deficit has risen from K£118.2 million in 1977/78 to K£177.2 million in 1978/79. Hence whilst external grants have trebled from K£9.0 million in 1977/78 to K£28.7 million in 1978/79, there was still a need to borrow K£148.5 million in 1978/79 compared with K£109.2 million in the previous year. As shown in Table 6.1 external loans have in 1978/79 yielded K£58.2 million and long-term domestic borrowing a further K£42.6 million leaving a deficit of K£47.7 million. This deficit has been covered by increasing the issue of Treasury Bills, direct local borrowing from the banking sector and to some extent running down the accumulated cash balances.

6.4 The rise in current expenditure has been continuous and at a relatively high level since 1974/75. To some extent this has been occasioned by the inflation prevalent in the economy but it is also accounted for by the need to spend substantial sums on defence; by the takeover of functions which were previously the responsibility of the late East African Community; and by the wider coverage of social services. Total Government expenditure in

'This table details Kenya Government's deficit and its financing. The details on this table are set out in such a way as to isolate distortions caused by items of "Investment" expenditure. These items consists of expenditure on purchase of equity in enterprises and loans and advances to various sectors of the economy. Similarly current revenue, as shown in this table, excludes long-term and short-term financing. Basic aggregates in this table can be reconciled as follows;—

1. Current revenue as shown in this table plus short-term borrowing, minus memorandum item (ii) equals revenue on the Recurrent Account as shown in Table 6.2.
2. Current expenditure plus development expenditure and investment expenditure as shown in this table equal total expenditure shown in Table 6.6.

**Provisional.

+See the Chapter text. It is suggested that total spending may be K£72 million less than these estimates.

1978/79 was 122 per cent more than in 1974/75 while current revenue over the same period has also risen by 122 per cent. There has been a similar proportionate growth in the spending on development.

6.5. The revenue estimates for 1978/79 had anticipated receipts from income tax to yield K£172 million, import and excise duties K£158 million and the sales tax K£120 million. The estimated out-turn under each head is K£147 million from income tax, K£149 million from imports and excise

duties and K£100 million from the sales tax, amounting to an overall shortfall of 12.0 per cent between the revenue collection as forecast and actual receipts. This inability to reach the budget estimates is the result to some extent of the difficulties the economy was faced with in the latter part of 1978. These difficulties arose from the balance of payments constraints which as seen in Chapter 4 had resulted in imposition of restrictions on both domestic credit and imports.

Scope of Government in the Economy

6.6. One measure of the importance of the Central Government in the economy is the numbers it employs and expenditure on their wages and salaries. The numbers employed by the Central Government rose from 157,200 in 1977 to 168,900 in 1978, an increase of 7.4 per cent and their earnings rose from K£99.6 million to K£112.9 million, a growth of 13.3 per cent. There will be a further substantial rise in the numbers employed in 1979 in line with the Presidential directive on employment. Direct expenditure by the Government on capital formation rose from K£71.4 million in 1976/77 to K£90.7 million in 1977/78 and the total was probably a little higher in 1978/79.

6.7. Total current and capital expenditure by the Government at constant prices is estimated to have risen by 13.7 per cent in 1978 after an increase of 13.3 per cent in 1977. These growth rates are significantly above those recorded in 1975 and 1976 and may be compared with overall growth rates in GDP of 8.6 per cent and 5.7 per cent, respectively, in 1977 and 1978.

Summary of Government Revenues and Expenditure

6.8. The current revenue increased by an average of 22 per cent per year between 1974/75 and 1978/79. However, in 1977/78 the rise was 47.3 per cent while in 1978/79 the rate of increase has declined to only 6.4 per cent. The latter decline in growth in current revenue has occurred in a year of an increase in consumer prices of about 9 per cent. As a result revenue available to the Central Government fell by about 2.4 per cent in real terms. Current expenditure in 1978/79 has on the other hand risen by about 16 per cent over the level in 1977/78. This growth is in real terms equal to an approximate increase of 7 per cent. Thus in real terms, current revenue has fallen by 2 per cent in 1978/79 against a rise in expenditure of 7 per cent.

6.9. Total development expenditure in 1978/79 as indicated above is expected to be substantially below the level estimated earlier but will nevertheless show a small rise on the 1977/78 figure of K£115.1 million. At around K£115 to K£120 million the Central Government outlays on development have moved to a new plateau of expenditure in the last two years compared with the average of K£74 million in the three years 1974/75 to 1976/77. Investment expenditure mainly as loans to parastatals amounted

to about K£90 million in 1978/79 compared with K£75 million in 1977/78; the average expenditure in the last two years being very much higher than the average for the three preceding years. The disparity between the forecast and actual out-turn of capital expenditure in the last two financial years is accounted for by combined influence of constraints on external finance and by lack of effective capacity in the economy to absorb greater capital expenditure.

6.10. The overall deficit, that is the difference between total expenditure and total receipts less borrowing has risen from K£78.7 million in 1976/77 to K£109.2 million in 1977/78 and to approximately K£149 million in 1978/79. The deficit in 1978/79 is by far the highest ever recorded but is substantially below the earlier forecast of K£220.8 million.

6.11. The excess of capital expenditure over the current surplus indicates the level of additional demand created by the Government in the domestic economy. In 1977/78 this excess amounted to K£118.2 million but in 1978/79 is estimated to have risen to K£177 million. Part of this excess in 1977/78 and 1978/79 was covered by long-term domestic borrowing. In 1977/78 such borrowing reached a record level of K£66.9 million but in 1978/79 they were reduced to K£42.6 million so that the net gap created by the excess expenditure has increased from K£51.3 million in 1977/78 to K£134.4 million in 1978/79. External grants and loans are used to help cover the imports of foreign resources required to supplement what is available domestically and in 1977/78 such grants and loans were valued at K£52.3 million, just about covering the net gap in Kenya's domestic expenditure arising from operations of the Central Government. In 1978/79, however, despite a rise in the total of external grants and loans to K£86.9 million, there is still a net gap of K£47.4 million to be funded.

Recurrent Revenue

6.12. Direct taxes have been falling in their relative importance as a source of revenue while indirect taxes have been raised progressively and their coverage extended. In 1974/75 direct taxes delivered current revenue amounting to K£77.2 million and indirect taxes K£119.9 million. By 1978/79 as shown in Table 6.2, the receipts from direct taxes had risen to K£147.5 million and from indirect taxes to K£272.5 million, respectively, the proportion of receipts accounted for by indirect taxes having risen from 61 per cent to 65 per cent over the period. This tendency is in line with the policies being followed in most countries to increase the importance of indirect taxation both to raise revenue at a faster rate and to reduce inequalities arising from the application of direct taxes to the employed and the self-employed.

6.13. Budget changes in 1978/79 had the effect of further raising duty levels on beer, tobacco, spirits and wines, increasing the sales tax on petrol and diesel oil, and raising the sales tax on passenger vehicles other than the

larger buses from 15 to 20 per cent. The new Customs and Excise Bill was introduced as part of the budget and subsequently ratified. There were a number of changes introduced, some reducing, others increasing duty levels but on the whole having a very small impact on total collection of import duties. A large number of small manufacturers were exempted from sales tax by the raising of the limit of sales at which sales tax applies to an enterprise from K£5,000 to K£10,000 a year.

6.14. Import duty collections as shown in Table 6.3 rose from K£81.8 million in 1977 to K£106.4 million in 1978. Receipts from duties on imports of fuels went up from K£16.8 million in 1977 to K£22.9 million in 1978, on transport equipment from K£13.3 million to K£16.9 million and on machinery from K£12.3 million to K£18.4 million. Revenue from excise duties, as per Table 6.4 increased from K£33.8 million in 1978 to K£44.7 million in 1978. Collections from excise duty on beer and spirits went up from K£14.3 million to K£16.1 million, on cigarettes from K£12.5 million

to K£17.2 million and on sugar from K£9.1 million to K£11.4 million. Lastly changes in sales tax yielded an increase of K£7.2 million from K£92.8 million in 1977/78 to K£100 million in 1978/79, an increase of 7.8 per cent. The rise in 1977/78 was, however, of much larger magnitude of 41.8 per cent.

Development Account

6.15. The possible level of Government expenditure on development and investment in 1978/79 is now assessed at K£215 million substantially below the amount originally estimated but still K£24.7 million above the revised out-turn for 1977/78 and more than 72 per cent higher than the expenditure incurred in 1976/77. As indicated earlier development expenditure in 1978/79 had originally been forecast at K£175.5 million and investment expenditure including loans at K£95.3 million. Loans were to account for K£83.5 million of investment expenditure with the bulk of loans as in earlier

**Actual expenditure is unlikely to exceed K£215 million.

years being given to the parastatals and public financial organizations. Expenditure on such projects as the Upper Tana reservoir, on successor corporations which have been set up to take over from the late corporations of the East African Community, and on a variety of purposes ranging from electricity to housing was financed by such loans. The two principle parastatals responsible for loans to farmers were also amongst major recipients of these loans.

6.16. Details on financing of expenditure are set out in Table 6.5. Receipts of surplus from the current account have dropped from K£72.1 million in 1977/78 to K£21.4 million in 1978/79, while external loans and grants account for K£86.9 million of the total capital expenditure in 1978/79 compared with K£52.2 million in 1977/78. Other receipts from long term domestic borrowing have fallen from K£66.9 million in 1977/78 to K£42.6 million in 1978/79. Short-term borrowing has financed most of the remainder of the capital expenditure. In 1977/78 a net repayment of short-term borrowing of K£29.3 million had been effected while cash balances were rundown by K£28.3 million.

Functional and Economic Classification of Expenditure

6.17. Table 6.6 details data on the functional classification of recurrent and development expenditure. Expenditure on defence has risen from K£79.4 million in 1977/78 to a total of K£108.2 million in 1978/79. Education on which K£113.9 million was spent in 1978/79 and defence accounted between them for 30 per cent of total expenditure based on the overall total of KX751.8 million. However, as this total will effectively be reduced to

about K£690 million the proportionate expenditure on defence and education could rise further. Economic services accounted for another 36 per cent of total expenditure in 1978/79 with most spending on economic services being incurred on agriculture, forestry and fishing, electricity and water, roads and other transport and communication services.

6.18. The economic classification of Central Government expenditure is given in Table 6.7. Current expenditure accounts for 66 per cent of the total in 1978/79, the same as in 1977/78. Expenditure on goods and services including labour costs accounts for two-thirds of current expenditure in 1978/79. Current expenditure on goods and services has risen from K£155 million in 1975/76 to K£332.8 million in 1978/79, an increase of 114 per cent.

6.19. Gross fixed capital formation from direct Government capital expenditure was originally estimated to amount to K£130.3 million in 1978/79. It may, however, be substantially lower when the actual figures become available, though it should still be higher than the total of K£90.7 million in 1977/78. The level of loan repayments has fallen from K£27.8 million in 1977/78 to K£20.1 million in 1978/79.

Public Debt

6.20. Kenya's public debt has nearly doubled in the last four years from K£265.5 million at June 1974 to K£526.2 million at June 1978. Table 6.8 refers. There is likely to have been a further substantial rise in the year to June 1979. At June 1978 the funded and unfunded debts constituted respectively 52.5 per cent and 47.5 per cent of the total debt of which external debt accounted for 46.1 per cent and internal debt 53.9 per cent. Since 1974 the relative importance of external debt has declined. Table 6.9 sets out details on the holdings of unfunded debt. At June 1978 the U.K., West Germany, U.S.A. and Japan in that order were the major bilateral holders of external unfunded debt, while the World Bank and its subsidiary the IDA

were by far the most prominent holders of debt amongst international organizations. The EEC, IMF and OPEC featured as holders of unfunded debt for the first time in 1978. The National Security Fund as shown in Table 6.10 is the most important holder of funded debt followed by the Central Bank. Holdings by these two institutions have risen from K£100.5 million and K£37.7 million, respectively, at June 1977 to K£130.3 million and K£44.3 million at June 1978. The commercial banks held K£31.0 million of funded debt at June 1978 and the insurance companies K£11.9 million.

6.21. The annual public debt servicing charges and their relationship to earnings from goods and services are set out in Tables 6.11 and 6.12. Despite the substantial rise in the annual net debt servicing charge from K£26.6 million at June 1977 to K£56.0 million at June 1978, the debt service charge

*Including debt redemption. Interest payments on drawing on IMF are, however, excluded.

for external debt accounted for only 2.3 per cent of earnings front exports of goods and services in 1977. The year 1977 was exceptional, however, and a rise in debt service charges related to a fall in earnings from exports of goods and services in 1978 raised the external debt servicing ratio to 5.5 per cent. A further fall in exports in 1979 accompanied by greater debt service payments will probably raise the debt service ratio to more than 7 per cent.

Local Authorities

6.22. Total expenditure by local authorities as shown in Table 6.13 has risen at a fairly fast rate by a total of 78 per cent between 1974 and 1978. In 1978 Nairobi City Council accounted for just under half the total expenditure of all local authorities.

EXPENDITURE OF LOCAL AUTHORITIES, 1974-1978

Table 6.13

K£million

	MUNICIPALITIES			TOWN AND COUNTY COUNCILS	TOTAL
	Nairobi City Council	Other Municipal Councils	Total		
1974	13.80	7.92	21.72	3.96	25.68
1975	15.35	8.53	23.89	5.25	29.14

1977	20.54	10.98	31.52	7.15	38.67
1978*	22.56	12.96	35.52	10.13	45.65

*As shown in Council's Estimates.

6.23. Expenditure by municipal councils by function is given in Table 6.14. About 29 per cent of the total in 1978 was incurred on community services, 31 per cent on social services and a further 31 per cent on trading services. The more important individual items of expenditure consist of sanitary services, education, water undertakings and housing estates. However, while expenditure on sanitary services and water undertakings has virtually doubled since 1974 that on education and housing estates has increased by only 49 per cent and 30 per cent, respectively. As shown in Table 6.15, excluding capital Projects and loan charges, the bulk of expenditure by municipal councils has been incurred on wages and salaries. These accounted for 60 per cent of current expenditure of municipalities in 1978 while 37 per cent of the remainder was incurred on other goods and services. Capital projects undertaken by municipalities cost K£8.9 million in 1978, an increase of 22 per cent over 1977 and 74 per cent over the level of 1976. Loan charges of the Municipalities have increased to K£4.8 million and accounted for 13 per cent of total expenditure in 1978.

6.24. Licences, cesses and rates are the largest sources of revenue for municipalities followed by income from property, water sales and sewerage and refuse removal charges. As per details in Table 6.16, Central Government grants accounted for 15 per cent of total receipts of municipalities in 1978 while loans at K£7.2 million in 1978 provided a further 20 per cent.

6.25. Table 6.17 sets out an economic analysis of expenditure and revenue of town and county councils. Expenditure by the authorities has been rising rapidly since 1974 having risen to two and one half times by 1978. Receipts from indirect taxes levied by the councils have risen sharply especially in 1978 to a proportion of 53 per cent of total revenue. A further 10 per cent was derived from property income and 19 per cent from sales of goods and services. Total revenue receipts in 1978 amounted to K£10.8 million as compared to the total expenditure of K£10.1 million. The latter includes expenditure of K£4.3 million on wages and salaries, K£2.7 million on other goods and services and K£2.0 million on capital projects.

CHAPTER 7—TRADE

The balance of external trade moved from a position of a small deficit in 1977 to one in which export earnings only covered 60 per cent of the cost of imports in 1978. This situation was similar to that of 1974 which was a year of crisis. While exports fell by 21.1 per cent in value, there was a rise of 24.4 per cent in value of imports. The visible trade deficit as a result rose to K£265.5 million in 1978 from K£29.6 million in 1977. This deficit, however, is expected to fall in 1979 due to the various import restriction measures taken in late 1978, coupled with the effects of the decline in domestic demand which was induced by the reduction in earnings from coffee and tea. Imports totalled K£661.2 million in 1978 whereas exports earned only K£395.7 million. The volume of imports rose by 25.0 per cent and there was a fall in unit prices of 0.7 per cent, while volume of exports declined by 7.2 per cent and unit prices by 14.8 per cent. The terms of trade as a result worsened by 14.2 per cent.

7.2. As shown in Table 7.1 there was a very large increase in the trade deficit with markets outside East Africa; this grew from K£89.3 million in 1977 to a record of K£304.3 million in 1978. Due to the continued border closure with Tanzania and the sharp decline in exports to Uganda, the surplus on the East African markets fell from K£59.7 million in 1977 to K£38.9 million in 1978.

*Described in the Annual Trade Report as "Direct Imports".

**Described in the Annual Trade Report as "Domestic Exports".

1.7. The five years from 1974 to 1979 have been a rather unstable period for Kenya's external trade. The large increases in the prices of crude petroleum in 1974 were followed by particularly heavy importation with the result that Kenya had to contend with a large trade deficit at a time when its foreign reserves were at a very low level. Although 1975 was another year of substantial deficit, the boom in coffee and tea prices in 1976 and 1977 led to the foreign reserves being built-up to record levels. These reserves were depleted in 1978 when imports rose and exports fell markedly in both value and volume to yield a record deficit. The situation in 1979 is not satisfactory either and as already indicated steps have been taken to control imports.

Price changes

7.4. Table 7.2 contains information on the price indices of imports and exports for the years 1975 to 1978. The average import price declined by 0.7 per cent in 1978, after an increase of 7.7 per cent in 1977. While import prices of non-oil commodities increased by 1.2 per cent, the average price of petroleum imports fell by one per cent due largely to the effects of the decline in the value of the US dollar of 6.8 per cent in terms of the domestic currency. The same thing happened with respect to some other commodities as well, especially where these products are traditionally priced in US dollars. The

Volume Changes

7.6. Table 7.3 sets out the quantum indices for imports and exports for the years 1975 to 1978. The volume of imports was 25 per cent higher than in 1977. This is the highest level recorded for the volume of imports into Kenya, 10.1 per cent higher than in 1974 which marked the last peak level for imports. The extent of the increase in 1978 indicates a very high propensity in the economy to import and when controls are relaxed as they were in early 1978 then imports are made in increasing quantities.

7.7. Imports of non-oil products increased by 29.2 per cent in 1978. Imports of machinery and transport equipment rose by 55.5 per cent, beverages and tobacco by 72.5 per cent and animal and vegetable oils and fats by 22.0 per cent. There was a decrease of 31.5 per cent in the quantities of imported basic raw materials mainly due to the decline in imports of cotton and synthetic rubber.

7.8. Overall, the volume of exports declined by 7.2 per cent with a large decline of 14.0 per cent being recorded in exports of mineral fuels. This was brought about by the fall in sales of motor spirits, jet fuel and kerosene to Uganda. Overall exports of non-oil products declined by 5.3 per cent while exports of beverages and tobacco fell by 22.6 per cent.

Terms of Trade

7.9. Table 7.4 shows Kenya's terms of trade for the years 1975 to 1978. In 1978 there was an overall reduction of 14.2 per cent in Kenya's terms of trade and for non-oil items the reduction was 19.1 per cent. The lowest level in these trade terms was recorded in 1975 with a decline of 22 points from the 1972 level.

TERMS OF TRADE, 1975-1978

	1975	1976	1977	1978
All Items	78	91	120	103
Non-Oil Items	77	95	131	106

Analysis by Broad Economic Categories

7.10. *Imports.*—Analysis of imports by broad economic categories is shown in Table 7.5 while Table 7.6 details import values of some selected items. Since 1974 there has been an upward trend in the relative share of machinery and transport equipment in the total value of imports. These items accounted for 40.5 per cent of the total in 1978 compared to 22.8 per cent in 1974. After the sharp rise in prices of oil products in 1974 the share of mineral fuels in total imports has since declined to 17.8 per cent of the total in 1978, compared to 21.3 per cent in 1974. Imports of non-food industrial supplies, which

included a large proportion of processed goods, accounted for 27.7 per cent of imports in 1978. In addition to K£179.8 million worth of imports of non-food industrial supplies, imports of K£24.2 million of food and beverage supplies for industry were also made in 1978 adding to an overall total of K£204 million. This total is 14.4 per cent higher than that of K£178.3 million for 1977 and 26.6 per cent more than the total of K£161.2 million recorded in 1974. These figures reflect the requirements of imports of raw materials for industry to keep a reasonable level of capacity working on the present production methods used in the manufacturing sector, they exclude imports of motor vehicle kits, chassis, etc., for the vehicle assembly plants.

7.11. The largest increase in value terms in 1978 occurred in imports of transport equipment from K£76.1 million in 1977 to K£126.6 million in 1978, a rise of 66.5 per cent. Of these, the value of passenger motor-vehicles went up from K£12.4 million in 1977 to K£20.2 million in 1978, an increase of 62.9 per cent whereas the value of imports of industrial transport equipment consisting

per cent, from K£38.5 million in 1977 to K£63.7 million in 1978. The value of imports of parts and accessories for transport equipment reached the high figure of K£42.8 million in 1978, an increase of 70 per cent above, the level recorded in 1977.

7.12. Imports of food and beverages rose by 40.2 per cent from K£27.5 million in 1977 to K£38.5 million in 1978. Imports of processed foods and beverages both for industry and domestic consumption accounted for K£26.8 million of the total in 1978.

7.13. A rise of 37.0 per cent was recorded in the value of imports of machinery and other capital equipment. The total increased from K£103.0 million in 1977 to K£141.1 million in 1978. Imports in 1978 consisted mainly of machinery for sugar factories and other industries, and general construction and earth moving equipment. Imports of parts and accessories for machinery rose from K£11.6 to K£15.0 million between 1977 and 1978.

7.14. There was an increase of 19.4 per cent in the value of imports of other consumer goods too, from K£46.4 million in 1977 to K£55.3 million in 1978. The level of imports of consumer goods including food and beverages for household consumption and passenger motor vehicles has risen from K£59.7 million in 1974 to K£89.9 million in 1978, an increase of just over 50 per cent in value terms. This is essentially a price increase and represents no real increase in volume terms. The level of consumer goods in value terms as a proportion of total imports, has declined from 15.6 per cent in 1974 to 13.6 per cent in 1978.

7.15. The value of imports of primary fuels in 1978 decreased by 7.1 per cent from K£ 101.0 million to K£93.9 million whereas that of processed fuels increased by 48.2 per cent from K£16.1 million to K£23.9 million. To some extent the changes in the relative distribution of petroleum and product imports in 1978 was due to technical problems at the oil refinery.

7.16. *Exports*.—Table 7.7 provides an analysis of exports by broad economic categories. The overall pattern of the relative shares of the various groups of exports changed in 1978, because the share of food and beverages fell from 65.6 per cent in 1977 to 58.8 per cent in 1978, prompting increases in the proportions of the other categories. The share of non-food industrial supplies rose from 13.5 per cent to 17.9 per cent in total exports while the shares of fuel and lubricants and consumer goods other than foods increased from 17.3 and 3.0 per cent to 18.6 and 4.0 per cent, respectively.

*Excluding Re.Exports.

and animal feeds increased from 1977 to 1978 whereas that of other commodities declined. In the case of coffee the quantity exported fell from the record level of 94,344 tonnes in 1977 to 85,405 tonnes in 1978 though at this level it was still well above the average of 78,677 tonnes of the last six years. The quantity of tea exported has risen regularly since 1974 and the total in 1978 at 84,659 tonnes was 71 per cent higher than the 49,600 tonnes recorded for 1974. Exports of fluorspar have also risen throughout this period from 37,857 to 102,899 tonnes. Substantial declines were recorded in exports of pyrethrum, meat products, maize, cotton and cashewnuts.

Direction of Trade

7.18. The pattern of Kenya's supplies of imports, as per figures in Table 7.11 did not change much in 1978. The EEC countries continued to be the dominant suppliers, accounting for 51.1 per cent of total imports in 1978 with the U.K. accounting for 43 per cent of the EEC share—an equivalent of 22.1 per cent of the overall total. Of other suppliers, the U.S.A. provided

Per cent of total imports in 1978, Japan 10.3 per cent and Iran 6.8 per cent. Imports from the EEC countries increased by 47.4 per cent in value terms in 1978 while those from U.S.A. increased by 34.9 per cent and from Japan by 3.5 per cent. Imports from Africa increased by 12.5 per cent while those from the Middle East declined by 18.5 per cent. Kenya is continuously increasing the range of its trading partners and imports from other countries and regions not indicated separately above rose from K£107.7 million to K£131 million between 1977 and 1978.

7.19. Kenya's exports by areas and principal countries of destination are set out in Table 7.12. The EEC countries and Africa continued to account for most of Kenya's exports taking 43.5 and 23.7 per cent respectively of the total in 1978. North America, the Far East and Australia, other western European countries and the Middle East were the other important trading areas. Ships stores and supplies to aircraft also accounted for a significant proportion of exports.

7.20. Details on trade with individual African countries are shown in Table 7.13. Overall exports to African countries dropped in value, from K£110.3 million in 1977 to K£93.9 million in 1978, a fall of 14.9 per cent while imports from Africa increased from K£8.2 million to K£9.2 million. Uganda continued to be the most important African market for Kenya's exports taking 40.9 per cent of the total though there was a decline in value of exports to Uganda which fell from K£52.0 million in 1977 to K£38.4

million in 1978. In 1976 value of exports to Tanzania at K£33.4 million had been virtually the same as to Uganda. Successive drastic declines following the border closure have, however, reduced the total to K£2.8 million in 1978. Thus in 1978, Rwanda became the second most important African market for Kenya products followed by the Sudan, Zambia and Egypt in that order. Excluding Uganda and Tanzania, exports to other African destinations have risen from K£30.3 million in 1974 to K£52.7 million in 1978. This diversification in export market in Africa seems likely to continue.

7.21. Imports into Kenya from other African countries were dominated by supplies from Tanzania up to 1976 but in the last two years the very sharp fall in supplies from Tanzania has had the effect of reducing total imports

from Africa by half. Of total imports from African countries of K£9.2 million in 1978, Rwanda was the largest suppliers, followed by Uganda, Zambia and then Mozambique.

Exports of Manufactured Products

7.22. The details given in Table 7.7 show that exports of processed products together with machinery, transport equipment and residual consumer goods increased in total value from K£124.2 million in 1974 to K£162.7 million in 1977 followed by a reduction to K£141.1 million in 1978. If processed petroleum products are excluded the totals are reduced to K£78.3 million in 1974, K£79.9 million in 1977 and K£72.4 million in 1978. There is a high proportion of processed products in Kenya's exports to other African countries while sales for bunkering of ships and aircraft are important in respect of exports of petroleum products. As stated in Chapter 10 exports of petroleum fuels fell in volume from 1,588,700 tonnes in 1974 to 1,173.300 tonnes in 1978, and in view of the increase in unit prices of other non-processed exports, the volume of these processed exports other than petroleum products has also fallen over this period. Thus it is difficult to see any evidence of an increase in the volume of exports of processed products from Kenya in the recent period. To a substantial extent this is due to the closure of the Tanzania border in 1977 and the disruption of normal trade flows following events in Uganda.

Outlook for 1979

7.23. In the last three years, imports have risen considerably, and the share of machinery and capital equipment in these imports has been rising steadily. The higher level of imports has been financed largely from additional revenues accruing from higher coffee and tea prices and a higher level of capital inflow into the country. With the fall in coffee production and the decline in average prices, export earnings from coffee and tea are expected to fall significantly in 1979. At the same time the net cost of imports of petroleum products is continuing to increase not only because of increases in prices of crude oil and falling export sales of petroleum products but also due to the fact that the substantial import of machinery and transport equipment in recent years is raising fuel consumption in the domestic economy. The resultant limitations in foreign currency will call for the continuation of import controls to reduce the level of imports which can be dispensed with compared with the peak levels of such imports in 1978.

7.24. The import and credit controls imposed in 1978 will, it is hoped, have a combined impact in 1979. Also since the high level of imports in 1978 contained an element of restocking the probability is that there will be a substantial reduction in 1979 in the record trade deficit experienced in 1978.

The actual deficit recorded will depend particularly on the effectiveness of the controls operated, the inflow of foreign resources and also on whether some further reduction in the country's foreign reserves can be tolerated.

Kenya External Trade Authority

7.25. During 1978, Kenya External Trade Authority undertook a number of ventures aimed at expanding Kenya's export markets and attracting investors. The most ambitious among them was the New York trade fair where various Kenyan manufactures were exhibited followed by a workshop to bring Kenyan and American financiers and industrialists together in order to discuss potential ventures.

7.26. The Authority also rendered advisory services to a wide range of industries including the formation of joint marketing groups for a number of small handicraft producers. Work was also undertaken to reduce the documentation connected with external trade in the relevant Government departments. In addition, the authority continued its work of assisting the Government in shaping the policies for export incentives.

CHAPTER 8—AGRICULTURE

After the very large rise in the contribution of agriculture at current prices to GDP in 1977, there was a substantial reaction in 1978 and a fall of 4.2 per cent was recorded.

8.2. This fall was basically a result of the reduction in realized prices of coffee and tea. Volume of marketed coffee fell back from the peak level of 97,066 tonnes achieved in 1977 to 84,328 tonnes while its value was reduced much more significantly from K£192.9 million to K£115.6 million. As for tea, while its marketed production went up from 86,291 tonnes in 1977 to 93,373 tonnes in 1978, receipts from sales of tea fell from K£92.7 million in 1977 to K£71.3 million in 1978. There were increases in value of marketed output of sugar cane and livestock products in particular but these did not compensate for the reductions in the two major products.

8.3. The value of sales other than through the marketing boards or directly to such bodies as the Kenya Meat Commission appears to have increased significantly in 1978. Maize sales through other commercial channels and animals slaughtered in private slaughter-house were probably at very high levels.

Value of Output and Contribution to GDP

8.4 The contribution of monetary agriculture to GDP as shown in Table 8.1 fell by 4.2 per cent in 1978 but at constant prices there was a rise of 1.4 per cent.

Marketed Production

8.5. The recorded volume of marketed production of agricultural output fell, as shown in Table 8.2, by 4.7 per cent, in 1978. The volume index numbers in the table, however, exclude maize sales other than to the Maize and Produce Board. The addition of such maize sales would have had a marked impact on the estimate of total marketed production in 1978. The purchases made by the Board were constrained by its storage problems. Output of temporary industrial crops rose by 14.4 per cent on account of a significant improvement in the production of sugarcane. Also the prices of temporary industrial crops rose by 12.8 per cent, and prices of livestock products went up by 31.4 per cent. Never-the-less due to a drop of 30.7 per cent in the prices of permanent crops, mainly coffee and tea, the overall price index fell by 17.2 per cent in 1978.

**Based on sale to Marketing Boards only.

8.6. As a result of these movements the value of gross marketed production as per details in Table 8.3 declined from K£415 million in 1977 to K£327 million in 1978. The 1978 figure was, however, still substantially above the value of gross marketed production of K£250 million recorded in 1976. The share of coffee and tea in the total marketed output fell from 69 per cent in 1977 to 57 per cent in 1978 while that of sugarcane and livestock products increased from 3 to 5 per cent and 12 to 19 per cent, respectively.

8.7. Table 8.4 sets out details on prices on individual products. The average Prices for coffee and tea, the most important export crops, declined considerably by 31 per cent and 29 per cent respectively, between 1977 and 1978. Prices of most other commodities, however, increased while the prices of maize and wheat remained unchanged. The steepest rise of 31 per cent occurred in the price of beef.

*These Prices are for calender year delivered and reflect actual payouts, although average prices for two seasons overlap during a calender year might have differed.

8.8. The proportionate share of the large and small-scale farmers in the marketed production moved in favour of the small farmers whose share rose from 50.3 per cent of the total in 1977 to 56 per cent in 1978. The decline in coffee and tea sales affected the receipts of large farmers more significantly than those of the small farmers. Also small farmers accounted for a large proportion of the increase in sales of other agricultural products, e.g. sugar-cane.

**Except Labour.

cent in the price of fuel and power accounts for much of the increase in the overall index. The value of inputs is given in Table 8.7. Three items—fertilizers, fuel and power and manufactured feeds accounted for 54 per cent of total inputs in 1978 and between them they were responsible for more than half the increase in the value of purchased inputs between 1977 and 1978. The value of inputs went up from K£60.55 million in 1977 to K£63.91 million in 1978, an increase of 5.6 per cent. The most significant increase in consumption of purchased inputs since 1974, however, occurred in 1977 when the value of these inputs went up by 38.3 per cent. The sharp increase was induced by the buoyant conditions in the industry and the large rise in output in that year.

Terms of Trade—Agriculture Sector

8.10. The terms of trade had moved strongly in favour of the agriculture sector in 1976 and 1977 following continued deterioration in the previous three years. The improvement resulted from substantial rises in prices of export crops, especially tea and coffee. Also 1977 was the peak year for these crops. However, the year 1977 was followed by declines in export prices in 1978. The rise in prices of domestically consumed crops and livestock products was more than outweighed by the slump in prices of export crops, resulting in an overall decline of 1.8 per cent in the index of prices of items sold by the agriculture sector in 1978. The index of prices of inputs purchased by the sector on the other hand rose by 7.5 per cent in 1978. This combined effect of a rise in prices paid, and a fall in prices received brought about an 8.5 fall in the sector's terms of trade in 1978. The details are noted in Table 8.8.

PROVISIONAL TERMS OF TRADE INDICES FOR AGRICULTURE

Table 8.8		1976=100	
		1977	1978

INDEX OF PRICES PAID.		109.4	117.6
Agriculture Sector Terms of Trade		109.8	100.4

8.11. In comparing Table 8.8 with Tables 8.2 and 8.6, it must be pointed out that the price indices given in Table 8.2 for marketed production related only to sales effected through marketing boards and similar agencies whereas the price index numbers for sales given in Table 8.8 cover all sales including those through other commercial channels. Thus while recorded marketed production was valued at K£250 million, in 1976 it excludes sales of about K£50 million which had been effected through other unrecorded commercial channels. The index on prices of inputs in Table 8.6 is based on the year 1972 whereas that in Table 8.8 is based on 1976. The increase in prices of fuel and lubricants between these two years had a varying impact on the respective weights of the two indices. As a result the index based on 1976 shows a lower overall increase between 1976 and 1978 than the index based on 1972.

Agricultural Credit

8.12. As indicated in Table 8.9 the amount of new credit made available to the agriculture sector by the major lending institutions—excluding the commercial banks, increased by 31 per cent from K£20.96 million in 1976/77 to K£27.47 million in 1977/78. The increase occurred largely in the loans provided by the Agricultural Finance Corporation under the Guaranteed Minimum Return Programme, mainly as a result of an increase in the provision of credit from K.Sh. 350 to K.Sh. 500 per acre. There was also some increase in the acreage covered under the programme. Credit provided by the Co-operative Bank increased only slightly. Large-scale farmers followed by co-operative unions and societies, were the main beneficiaries of the new credit in 1977/78. Their shares of total credit amounted to 49.3 per cent and 38.5 per cent respectively. Short-term loans accounted for about 71.4 per cent and 52 per cent of the total credit provided to the co-operative and large-scale farmers, respectively.

8.13. Commercial banks also increased their new lending to farmers by a further K£4.4 million from an increase of K£13.7 million between 1976 and 1977 to an increase of K£18.1 million between 1977 and 1978. Total credit to the agriculture sector by the commercial banks as shown in Chapter 4 had risen to K£72.5 million by the end of December 1978. However, it was still equal to only 14 per cent of their deposit liabilities compared to the target of 17 per cent set by the Government.

Crop Production

8.14. *Maize*.—Despite favourable weather conditions in the major maize growing areas, total maize production in 1978 fell below the level of output in the previous two years. The shortage of effective storage capacity of the Maize and Produce Board first observed in 1977 forced farmers to hold back maize from the 1977 crop up to the early months of 1978. This had a dis-

couraging effect on maize growers who curtailed the areas planted. Infact the sales of hybrid seed to large-scale farmers declined by 50 per cent between 1977 and 1978.

*Revised series.

8.15. Due to the lack of profitable export markets, purchases by the Maize and Produce Board during 1978 declined to the lowest level for many years. At 236,262 tonnes, the total was 44.3 per cent below the level of purchases in 1977 and 58.1 per cent below the level in 1976. As a result of the low prices in the world markets the Board could not export the surpluses which

were not required for domestic consumption. The cumulative stock of maize had increased to 3.7 million tonnes at the end of 1978. This amount was more than double the minimum strategic reserve level of 1.8 million tonnes.

8.16. Domestic sales by the Board dropped to 221,670 tonnes in 1978 some 19 per cent below the level of sales in 1977. It seems evident that farmers disposed of some of their production through market channels other than the Maize and Produce Board—mostly at prices below the price set by the Board for its purchases—the price at which sales were made being influenced by the local market conditions in the area concerned.

8.17. Purchases by the Maize and Produce Board should not be constrained by storage problems in 1979 as the Board's storage capacity has now been increased. The Board has plans to export some 100,000 tonnes of maize during the first half of 1979 and if these sales are made it would be able to purchase more maize from farmers than would otherwise have been possible. However, the recent reduction in the maize price to producers although justified in terms of the 1978 situation of very high level of stocks in storage and the low level of prices available on export markets, may have the effect of causing a further fall in maize production in 1979. This is by no means certain though, since farmers dependent to a large extent for their incomes on their maize sales, may seek to maintain total income by even higher offerings on the market.

8.18. *Wheat*.—As shown in Table 8.10, wheat production achieved a record yield in 1976. Since then output has declined to 165,941 tonnes in 1978, about 2.3 per cent below the level of deliveries in 1977. A decline in the area under wheat cultivation especially in the major wheat production districts of Nyandarua, Uasin Gishu and Trans Nzoia and a reduction in the average yield per hectare due to an increasing incidence of wild oats in wheat fields account for the fall in total output of wheat. Higher than average rainfall especially during the last two years which rendered the crop less resistant to disease has also been a contributory factor in the drop in average yield.

Table 8.10 MARKETED* PRODUCTION OF SOME MAJOR CROPS 1974 - 1978 *Tonnes*

Year					
Crop	1974	1975	1976	1977	1978

Tea	53,440	56,730	61,984	86,291	93,373

*Sales to Marketing Boards.

8.19. Domestic consumption of wheat flour has been increasing in the recent years as can be observed from the following series. As a result Kenya has had to import larger quantities of wheat to meet the deficits. A total of 90,000 tonnes of wheat were imported into Kenya during 1978 as compared to only 33,000 tonnes in 1977.

WHEAT FLOUR CONSUMPTION

<i>Year</i>	<i>Tonnes</i>
1974	128,669
1975	112,057
1976	136,488
1977	158,400
1978	184,733

8.20. It is currently estimated that wheat production would be increasing at an annual rate of one per cent in the next five years. During the same period consumption of wheat flour is expected to increase at a much higher rate of 7 per cent. Therefore, Kenya is likely to become increasingly a wheat importing country. The Government has already announced an increase in the producer price for the next wheat harvest with the aim of inducing farmers to plant more wheat. The recent decrease in producer price for maize is also likely to influence some maize producers to shift to wheat production in those areas capable of producing both crops.

8.21. *Coffee*.—The two year coffee boom which had reached its peak in early 1977, faded out in 1978. The combined effect of higher production and consumer resistance to the very high prices then prevailing, caused the boom to subside. The fall in prices between 1977 and 1978 was very substantial and the price received by farmers dropped from an average of K£1,938 in 1977 to K£1,370 in 1978. Production in 1978 at 84,328 tonnes was probably on par with that of 1977. The exceptional figure for deliveries of 97,066 tonnes in 1977 had included coffee grown in neighbouring countries. Coffee deliveries from co-operatives improved slightly to account for 56.6 per cent of total deliveries in 1978, while deliveries from estates decreased slightly.

8.22. The quality of Kenya coffee was much improved in 1978 and was in fact better than in the previous three years. Total coffee exports declined to 85,405 tonnes in 1978 from the level of 94,344 tonnes in 1977. The reduced figure, however, is still above the average for the last five years. Coffee exports earned K£124.8 million in 1978 as compared with K£204.4 million in 1977. West Germany continued to be the largest importer of Kenya coffee accounting for 30 per cent of the total coffee export sales. Other important customers included the Netherlands, U.S.A., Sweden and the U.K. Plans to increase coffee plantations especially on smallholdings are at an

advanced level. Some 33,000 to 35,000 hectares are to be planted with coffee, most of it during 1979, to mature ready for production towards the end of the current development plan period. As a result total area under coffee plantation would increase by 37 per cent.

8.23. *Tea*.—Production of tea has continued to increase since 1975. A total of 93,373 tonnes of manufactured tea was produced in 1978 compared to 86,291 tonnes in 1977 and 53,440 tonnes in 1974. Production over the last three years has benefited markedly from the higher than average rainfall in the major tea growing districts while prices have been sufficiently attractive to encourage maximum picking. Cash receipts to growers, however, fell by K£21.4 million from K£92.7 million in 1977 to K£71.3 million in 1978. The U.K. continued to be the largest importer of Kenya tea. Total export earnings from tea amounted to K£63.2 million in 1978 compared to K£71.8 million in 1977 and K£31.8 million in 1976. Smallholder tea production made a further advance in 1978. As shown in Table 8.11 the total area under small.

THE DEVELOPMENT OF SMALL-HOLDER TEA—TO 1977/78

Table 8.11

	Total Hectares at end of year	Number of growers at end of year	Average size of holding per grower in Hectares	Production of ready-made tea tonnes
1973/74	34,384	90,135	0.38	14,658
1974/75	37,205	97,337	0.38	16,118
1975/76	39,740	105,949	0.38	19,442
1976/77	43,636	115,648	0.38	27,720
1977/78	46,861	122,348	0.38	31,867

holder tea plantations rose by 3,225 hectares to 46,861 hectares while the number of smallholder growers also went up from 115,648 in 1977 to 122,348 in 1978. Smallholders produced 31,867 tonnes of made tea in 1978 as compared to 27,720 tonnes in 1977 and their output accounted for 39.55 per cent of total output of made tea in 1978. Smallholder tea production should rise substantially during the next few years. The target in the current development plan is an average increase of 8.4 per cent a year.

8.24. *Cotton*.—After some years of stagnation cotton production jumped to a record level in 1978. Total marketed production rose from 16,257 tonnes in 1977 to 27,190 tonnes in 1978, an increase of 67 per cent. This impressive achievement was the result of more extensive cultivation and the good weather conditions in the major producing areas. It is estimated that some 119,780 hectares were planted with cotton in 1978 as compared to 87,634 hectares in 1977. Kitui, Meru and South Nyanza districts accounted for the bulk of the crop.

8.25. Seed cotton prices have been increasing annually. The average price in 1978 had risen to K.Sh. 315 per 100 kg, an increase of K.Sh. 27 or 9 per cent over the 1977 price. The more attractive price together with a producer credit scheme for the purchase of seed, insecticides, spray pumps, etc., has helped boost cotton production substantially. The introduction of tractor hire services in cotton growing areas has also had a marked impact.

8.26. *Sugarcane*.—The very favourable weather conditions in the major cane growing zones in western Kenya and at the coast and attractive producer prices have helped to boost the sugarcane production during the last two years. As shown in Table 8.12 cane deliveries reached a new record level

SUGAR CANE PRODUCTION BY TYPE OF GROWERS, 1975-1978

Table 8.12 Tonnes

	1975	1976	1977	1978
Factory Estates ..	551,752	487,328	584,248	626,467
Large Farms	124,721	138,353	239,649	282,260
Small-holders	443,654	500,479	630,374	848,854
Co-operative Societies	326,562	332,603	278,345	351,079
Settlement Schemes	207,894	193,834	155,524	242,548
TOTAL	1,654,583	1,652,597	1,888,140	2,349,206

of 2.35 million tonnes in 1978, an increase of 24 per cent over the total for 1977. The increase occurred in deliveries from all sources, though the highest rise was registered in deliveries from settlement schemes which went up by 56 per cent. Deliveries from smallholders increased by 34 per cent and from co-operatives by 26 per cent. Factory nucleus estates recorded a relatively low increase of 7 per cent. However, they remained second to smallholders as the main source of cane in 1978.

8.27. Work is still underway on the major investment projects which were initiated in 1976 to expand the sugar industry. Construction of the Nzoia sugar factory in Bungoma District was completed and the mill started production during the fourth quarter of 1978. Construction of the sugar factory in south Nyanza is in progress and is expected to be completed before the end of 1979. while expansion of the sugar factory in Mumias is nearing completion.

8.28. Total production of mill-white sugar rose to 238,145 tonnes in 1978. With the substantial addition in capacity now being installed, Kenya will soon attain the level of self-sufficiency in meeting its demand for sugar. A total of 250,555 tonnes of sugar was consumed during 1978 including consumption of 27,000 tonnes for industrial use. It is estimated that the output of sugar will rise to 480,000 tonnes to be extracted from 4.5 million tonnes of cane by the year 1983. At this projected level surpluses will be available for export.

8.29. *Pyrethrum*.—The downward trend in production which set in in 1976 continued through 1977 well into 1978. A total of 114 tonnes of pyrethrum extract equivalent was marketed in 1978, a drop of 14 per cent below the 1977 level of 131.1 tonnes and 44 per cent below the record level of 203.9 tonnes in 1975. Measures taken by the Pyrethrum Marketing Board to encourage a recovery in production by the provision of high yielding seed varieties, more extension services and increased producer prices in the last few years seem to have had little effect. Deliveries of extract during November and December, 1978 have, however, shown a considerable improvement over the same period in 1977.

8.30. Producer price was increased by 30 per cent in the fourth quarter of 1978 and a guaranteed minimum price was also introduced. The average price paid to growers in 1978 for flowers amounted to K.Sh. 643 per kg of extract, 15 per cent more than the price of K.Sh. 559 per kg in 1977. The factory in Nakuru has been renovated and expanded to be able to process a much higher level of pyrethrum and the industry is now ready for a substantial recovery. Export prices rose by 26 per cent from K.Sh. 238.2 in 1977 to K.Sh. 300.3 in 1978 per kg of diluted extract. However, the lower level of sales meant that pyrethrum earned the country K£4.08 million in 1978 compared with K£4.98 million in 1977.

8.31. *Sisal*.—The Kenya sisal industry has been going through a stagnant period over the last three years. Production has fallen and world market prices have been deteriorating mainly as a result of stiff competition posed by synthetic fibres. Kenya's sisal production declined by 5.2 per cent from 33,196 tonnes in 1977 to 31,456 tonnes in 1978 while the producer price fell from K£149 per tonne in 1977 to K£136 per tonne in 1978. Sisal exports which had reached the high level of 72,074 tonnes in 1974 have fallen progressively and despite a small recovery amounted to only 26,648 tonnes in 1978. The realised export price was K.Sh. 303 per 100 kg in 1978, as compared to the price of K.Sh. 470.50 in 1974.

8.32. *Horticulture*.—Exports of horticultural products as shown in Table 8.13 rose to 21,007 tonnes in 1978, an increase of 11.5 per cent over the

EXPORT OF FRESH HORTICULTURAL PRODUCE, 1974-1978

1977 .	18,844	6,435,815
1978 .	21,007	7,987,850

1977 level. Total earnings as a result went up by 24 per cent to reach a record level of nearly K£8 million. There were substantial increases in exports of avocado pears and cut flowers. The previous fast growth in sales of fresh pineapples and brinjals was affected adversely by the increases in air freight charges. The U.K. continued to be the major market for horticultural products accounting for 46.2 per cent of the total exports. West Germany which had a share of 20.8 per cent of exports was second. These two countries increased their imports of horticultural products from Kenya by 16 per cent and 18 per cent, respectively in 1978. Lack of cargo space continues to hinder the more rapid expansion of horticultural exports.

Livestock Production

8.33. Most parts of Kenya have benefited from the above-average rainfall in 1978. Grazing condition for livestock improved considerably and water supplies were generally abundant. Such conditions were extremely favourable for the improvement in production of livestock. As shown in Table 8.14, total

*Including sales licensed by the Kenya Dairy Board.

recorded milk production reached its highest ever level of 269.8 million litres. This was 10.3 million litres or 4 per cent above the 1977 record production of 259.5 million litres. The Kenya Co-operative Creameries processed 185.6 million litres of wholemilk and cream, 28 million litres or 18 per cent above the level processed in 1977. Sales of liquid milk especially increased substantially by 76 per cent in 1978 and accounted for 24 per cent of total liquid milk sales. Nanyuki, Kisumu and Machakos continue to be

the main market areas for this product. It is anticipated that wholemilk sales will increase rapidly as a result of the recent introduction of a school milk programme by the Government.

8.34. Total deliveries of cattle to the Kenya Meat Commission dropped to the lowest level ever in 1978. The 1978 intake was only 68,000 head which was less than half the number delivered in 1977 and one third of the 1976 total. This fall is the result of the competition the Commission has been facing from the mushrooming number of private slaughter houses in the country. There is no indication, however, of total combined intake both by the Commission and private sector having fallen. Indeed given the rise in total consumer incomes there is likely to have been an increase. The Commission has not been able to pay competitive producer prices partly because of cash flow difficulties. As a result many producers have accepted the more attractive prices paid by the private abattoirs.

8.35. Despite the fall in cattle deliveries, there was a marked improvement in intake of small-stock, i.e. sheep, lambs, goats by the Commission during 1978 as compared to 1977. The total intake of such stock rose to 21,068 head an increase of 23 per cent above the 1977 level. The increase in deliveries occurred mainly in the chief small-stock grazing areas of Samburu, Marsabit, Laikipia and Garissa districts.

8.36. There was no change in the total intake of pigs by Uplands Bacon Factory in 1978 as compared to the intake in 1977. Almost 40,000 pigs were delivered for slaughter in 1978. Nyeri District continued to be the major supplier accounting for over 40 per cent of the total deliveries. About 60 per cent of the supply originated from private farmers with the remainder shared between the farms run by Agricultural Development Corporation and establishments owned by the Uplands Bacon Factory. Some 10,727 pigs were also slaughtered by licenced private butchers other than Uplands Bacon Factory.

Agricultural Development Services

8.37. *Training.*—The number of personnel trained in agriculture has been progressively increasing in recent years. As shown in Table 8.15 the total number of students enrolled for degree courses at the University of Nairobi increased by 69 in 1978. It is expected that 154 students will graduate during the current academic year, 86 with a degree in the agricultural science and 68 with a degree in veterinary medicine. Enrolment of students at the agricultural training institutes is also indicated in Table 8.15. The intake for Egerton College which trains students for diploma courses was unchanged in 1978 while the intake of the Animal Health and Industrial Training Institute went up by 9 per cent in 1978. There was a drop, however, in the number of students admitted by the agricultural institutes at both Bukura and Embu as well as the Naivasha Dairy Training School.

*Includes short courses of 1—2 weeks.

**Includes short course seminars.

8.38. A survey conducted by the Ministry of Agriculture during 1978 revealed acute shortages of manpower skills in agriculture at all levels. As a result the Government is to embark on plans to improve the quality and the volume of training facilities. These plans include construction of a new agricultural institute, capable of taking 600 students, at the coast, and expansion of existing agricultural institutes, the Egerton College and the two faculties at the University of Nairobi. These latter intend to offer degree courses in agricultural education and range management.

8.39. *Irrigation.*—Two types of irrigation schemes are being operated at the moment; the large-scale schemes planned, developed and managed by the National Irrigation Board; and the small-scale schemes which are managed by the Land and Farm Management Division of the Ministry of Agriculture.

8.40. Details on the performance of the large schemes are set out in Table 8.16. There was a decline in the overall performance of the six large schemes during 1978 as compared to 1977. The total area cropped decreased from 8,728 hectares in 1977 to 8,607 hectares although the number of plot holders increased by 160. The receipts of large schemes also declined from K£2.88 million in 1977 to K£2.66 million in 1978, a fall of 7.6 per cent. This was mainly because of the poor harvest of paddy from the Ahero, Bunyala and West Kano scheme areas. These schemes were hit by pests and diseases resulting in an extremely low per hectare paddy yield of only half the amount obtained by the farmers in the Mwea scheme area. As a result paddy production fell from 43,638 tonnes in 1977 to 38,039 tonnes in 1978, a decline of 12.8 per cent.

8.41. Further development of small-scale schemes has continued in 1978. The establishment of two new schemes at Kibirigwi and Ishiara was completed during 1978. The two schemes cover 100 and 32 hectares respectively and are together expected to accommodate 300 families. Feasibility study on the development of a scheme in Muka Mukuu in Machakos District is nearing

completion. This scheme is planned to cover 500 hectares and will help build up rural incomes in the area. In addition, studies have also been initiated to establish the feasibility of developing a scheme at Mitingu in Meru District, to cover 218 hectares and also of expanding the Bura Scheme in the lower Tana region, the first phase of which is to cover nearly 900 hectares. In fact, the Bura Scheme is expected to become the largest in the country covering nearly 20,000 hectares out of 40,000 hectares in the lower Tana River area which have already been identified for the project. Plans are also under consideration to drain the Yala Swamp to turn the area into an irrigation scheme and the multipurpose Masinga Dam project will eventually irrigate some 40,000 hectares in Upper Tana River area.

8.42. *Agricultural Research.*—Most of the research activities in agriculture in 1978 were centred on ongoing programmes. Work continued on the research in dryland farming being conducted at Katumani Station. This programme which is dealing with a wide range of problems now incorporates pre-extension trials. Progress was also reported on the research being conducted on sorghum and millet. This project was originally conceived as a means of contributing to development of forage in high dry areas of the Rift Valley but is now primarily concerned with research into grain production for human consumption in the dryland farming areas and in western Kenya. The research project on cropping systems is investigating crop relationships in dryland farming areas and is expected to produce data on conditions most

suited to different crops and varieties. The grain legume projects has expanded the scope of its work to cover different zones during 1978. Substantial progress was also likewise reported on horticultural crop research and pasture improvement, range management, etc. The Ministry of Agriculture now directly finances research undertaken at the University of Nairobi and Egerton College. This is to ensure that research priorities and designs are directly related to the needs of small farmers and that research recommendations are adequately tested. The organization of different research services was also reviewed during 1978 with a view to incorporating the research services run by the late East African Community into a single research organization to be known as the Kenya Agricultural Research Institute. The institute is to be established in 1979.

Land Adjudication

8.43. A total of 276,000 hectares were registered during 1978. As per figures in Table 8.17 the total of registered land now adds up to 5.22 million hectares. The Rift Valley Province continues to be the major centre of

PROGRAMME OF LAND REGISTRATION AND ADJUDICATION BY PROVINCE AS AT 31ST DECEMBER, 1978

Table 8.17

adjudication activities. Adjudication work in Western Province is almost finished and is expected to be finalized during the first half of 1979, making it the second rural province after Central Province, to have achieved complete adjudication.

8.44. As shown in Table 8.18 over 89,000 hectares of additional land was registered in Narok District during 1978. Kajiado, Kwale and South Nyanza districts followed with 35,000 hectares, 31,700 hectares and 23,200 hectares respectively. Adjudication work has also been resumed in Laikipia District, an area of predominantly large scale ranch land. Adjudication work is expected to commence in Tana River, Garissa, Wajir, Mandera, Isiolo and Marsabit districts during the current plan period. The target is to register 8.41 million hectares by 1983.

CHAPTER 9—NATURAL RESOURCES

Kenya is endeavouring to secure maximum benefits through controlled development and exploitation of its natural resources. This objective is to be attained through careful exploitation of mineral resources, better management of water resources, controlled cutting and replanting of forests and optimum exploitation of fishery resources. All these resources if properly exploited will contribute to long term development, the creation of employment and directly or indirectly to enhanced foreign exchange earnings of the country. The discussion in this chapter lays emphasis on development in 1978 and also details the plans for the period 1979 to 1983.

Water

9.2. The 1979.1983 Development Plan has adopted "Alleviation of Poverty" as its main theme and since it is recognized that in Kenya, adequate water supplies are a major constraint to national development and higher production from agriculture, water has been given priority in the whole field of development. The Ministry of Water Development is expected to play a significant role by making piped water more readily available in the rural areas and in harnessing more of the country's water resources to increase their availability for agriculture. The Government over the current plan period has allocated K£200.1 million for water development, two and a half times the total of K£80.3 million allocated in the previous plan period 1974.1978. Bulk of the expenditure is earmarked for rural water supplies, the Tana River Development Authority and Mombasa and coastal water supplies. However, a further K£97 million has been earmarked for development of a whole range of other water based projects.

9.3. Phase 1 of the National Master Water Plan for Kenya which was expected to provide detailed information on the availability and reliability of the country's water resources and an assessment of the country's irrigation and hydropower potential was completed in March, 1979. Phase II will provide the Government with a comprehensive report on orderly phased river basin water development programmes and contain information on all major water projects which have been assessed to the prefeasibility levels. Work on Phase II is expected to begin shortly. Planning will cover ten, twenty and thirty year periods. Large scale multipurpose water projects already identified will be examined to assess their viability and to ensure that they yield lasting benefits to the nation.

9.4. The programme targets to 1983 include—

- (i) the expansion of the coverage of improved water supplies in areas to serve 4 million people by 1983;
- (ii) serving approximately the same number of people in urban areas;
- (iii) increasing substantially the effort applied to water conservation;

- (iv) expanding activities in areas prone to floods and drainage of swamps and river valleys;
- (v) expanding the use of water in irrigation schemes throughout the country.

9.5. Table 9.1 details the total public expenditure on water development and related services incurred by the Central Government and other public authorities during the period 1974/75 to 1978/79. There was an increase in 1978/79 of nearly K£1.2 million or 3 per cent and total expenditure rose to K£41.1 million. Growth in 1978/79 could not match the threefold rise in expenditure on water development in the preceeding year. Water development expenditure now seems to be settling down to the figure of an average of K£40 million or more a year earmarked in the current development plan. The expenditure on rural water supplies in 1978/79 will amount to K£6 million compared with K£4 million in 1977/78, while expenditure on Sabaki River project will fall from the peak level of K£12.2 million in 1977/78 to K£8.6 million in 1978/79. Expenditures on Tana River development are more or less constant with K£11 million spent in 1977/78 compared to K£10.8 million scheduled to be expended in 1978/79.

DEVELOPMENT EXPENDITURES ON WATER SUPPLIES AND RELATED SERVICES, 1974/75-1978/79

Table 9.1

TOTAL ..	6,413	11,508	13,265	39,914	41,086

*Provisional.

9.6. As at March, 1979 nearly K£23 million had been spent on the Sabaki River project with an additional K£2.5 million to be spent between March and June, 1979. The construction of tanks and reservoirs is already completed and most of the main pipeline is now in place. This project is now expected to be ready by early 1980. When finished it will have cost more than K£30 million. The Sabaki River water supply will considerably alleviate water shortage in Mombasa and the adjacent areas.

9.7. The Tana River basin occupies 20 per cent of the land mass of Kenya and optimal utilization of its water resources is essential for the development of the whole country. The Tana River Development Authority

established in 1974 has the responsibility for developing long-range plans for effective utilization of the basin's water resources. The authority's major achievement to date has been the construction of the Upper Reservoir. It has been designed to regulate the water flow which can vary very substantially from year to year. The entire project is expected to be completed in 1981 at a total cost of K£52 million.

9.8. Attention is now being focused on the ways in which the controlled water resources of the Tana River basin can be tapped and developed. Large scale hydro. electric projects such as Kindaruma, Kamburu and Gitaru are to be complemented by other developments. The large-scale Phase I irrigation project—another development taking place in the Tana River basin is reported separately in Chapter 8. The Massinga Dam built for the Upper Reservoir will have a direct bearing on the scheme of the same name to provide water for irrigation of 40,000 hectares and offering employment opportunities and enhanced incomes to thousands of local inhabitants.

9.9. The rural water supply development programme covers both the development of rural water supplies by the Government and by the people themselves through self-help efforts. Table 9.2 shows by province the physical distribution of rural water projects which are operational or expected to be operational by June, 1979. The capital expenditures so far committed for the development of rural water schemes are also indicated. As can be seen six more schemes are expected to be operational by June, 1979 as compared to the number which were operational in June 1978. The total cost of 108 schemes by June 1979 will, it is estimated be K£12 million compared with K£9.6 million for the 102 schemes in June 1978. It is intended that all rural dwellers will in the long run be provided with clean potable water by the year 2,000. Increasing annual subventions have been earmarked for this purpose in the current development plan.

TOTAL	99	7,587	102	9,571	108	11,961

*Provisional.

9.10. For a long time, ground water in the country has been explored on a localized basis with the object of drilling successful boreholes. It is now intended to broaden the field of study so that different and various aquifers may be identified. A total of 94 boreholes were drilled in 1978 out of which 84 boreholes were successful. The highest yields were realized in areas with volcanic formations. Thus at Naivasha yields were 112 cubic metres an hour as compared to 23 cubic metres in the metamorphic areas. The Ministry of Water Development and the Range Division of the Ministry of Agriculture are currently involved in exploring the ground water potential of the North. Eastern Province as part of range water development.

9.11. Activities on water conservation during 1978 were concentrated in the range districts of Wajir and Garissa as well as in the Garba-Tula grazing block in Isiolo District. During the year, 9 dams were constructed with a total water storage capacity of 108,960 cubic metres. Three of these dams were constructed in Isiolo District with approximately 60,000 cubic metres capacity. Three other earth dams were constructed in Kitui and two in Machakos districts and in addition three spring protections with pipelines and reservoirs were erected in the Taita/Taveta District at the Coast.

9.12. The Ministry of Water Development has a Water Quality Laboratory which undertakes 20,000 determinations per annum. In 1978 the laboratory was chosen as the training venue for the first FAO/SIDA training course on aquatic pollution on the African continent. As a result of the efforts made by the Ministry's staff, several new industrial complexes have installed high quality waste water treatment plants. However, it has not yet been possible to enforce the laid down standards because of lack of adequate trained personnel.

9.13. The Water Development Training School which trains sub-professional level staff has increased its yearly intake from 115 trainees in 1978 to 185 in 1979. By April, 1979 the cumulative number of students had risen to 800. The training school has now reached a point where it cannot absorb any further increase in the number of students. Funds have therefore been made available for the construction of a new school with a capacity intake of 500 students per year. The World Health Organization has also worked on a plan for the establishment of a Water Engineering Institute for Africa in Nairobi. These developments will ensure an adequate supply of trained and specialized manpower for the Ministry of Water Development to help it develop, maintain and operate the proposed numerous water projects.

9.14. As part of the 1979-1983 Development Plan, the Ministry of Water Development is to embark on rehabilitation and eventual takeover of all schemes operated by the county councils. The programme involves replanning and reconstruction of water schemes that no longer function at their full Potential level. The Government has allocated K£7 million for this purpose

to be spent during the current development plan period. Over 40 such schemes will have been rehabilitated during 1978/79. Majority of these schemes are in the Rift Valley Province.

9.15. The very comprehensive Government programme for water development is supplemented to some extent by private activities. Many private applications to the Water Apportionment Board for supplies list domestic use as one of the reasons for wishing to abstract water. Minor irrigation, is, however, also stated as a secondary cause on 80 per cent of the applications. It is now intended that private sector efforts should be better integrated into the development programme of the public sector.

Forestry

9.16. The establishment and maintenance of vegetative cover on both private and public land especially in the more arid parts of the country is the main objective of forest development during the current development plan period. Such a measure would ensure the ultimate goal of satisfying the growing demand for timber for domestic and industrial needs as well as controlling soil erosion and protecting water catchment areas.

9.17. A further 6,317 hectares were planted to trees during 1978 thus bringing the total area under forest plantation to 158,900 hectares. This progress though short of the planned annual target of 7,600 hectares, was better than the results achieved in 1976 and 1977. Turbo Afforestation Scheme to feed the pulp and paper mill at Webuye and the Rural Afforestation Scheme currently covering 36 administrative districts accounted for a large portion of the new areas planted with trees during the year. Table 9.3 gives details on progress of forest plantation since 1974.

FOREST PLANTATION AREA, 1973-1978

*Provisional.

9.18. The relatively wet weather conditions in the last two years have helped minimise forest losses arising from fires. Only 607 hectares—11 hectares of plantation forests and 596 hectares of natural forests were destroyed in 1978 as compared to a total of 2,688 hectares which were destroyed in 1977.

9.19. Details of sales of forest products during 1978 together with figures for the previous years are shown in Table 9.4. Despite difficult weather conditions in the last two years, total timber sales have been on the increase since the fall recorded in 1976. The volume of timber sales in 1978 increased to 475,000 cubic metres, 41,000 cubic metres above the 1977 figure rates of 434,000 cubic metres. While hardwood sales declined, sales of softwood recorded impressive increases reflecting the high domestic demand. There was also a slight improvement in sales of fuelwood but charcoal sales dropped further to 38,000 stacked cubic metres. It seems certain that the Government's measures to curb indiscriminate felling of forests for charcoal burning are having their desired effect.

SALES OF FOREST PRODUCTS, 1973-1978

*Provisional.

9.20. Performance of the forest-based industries in 1978 reflects the growing industrial utilization of timber. Some 1.1 million square metres of fibreboard, 6,000 tonnes of chipboard and 5.1 million metres of plywood were produced in 1978. The pulp and paper mill at Webuye manufactured 49,934 tonnes of paper, board and pulp in the year. This mill is by far the largest consumer of raw forest products in the country.

Fisheries

9.21. Fish landings from both fresh waters and marine waters registered an increase in 1978 as compared to 1977 landings. The total volume of fish landed from fresh waters rose to 41,760 tonnes an increase of 14 per cent. Most of the increase occurred in the amount of landings from Lake Victoria. The yield from Lake Turkana the other significant source of fresh water fish was almost unchanged. After the large increase in 1976, fish landings from lake Turkana have remained constant in the last two years. The volume of yield from marine waters went up more modestly by 6.7 per cent in 1978 as compared to 1977. The total value of fish landed increased from K£2.9 million in 1977 to K£4.3 million in 1978.

9.22. The recent extension of the economic zone to 322 kilometres or 200 nautical miles into the Indian Ocean has enhanced the potential of deep fish resources significantly. The Government is planning to encourage joint fishing ventures in partnership with enterprises from abroad. The Government has also acquired a vessel to be used for assessment of fish stocks. A joint research programme is also to be sponsored by the FAO with the other governments participating to undertake investigation of the Indian Ocean covering the area from Madagascar to the Gulf of Aden.

Mining

9.23. The value of total mineral production in Kenya was virtually unchanged in 1978 at around K£8.8 million. Production of soda ash went up and its sales value rose from the low 1977 figure of K£2.64 million to K£3.68 million in 1978. Production of fluorspar appears to have declined in 1978 although this was compensated for by an improved yield from export sales as a result of an increase in its price of K£5.1 per tonne to K£29.9 per tonne. Output of limestone products and salt slightly declined in value compared with 1977. Both local and foreign companies and individuals have shown a keen interest in mineral exploitation.

9.24. The total output of gemstones was valued at K£495,740 in 1978. Most of these gemstones were found in the gemstone belt in the Taita/Taveta District while a small amount originated in the West Pokot District. These two areas provide 75 per cent of all gemstones produced in Kenya.

VALUE OF MINERAL PRODUCTION, 1974 -1978					K£'000

*Provisional. **Export value.

9.25. There was very little activity in the field of oil exploration in 1978 due to the withdrawal of the companies which were exploring for oil in Eastern, North.Eastern and Coast provinces. However, an airborne geophysical survey was completed in the early part of 1978. The survey covered 34,000 square kilometres both in the Coast and certain selected parts of western Kenya. Follow.up activities to this survey have been initiated with the aim of locating areas which may have base metal deposits as well as uranium. The Mines and Geology Department of the Ministry of Natural Resources is also carrying out a detailed geological survey and evaluation of non-metallic deposits that constitute 90 per cent of the country's mineral wealth. Work on a project to undertake regional geological mapping with multi-purpose objectives commenced in 1978.

9.26. The geological survey work will in the current plan period be followed up by further exploration activity concentrated on possible location of base metal deposits especially iron ore, gold and silver in western Kenya, and known mineral occurrences in the coast area. Also increased emphasis is being placed on the exploration of energy materials such as coal and uranium. This latter will be closely related to the geothermal exploration programme.

CHAPTER 10—ENERGY

Overall consumption of energy in the country rose by a further 6 per cent in 1978 as compared to an increase of 4 per cent in 1977. The increase in 1978 can be attributed to the expansion of existing industries and construction of new ones as well as to general economic growth. The increase has occurred mainly in consumption of electric energy while consumption of oil products, the other main source of energy, went up marginally. On a per capita basis consumption of energy was 2 to 3 per cent higher in 1978 as compared to 1977. The comparison below shows, in index number form, the growth in monetary GDP and consumption of energy with consumption of oil separately identified.

	<i>Growth in Monetary GDP</i>	<i>Increase in Consumption of Conventional energy*</i>	<i>1972 = 100 Increase in Consumption of Oil</i>
1973 ..	107	107	105
1974 ..	109	108	105
1975 ..	112	111	108
1976 ..	118	122	121
1977 ..	128	127	125
1978 ..	136	135	129

*Oil, electricity and coal and coke.

10.2. The figures above indicate that the increase in monetary GDP and the growth in consumption of energy appear to have a one to one relationship. This relationship can be attributed to the close ties which the modern economy has with the use of conventional sources of energy. GDP has, however, increased at a faster rate than the growth in consumption of oil products. This is due to the lagged effect of price rises, that have occurred since 1973, on the consumption of oil. Without a structural change of any significance the critical relationship between oil consumption and growth in GDP does never the less continue to have a crucial impact on the country's balance of payments.

Oil

10.3. Oil is the major source of conventional energy in the country. Despite the lower growth rate in its consumption in relation to monetary GDP and to total consumption of energy, it accounted for more than 80 per cent of total energy consumed in 1978. Its share of total consumption in 1977 was 85 per cent. The decline can be attributed to the installation of additional capacity for generation of hydroelectric power which was added to the system in 1978. As a result the share of hydro and thermal electricity in the total consumption of energy has increased from 12 per cent in 1977 to 5 per cent in 1978. Coal and coke account for about 2 per cent of the

remainder. The non.conventional sources of energy, i.e. fuelwood and charcoal, which serve 90 per cent of the total population are excluded from this comparison. If they were included the relative share of oil in total consumption of energy would be significantly reduced.

10.4. The modern sector of the economy in Kenya, however, relies very heavily on oil as a major source of energy, and it has been adversely affected by price increases and an insecure supply position for the last few years. The troubles in Iran in 1978 and 1979 led to shortages of aviation spirit early this year which affected the tourist industry as many light aircraft used by tourists for travel within Kenya were effectively grounded. The recent fare increases on international air routes have been forced on the operating airlines by the oil price rises already announced this year. Such fare increases will further hit the Kenya tourist industry.

10.5. Table 10.1 shows that total imports of crude petroleum fell by 7 per cent, from 2.55 million tonnes in 1977 to 2.37 million tonnes in 1978 while their value decreased by 8 per cent from K£100.16 million in 1977 to K£92.34 million in 1978 indicating a fall in the unit price of K£0.3 per tonne from K£39.3 per tonne in 1977 to K£39 per tonne in 1978. As a result of technical problems at the Mombasa oil refinery in the first part of 1978 imports of refined fuels increased from 105,000 tonnes valued at K£8.27 million in 1977 to 258.000 tonnes worth K£16.90 million in 1978. On the whole the total bill for imports of oil products went up from K£115.42 million in 1977 to K£115.95 million in 1978.

10.6. The fall in coffee prices on the international market affected the foreign exchange position of Kenya's export markets for its oil products. The share of exports to Uganda which suffered a critical shortage of foreign exchange, dropped significantly from 28 per cent of the total of Kenya's exports of oil products in 1977, to 22 per cent in 1978. There was also decline, though of a lesser significance, in exports to Rwanda, Burundi and Zaire. Sales for ships bunkering too fell. As a result both the total quantity and value of petroleum products exported to all destinations declined by 14 per cent from 1,365,000 tonnes in 1977 to only 1,173.300 tonnes in 1978. There was a corresponding drop of 17 per cent in value of exports of all oil products from K£83 million in 1977 to about K£69 million in 1978. There has been a consistent decline in the value of exports of oil products from Kenya since 1973. The net cost of oil products has as a result risen from K£1.1 million in 1973, to K£48.9 million in 1978. It seems likely that the net deficit will rise further in 1979.

10.7. The trade in oil products is not the only major cause of instability in Kenya's balance of payments on its external merchandise account. It is, however, a contributory factor to the widening of the deficit in the current account of its balance of payments since 1973. Kenya has had an average

Table 10.1

deficit of K£39 million per annum, on trade in oil products, between 1974 and 1978. This is an equivalent of 31 per cent of the total annual average deficit of K£126 million on merchandise account.

10.8. Prior to 1973 the refinery at Mombasa exported about 55 per cent of its output at prices which helped cover the production costs of the refinery. The relative decline in importance of the export markets is only partly due to higher domestic demand and can mainly be attributed to changed trading conditions in these export markets. As a result exports in 1978 were down to 41.4 per cent of the output of the refinery. This has had a big impact on the net cost of consumption of oil products in Kenya. The decline in exports of the oil refinery products as shown below has been a consistent one and it seems that this trend of a decline in the relative proportion of exports is likely to continue, as a result of the 15 per cent rise in oil prices announced by OPEC in the first part of 1979.

Sales of Mombasa Oil Refinery Products

*Liquified petroleum gas

petroleum gas, whose price in 1978 was about 1.6 times that of 1973, the prices of rest of the major oil products, power kerosene, fuel oil, light diesel oil, motor gasoline, illuminating kerosene have risen by 2.6 to 3.3 times between 1973 and 1979.

10.10. As shown below retail prices of petroleum products rose only once during 1978 by 5 per cent as compared to a total rise of 13 per cent in 1977. There were further increases of 8.6 to 11.5 per cent in April 1979. The world market for crude petroleum continues to be influenced by political events and while it is difficult to be precise about the immediate outlook, the long-term trend in prices seems likely to continue upwards. Many countries have already adopted policies to economise on consumption of petroleum products and it is hoped that these measures can begin to have some impact on total demand thus reducing the effect of market influences as a factor leading to increased prices.

*Excludes lubricants.

**Liquified petroleum gas.

10.11. Table 10.3 indicates that the total volume of refinery throughput has fallen by 9 per cent since 1974. The fall actually occurred in 1976 but since then the throughput has been stable and the Mombasa refinery has been working at 65 per cent of its operational capacity. Present plans do not envisage any increase in capacity but yields should be improved as a computerised process supervisory system and a secondary processing unit become operational. The largest fall in production since 1974 has occurred in the output of fuel oil and export residues which are the cheaper products. Output of motor gasoline and lighter Diesel oil has increased while production of illuminating kerosene and jet fuel, has risen slightly despite the substantial falls in 1976 and 1977.

10.12. Sales of petroleum products for domestic consumption, as shown in Table 10.4 rose by 2 per cent from 1,502,900 tonnes in 1977 to 1,537,900 tonnes in 1978. There has been a consistent upward trend in domestic

*Includes sales to foreign airlines at airports in Kenya.

**Adjustment for inventory changes and losses in production.

consumption of petroleum products since 1974. The total domestic sales of petroleum products in 1978 was 24 per cent higher than in 1974. Total sales will be influenced in the current plan period by the Government's intention to introduce ways and means of conserving energy. This should have a particular impact on the growth in the use of petroleum products which as already indicated is a potent source of balance of payments problems.

10.13. Most of the increase in consumption in 1978 occurred in sales of motor spirit, jet fuel, illuminating kerosene and light diesel oil, while there was a decline of nearly 10 per cent in sales of fuel oil reversing the trend of increased sales which had been prevalent since 1975. The most significant increases were recorded in sales of lighting kerosene and jet fuel. The volume of sales of these two products rose by 21 and 13 per cent respectively. The shortage of charcoal which had occurred in 1977 and led to rises in its prices continued into 1978. This accounts for the increase in sales of kerosene which has been adopted as substitute fuel especially by low income householders. The rise in sales of jet fuel can be accounted for by the opening of Mombasa airport to international airlines on direct flights from other areas of the world. Sales of motor spirit have risen by 29 per cent since 1974 with particular significant rises of 12.2 and 7.5 per cent being recorded in 1977 and 1978 respectively. Sales of light diesel fuel have similarly increased by nearly 30 per cent since 1974 with substantial rises being also recorded between 1976 and 1978. The overall petroleum supply and demand balance sheet given in Table 10.4 illustrates the trends in domestic consumption and exports of petroleum products and their net effect on total demand, which in 1978 was reduced by 4.6 per cent.

Electricity

10.14. Hydro-electricity together with fuelwood and charcoal are the only primary domestic sources of energy. The geothermal plant, now under construction, when commissioned in mid.1981 will be the other major source.

INSTALLED CAPACITY AND GENERATION OF ELECTRICITY, 1974-1978

Table 10.5

	INSTALLED CAPACITY* MW**			GENERATION*GWH+		
	Hydro	Thermal	Total	Hydro	Thermal	Total
1974	139.1	145.1	284.1	547.1	322.6	869.7
1975	139.1	144.0	283.1	649.1	322.2	971.2
1976	171.4	181.7	353.1	583.2	574.7	1,157.9

1978	311.5	171.6	483.1	1,072.8	308.9	1,381.7

*Includes estimates for industrial establishments with generation capacity.

**1 megawatt=1 million watts=1,000 Kilowatts,

+ 1 gigawatt hour= 1,000,000 kilowatt hours.

Table 10.5 indicates that the total installed generating capacity for hydro and thermal electricity rose by 35 per cent from 356.4 MW in 1977 to 483.1 MW in 1978. The bulk of the increase in 1978 is accounted for by the commissioning of 145 MW hydro generation capacity at Gitaru in July, 1978. Additional capacity to generate a further 40 MW of hydro and 30 MW of geothermal electricity—raising the level of total capacity to 550 MW, is expected to be commissioned in 1982 and 1983, respectively. In the long run, as per the figures detailed below the increase in supply of electricity to meet the anticipated high growth in demand is scheduled to be secured by harnessing the country's potential for hydro electricity and thereafter increasingly by making use of the geothermal resources.

Projected Supply Potential and Demand, 1983-2000(Megawatts)

	1983	1988	1993	2000

Surplus/deficit ..	268	253	353	—167

10.15. Although variations in rainfall have had some impact on hydro. electricity generated, the growth in output since 1974 has generally been related to the additions to capacity. The amount of hydro-electricity generated, rose from 407.7 Gwh in 1973 to 649.1 Gwh in 1975 and then dropped to 583.2 Gwh in 1976 due to drought during that year. Good rainfall in 1977 and the additional capacity installed in 1976 raised output to 749.3 Kwh in 1977 to be boosted still further in 1978 by the additional capacity that came on stream in the middle of that year. As a result while the total of electricity generated rose by 24 per cent from 1,113.3 Gwh in 1977 to 1,381.9 Gwh in 1978, the volume of hydro power generated increased by 43 per cent as compared to a rise of 28 per cent between 1976 and 1977. Consequently despite the drop in generation of the thermal power, the proportion of electricity generated domestically has risen from 82 per cent in 1976 to 86 percent in 1978.

10.16. Table 10.6 indicates that total consumption of electricity rose from 995 million Kwh in 1974 to 1,370.5 million Kwh in 1978. an increase of 37.7 per cent, at an average rate of 7.6 per cent per annum. The highest percentage increase was recorded in consumption of electricity for domestic use which rose by 60 per cent from 205.6 million Kwh in 1974 to 328.5 million Kwh in 1978. Demand for industrial use rose by 33 per cent from 532.7 million to 710.4 million Kwh during this period while consumption by commercial and light industrial enterprises increased by 30 per cent from 246.6 million Kwh in 1974 to 321.2 million Kwh in 1978.

Net generation	843.8	931.8	1,080.2	1,085.5	1,356.7

*Imports from Uganda.

10.17. The development in generating capacity for electricity has been undertaken in anticipation of the potential demand which is expected to be high. A new power station was commissioned at Marsabit in 1978 and the power station in Mandera was nearing completion. In addition work on extension of supply to Isiolo and Vihiga is nearing completion. The Government plans to spend an estimated K£4.2 million on rural electrification during the current plan period.

Energy Balance

10.18. Table 10.7 gives figures on usage of energy in the modern sector of the economy in terms of oil equivalent. As shown Kenya's modern sector relies heavily on imported energy. The proportion of energy production from hydro power has been increasing but in 1978 it still accounted for only 12.8 per cent of total consumption although this is a substantial rise from the 8.2 per cent recorded in 1974. The proportion of energy generated from domestic resources is, however, expected to rise substantially in future years as both hydro and geothermal energy sources are tapped.

Energy Policy

10.19. The National Council of Science and Technology has set up a committee to advise the Government on a suitable energy policy for the country. Since the oil crisis of December, 1973, high prices of oil have continued to impede economic development. A satisfactory energy policy will, it is hoped, play a part in resolving the problems which dependence on imported sources of energy create. Meanwhile the modern sector of economy

will continue to rely heavily on oil. Various interim measures are being taken to curtail some of the adverse effects which reliance on oil has had on the country's balance of payments position. The refinery at Mombasa is being made more efficient to improve its output/input ratios. Further measures are being considered to make the distribution of oil products more efficient and economise in their use. Production of power alcohol from sugar cane for blending with motor gasoline is being initiated, and this could result in some reduction in imports of crude oil from abroad although it has been projected that demand for oil products will grow at a rate of 5.8 per cent per annum during the current plan period. The greater use of common transport services such as the railways, the oil pipeline and other means of public transport as distinct from private transport should also yield economies in consumption of oil products.

PRODUCTION, TRADE AND CONSUMPTION OF ENERGY EXPRESSED IN TERMS OF THE PRIMARY
SOURCES, 1974-1978

Table 10.7 '000 Tonnes Oil Equivalent

CHAPTER 11—MANUFACTURING

The manufacturing sector achieved further substantial growth in 1978. Its contribution to GDP at constant prices rose by 14 per cent compared with increases of 16 per cent in 1977 and 13 per cent in 1976. Increases in production were registered by all groups within the sector apart from enterprises engaged in production of meat products, furniture and fixtures, and rubber products which all showed negative growth rates. The largest increases were recorded in output of transport equipment, plastic products, electrical machinery, leather and footwear, clothing, paper and paper products, basic industrial chemicals, printing and publishing, tobacco products, sugar and confectionery, canned vegetables, fish and oils and fats, in descending order of significance. The increases in output of bakery products, beverages, textiles, clay and glass products and wood and cork products were more moderate. This overall increase of 14 per cent, well above the 9 per cent target annual average growth rate for the current plan period, was induced largely by the expansion in domestic demand as higher incomes from the coffee and tea boom of 1977 continued to work their way through the economy.

11.2. The total volume of exports of manufactured products, as noted in Chapter 7 declined in 1978. Wage employment in this sector has continued to grow and rose by a further 10.3 per cent in 1978 while wage earnings of employees in the sector increased by 15.8 per cent. The high level of investment in the sector in 1978 should help increase production in later years. However, it is possible that the recent 15 per cent increase in prices of crude petroleum with further increases anticipated before the end of the year together with continuing problems in the previously important East African market for Kenya's manufactured goods, may reduce the rate of growth of manufacturing industry in 1979 despite the current efforts being made to develop other export markets.

11.3. The values of output, and intermediate consumption, and the contribution to value added by the manufacturing sector at current prices are noted in Table 11.1. The value of output and value added rose by

MANUFACTURING SECTOR: OUTPUT AND PRODUCT*, 1976—1978

Table 11.1

K£million

	Value of Output	Intermediate Consumption	Value Added
	At Current Prices		
1976	870.24	678.07	192.17
1977	1,181.28	957.64	223.64
1978**	1,466.33	1,187.44	278.89

*Includes tea processing.

**Provisional.

24.1 and 24.7 per cent respectively in 1978. The proportion of output represented by value added had declined from 22.1 per cent in 1976 to 18.9 per cent in 1977 but showed little sign of recovery in 1978.

Output

11.4. The indices on output of manufacturing sector are shown in Table 11.2. There has been a continuous growth in the output of the sector since 1975. This can be attributed to the encouraging impact that the high level of domestic demand has had on activity in the sector. The output of enterprises engaged in manufacture of food products went up by a moderate 6.8 per cent in 1978, following an increase of 9 per cent in 1977. This increase in 1978 is mainly due to increases in the output of dairy products, particularly milk and butter, canned fruit and vegetables, edible fats, bakery products, sugar, and miscellaneous foods. Indeed the output of all types of processed food products except that of meat and grain mill products registered increases of a magnitude above 8.8 per cent. The food industry continues to account for about one third of total gross output of manufacturing sector. Its contribution to GDP during the current plan period is estimated to grow at an annual rate of 10.6 per cent. The expansion of processing units of the Kenya Co-operative Creameries at Nairobi and Mombasa, the setting-up of a second cashewnut factory at the Coast and construction of a new factory to manufacture fats and edible oils in Nairobi will contribute to this increase.

11.5. Output of meat products, after a sharp rise in 1976 when it registered its highest rate of growth in the past 17 years declined in 1977 and 1978, thereby reducing the overall rate of growth in the food industry substantially. The fall of 36 per cent in output of meat products in 1978 can be attributed to the sharp drop in the number of cattle delivered to the Kenya Meat Commission. Most of the cattle lost to the Commission were diverted to private slaughter houses which were offering more attractive prices. As a result the quantity of beef processed and canned for export declined and the volume of exports of meat products fell by 69 per cent from 9,344 tonnes in 1977 to 2,856 tonnes in 1978. Nevertheless strong consumer demand for meat products has been forecast particularly in other African countries and the Middle East and the contribution of this sub-group to GDP is projected to grow at a rate of 12.3 per cent per annum during 1978-1983 plan period. A total of K£4.9 million is to be invested to enhance the capacity to meet the target for the planned increase in production of this sub-group.

11.6. The rise in domestic and export demand of dairy products including baby foods in 1978 helped utilize the increased production of milk. The output of manufactured dairy products as a result rose by 3.2 per cent. The heavy rains during 1978 improved pastures and raised the level of milk delivered to Kenya Co-operative Creameries as noted in Chapter 8. The output in the current year is expected to be substantially higher than last year as a result of additional processing capacity that has been initiated in

QUANTITY INDEX OF MANUFACTURING PRODUCTION, 1975-1978

Table 11.2

*Provisional.

**1975 Index is binary while 1976—1978 are laspeyres chained taking 1975 as base.

Mombasa while the good rains are expected to have a favourable impact on pastures and milk production. The local consumption of milk is expected to increase appreciably in 1979 especially following the recently announced milk programme for primary schools. The total planned investment of K£6.9 million during the period 1979.1983 will help provide the processing facilities required to meet the anticipated increase in demand for processed dairy products.

11.7. Although the export sales of canned pineapples declined by 7 per cent from 45,329 tonnes in 1977 to 42,028 tonnes in 1978, the output of canned fruits and vegetables as a whole increased further by 12.3 per cent. This rate of increase was significantly lower than the increases of 50 per cent in 1975 and 39.5 per cent and 30 per cent in 1976 and 1977 respectively. The proposed investment of K£10 million during the period 1979-1983 will enhance the processing capacity in this sub-group to meet the anticipated increases in demand.

11.8. The production of grain mill products rose moderately in 1978 after two years of decline. The 3.1 per cent increase in output is accounted for by the greater utilization of imported wheat. As noted in Chapter 8, deliveries of home-grown maize and wheat handled by marketing boards declined between 1977 and 1978, while consumption of wheat flour increased from 158,400 tonnes in 1977 to 185,000 tonnes in 1978 and imports of wheat rose from 33,000 tonnes to 91,000 tonnes over the same period. Table 11.3 gives some details on the output of grain mill products.

PRODUCTION OF GRAIN MILL PRODUCTS, 1974-1978

Table 11.3 '000tonne's

Year	Wheat Flour	Sifted Maize meal	Rice	Broken Rice
1974 ..	128.1	160.5	20.6	2.7
1975	111.9	199.3	21.0	1.7
1976 ..	137.8	219.2	24.2	1.5
1977 ..	149.4	190.9	20.1	1.8
1978*	156.9	195.3	18.3	4.5

*Provisional.

11.9. The output of bakery products went up by 10.3 per cent in 1978 while bread production increased by 7.4 per cent. There was a 56 per cent increase in output of biscuits, which was accompanied by a 29 per cent increase in their exports.

11.10. The output of sugar and confectionery increased by 15.2 per cent in 1978. Total production of sugar increased by 11.0 per cent from 181,000 tonnes in 1977 to 201,000 tonnes in 1978. This increase is lower than the increase in output of cane due to a reduction in sugar content caused by heavy rains. Local production now caters for over 80 per cent of domestic demand and the gap between demand and production is being continuously reduced. In the meantime, however, imports of sugar have risen from 35,000 tonnes in 1977 to 46,000 tonnes in 1978. Such imports will be reduced significantly by the current programme for expansion of sugar cane processing capacity. The factory at Mumias is being extended and two new sugar factories are being built in Bungoma and South Nyanza districts.

11.11. The output of miscellaneous foods including processed tea and coffee and the manufacture of animal feeds accounts for over 40 per cent of the total value of output of all food processing industries. The output of miscellaneous food products rose by 8.8 per cent in 1978 compared with a rise of 15 per cent in 1977. In spite of a decline in the price of tea the output of manufactured tea increased from 66,000 tonnes in 1977 to 91,000 tonnes in 1978, a rise of 27 per cent compared with a rise of 7.2 per cent in 1977. The quantity of milled coffee on the other hand increased only slightly. An increase of 22 per cent in the exports of animal feeds in 1978 helped raise the output of this sub-group significantly.

11.12. The 13.6 per cent rise in the production of beverages and tobacco in 1978 was mainly accounted for by a sharp increase in the output of mineral waters and cigarettes accompanied by a moderate increase in the output of beer, while there was a decline in the output of tobacco largely due to 30 per cent drop in its export sales. The introduction of new manufacturing capacity during the current plan period is anticipated to cope with the rising demand for soft drinks and beer. Details on the output of individual items are set out in Table 11.4.

11.13. There was an overall increase of 9.2 per cent in production of textiles in 1978. The large growth in the output of spinning and weaving mills and cotton ginneries was offset by a fall in the output of the rope and twine industry. The continuous fall in the output of sisal products since 1974 has adversely affected the output of rope, twine, and related sisal products. The increase in the output of spinning and weaving mills and cotton ginneries was mainly effected by making fuller use of the capacity in existing factories.

PRODUCTION OF BEVERAGES AND TOBACCO, 1974-1978

Table 11.4

	Spirits	Beer	Mineral waters	Cigarettes
	<i>litres</i>	<i>"000 litres</i>	<i>"000 litres</i>	<i>Million</i>
1974	355,255	157,633	53,371	3,608
1975	362,297	153,812	66,136	3,562
1976	356,838	164,195	79,684	3,703
1977	420,180	195,160	99,409	3,944
1978	407,796	215,390	122,776	4,546

11.14. In spite of the substantial level of imports, output of clothing industry registered a record increase of 36.0 per cent in 1978. The increase was accounted for by the rise in production of trousers, dresses and underwear garments of 56, 70 and 82 per cent respectively. Production is expected to rise further in 1979.

11.15. The output of leather products and footwear in 1978 rose by 36.4 per cent mainly due to an increase of 56 per cent in output of sports goods and of 8 per cent in shoe production. The value of imported footwear in absolute terms, however, has also risen from K£ 1.5 million in 1977 to K£2.5 million in 1978. New projects to be promoted during the current plan period include the manufacture of travel bags, handbags, small leather cases, and similar other articles using locally available finished leather and skins.

11.16. The overall increase of 27.4 per cent in output of paper and paper products does not reflect the wide variation in the performance of various components of this group of industries. There was an increase of 25 per cent in the output of locally manufactured paper. The increase was made possible by the addition of new capacity during the year. Despite this rise, the imports of paper and paper products, increased by 14 per cent in value from K£9.03 million in 1977 to K£10.26 million, in 1978. The imports of newsprint paper rose from 4,775 tonnes in 1977 to 5,714 tonnes in 1978. With the plan to manufacture newsprint from sisal waste and residue from sawmills, another way of recycling industrial waste, the contribution of this branch to CIDP is projected to grow at an annual rate of 8.1 per cent during the current plan period.

11.17. The production of basic industrial chemicals rose by 24.9 per cent in 1978 despite a fall in the output of certain products. A further investment of K£9.4 million is to be undertaken in this branch of industry during the current plan period to increase the production of caustic soda, fertilizers and low density polyethelene.

11.18. The overall growth of 8.2 per cent in output of other chemicals in 1978 is accounted for by the sharp rise in the output of soap and cleansing preparations, pharmaceuticals, drugs—both tablets and liquid, and of miscellaneous chemical products. An increase in the export demand for paints and varnishes and for soap helped their production to increase by 60 and 55 per cent respectively. The value of paints and varnishes and soap exported rose by 46 and 17 per cent. Output of miscellaneous chemicals which includes the production of matches, rose by 8 per cent.

11.19. Details on production of petroleum products and the performance of the oil refinery are noted in Chapter 10.

11.20. The slight drop in the output of rubber products in 1978 is accounted for mainly by the decline in the manufacture of retread vehicle tyres, bicycle tyres and tubes and rubber soles. Production of new tyres increased by 13 per cent while output of retread tyres declined by 26 per cent while output of retreaded tyres declined by 26 per cent. The number of imported tyres required to satisfy the rising domestic demand increased from 39,547 in 1977 to 166,599 in 1978. In addition to the plan to expand the existing tyre factory in the country so as to produce about 422,000 tyres, another tyre plant is also scheduled to be built during the current plan period 1979.1983.

11.21. The output of plastic products went up by 43.1 per cent in 1978 mainly because of the increase in the production of plastic shoes, containers and plastic crates and an expansion of the capacity to meet rising domestic demand for bottles.

11.22. The output of non-metallic products went up moderately by 2.2 per cent in 1978. This modest growth rate is accounted for by the one month shut down of one cement factory for repairs. However, the rise in exports of soda ash from 101,787 tonnes in 1977 to 154,440 tonnes in 1978, an increase of 52 per cent, helped raise local production.

CEMENT PRODUCTION AND UTILIZATION, 1974-1978

Table 11.5

'000 tonnes

	PRODUCT- TION	IMPORTS		EXPORTS		CONSUMP- TION AND STOCKS
		From Uganda and Tan- zania	From Over- seas	To Uganda and Tanza- nia	To Overseas	
1974 ..	856.5	—	0.4	39.5	490.7	326.7
1975 ..	897.1	—	0.2	38.7	511.8	346.8
1976 ..	986.9	—	—	27.4	601.0	358.5

1978* ..	1,133.3		0.2	12.8	597.3	523.4

*Provisional.

11.23. A 9.4 per cent growth in the output of metal products in 1978 was made possible by an increase in the production to satisfy domestic demand for products ranging from water pipes to roofing materials. There was a significant increase in the output of galvanized corrugated iron sheets, iron rods and bars, wires and welded mesh, while the growth of 192 per cent in the output of transport equipment is accounted for by the increase in the output from the three major motor vehicle assembly plants. The number of assembled vehicles increased by 77 per cent while the number of coaches and buses and lorry bodies built increased by 58 and 34 per cent respectively.

Exports of Manufactured Products

11.24. As noted in Chapter 7, the total volume of exports declined in 1978 and this was accompanied by a fall in the volume of exports of most manufactured goods. The closure of the border by Tanzania continued to have an adverse impact on exports of manufactured products from Kenya to Tanzania and on supplies of raw materials for such production. However, production of raw cotton as an input to the domestic textile industries has increased significantly as a side effect of this restriction on trade between

Tanzania and Kenya. There was a switch to more expensive supplies of tobacco and the export sales of manufactured tobacco declined. During the period of the East African Common Market, tyres used to be imported from Tanzania, but since the border closure, local production of new tyres has risen by 30 per cent between 1976 and 1977 followed by a further rise of 13 per cent between 1977 and 1978. The conditions in the export market for Kenya's manufactured products have also worsened because of the decline in world market coffee and tea prices which affected import demand in neighbouring countries. As a result exports to Uganda, Rwanda, Burundi and Zaire were reduced significantly in 1978 though some part of this fall was due to the problems associated with the civil unrest in Uganda. Exports of petroleum products, a major constituent of Kenya's exports of manufactured products fell by 14.3 per cent in volume in 1978. Among other principal items, declines were also recorded in exports of meat products, pyrethrum extract, wattle extract, canned pineapples, and cashewnuts but there were rises in exports of butter, cotton, animal feeds and soda ash.

Development of the Manufacturing Sector

11.25. Kenya Industrial Estates, a state corporation has continued to play a major role in providing loan capital for machinery and equipment to enable smaller entrepreneurs to set up in industry. By the end of 1978 it had approved a total of 201 small and medium scale projects involving an investment of K£4.15 million. Meanwhile, expansion of new manufacturing capacity in the medium and large scale industries in 1978 continued to be financed by the three other parastatal organizations the Industrial and Commercial Development Corporation; the Industrial Development Bank; and the Development Finance Company of Kenya. The Development Finance Company of Kenya approved investments amounting to K£3.56 million in 28 projects as compared to an investment of K£1.82 million in 11 projects in 1977. Existing projects being financed by the Corporation include plants for processing agricultural products and manufacture of food products and beverages, assembly of vehicles and their components, and manufacture of textiles, wood and wood products and leather and leather goods. Industrial Development Bank also continued to diversify its field of operations and its major new interests in 1978 were in processing of agriculture and metal products.

11.26. New projects proposed, announced or completed during 1978 which involve participation by the listed parastatals include a chipboard plant in Nyeri District to cost K£3.3 million, a machine tool complex costing K£1.6 million, a plywood factory near Kericho entailing an investment of K£1.3 million, an animal feed plant worth K£1.1 million, the expansion of a motor vehicle assembly plant costing K£1 million, expansion of a ceramics plant at a cost of K£1 million and a steel casting plant worth K£2.8 million. There is a long list of other projects concerned with production of items ranging

from chemicals and pharmaceuticals to metal products, paper bags and leather goods. Two large ventures are concerned with production of power alcohol and industrial alcohol and yeast from sugar cane molasses entailing an estimated investment of K£9.75 million. A proposal for expansion of the paper mill at Webuye at an estimated cost of k£8 million is under consideration, while work on the K£1.7 million extension to the steel rolling mill at Kikuyu is nearing completion in 1979.

11.27. Many of these industrial enterprises will find markets for the output in Kenya. However, the current activity to promote exports of manufactured products needs to be pushed as far and as hard as possible to ensure the country achieves an early break through in this field. The main current handicap to the country's development is the balance of payments constraint and this can only be resolved by promoting exports on the one hand and curtailing imports on the other. Industrial development has a significant role to play in this respect.

11.28. The number of enterprises in the manufacturing sector is set out in Table 11.6. The total has risen from 13,416 in 1974 to 14,764 in 1978. In terms of production they can be grouped into enterprises engaged in grain

ENTERPRISES IN THE MANUFACTURING SECTOR, 1974 -1978

ENTERPRISES IN THE MANUFACTURING SECTOR, 1974-1978			<i>number</i>
Table 11.6			
Activity	1974	1976	1978*

milling and manufacture of clothing, leather products and footwear, furniture and fixtures and transport equipment. These groupings are of mainly small scale manufacturers whose output is at present having little impact on the country's export trade. Only a few of the grain product manufacturers have a limited interest in export markets with scope for further development of exports of animal feedstuffs. The five groups above consisted of 12,724 firms in 1978. Excluding these firms there were 2,040 other firms in the 20 other groups shown in the table. It is among these 2,040 firms that the potential for export is at present the greatest.

CHAPTER 12—BUILDING AND CONSTRUCTION

The contribution of building and construction activity to the GDP increased by 6.4 per cent in 1978. Projects initiated at the time of the coffee boom in 1977 were being developed at a substantial rate in 1978. Purchases of property with the receipts from high agricultural sales have helped to push up the prices of these properties. Sales made in 1977 induced new construction in 1978. Figures on building plans approved by Nairobi City Council in 1978 indicate that continuously higher spending on new building should have an impact on the level of activity in this sector in 1979 onwards although attitudes could change if the economic scene were to worsen further. The total value of building plans approved by Nairobi City Council rose by 37 per cent to K£58.2 million in 1978 and in other towns increased by 78 per cent.

12.2. In spite of completion of several public buildings and construction projects in 1977, the number of people directly employed in construction activity in the public sector that is working for the Central Government and local authorities rose by about 38 per cent in 1978, whilst wage employment in this activity in the private sector declined slightly. It seems likely that the private sector is using more subcontractors in its work and this has some impact on recorded employment. The overall rise in numbers in wage employment in construction both public and private in 1978 is currently estimated at 13 per cent.

12.3. As noted in Table 12.1 the combined building and construction costs index rose by 8.3 per cent in 1978 as compared to increases of 7.4 per cent and 5.5 per cent in 1977 and 1976, respectively. These increases in building and construction costs in the last three years have been relatively moderate compared to increases of 30.4 per cent in 1974 and 13.8 per cent in 1975.

*From December to December.

The continuous rise in building costs in the last five years has pushed the house prices above the reach of low and medium income families who have been particularly affected by shortages of adequate housing in urban areas. The rises in building costs have also had an impact on Government development projects. The tower block of the Kenyatta National Hospital was for example originally estimated to have cost K.Sh. 117 million when the tender

was first awarded in 1975. The costs have now escalated to K.Sh. 159 million with the project scheduled for completion in 1980. The rise in building and construction costs in 1977 and 1978, can be attributed mainly to increases in prices of building materials. Labour costs over the two year period rose by only 4.5 per cent. The most significant increases in 1978 were registered for aggregate, blocks, sand, windows and glass. Essentially as a result of the rise in the cost of input materials, the building cost index for residential and non-residential buildings and other construction rose respectively by 8.4, 9.6 and 6.8 per cent in 1978 as compared to increases of 9.9, 6.9 and 6.6 per cent in 1977.

Buildings

12.4. Tables 12.2 and 12.3 detail the value and number of all reported private building work completed in the main towns both on new buildings constructed and on extensions effected to existing buildings. Figures in Table 12.2 show that the value of work completed at current prices has been on a rising trend since 1974 and the total value of work completed of K£13.92 million in 1977 may be compared with K£7.39 million in 1973 and K£11.37

million in 1974. Between 1976 and 1977 the value of private building work completed rose by 11 per cent at current prices which is equal to a rise of about 2 to 3 per cent at constant prices. It is estimated that when the outstanding returns have been received for 1978 the value of all private building work completed in 1978 will have recorded a rise of about 9 per cent, which in real terms is equal to a further increase of 2 to 3 per cent.

12.5. Nairobi, being the capital city continues to record high figures on completions of private building work. In 1977 it accounted for 64 per cent of the private building work completed in the main urban areas. Also both

in 1976 and 1977 more than half the total value of private building work was accounted for by non-residential buildings while in 1978 there was a reversal of the trend of earlier years and the value of private residential buildings completed rose to over 73 per cent of the total value of private building work completed in the year.

12.6. Figures on the number of reported completions of public buildings noted in Table 12.4 show a record value for such completions in 1977 despite a substantial fall in the number of new units. The increase is mainly accounted for by completion of five major public building projects in Nairobi. These include Kencom House—the headquarters building of Kenya Com.

**Including the value of extensions.

commercial Bank, the headquarters building of the National Bank, a motor vehicle assembly plant and two other building projects for two parastatal organizations, all at a total cost of K£8 million. The total value including

extensions reached K£10.98 million in 1977 compared with K£6.31 million in 1976 and K£7.39 million in 1975. The provisional figures for completions in 1978 show a very substantial fall in value of completion of public buildings. There are, however, a number of large on. going projects, and these add substantially to the net output of the sector in 1978. These projects include the headquarters building of the State Re-insurance Corporation and the Co-operative Bank of Kenya, and the Kenya Technical Teachers College. The total cost of these three projects will be in the region of K£10 million.

12.7. The value of direct expenditure by Central Government on housing is shown in Table 12.5. After the decline in 1975/76 and 1976/77, the total value of actual expenditure by the Central Government on housing more than doubled from K£3.42 million in 1976/77 to K£7.10 million in 1977/78.

APPROVED AND ACTUAL CENTRAL GOVERNMENT EXPENDITURE ON HOUSING, 1973/74-

1978/79

Table 12.5

K£' 000

Year	Approved	Actual	Approved Expenditure as percentage of Development Expenditure
1973/74	5,550.7	4,308.7	7.81
1974/75	5,571.2	4,862.4	5.74
1975/76	4,721.5	4,439.9	4.31
1976/77	3,451.0	3,416.6	2.7
1977/78	7,686.1	7,098.9	3.9
1978/79	8,052.8		

The bulk of this expenditure is accounted for by loans of about K£5.3 million to the National Housing Corporation and K£1.45 million to the Housing Finance Company of Kenya. A further increase is anticipated in 1978/79 as a result of additional loans to the National Housing Corporation.

12.8. The National Housing Corporation is the agency set up by the Government to execute its objectives on provision of housing for middle and lower income groups. As shown in Table 12.6 the number of housing units completed by the Corporation rose to 1,544 in 1978 from 916 in 1977 and 317 in 1976. Despite the increase the figure for 1978 is well below the number of 2,237 units completed in 1974. Of the total 862 units completed in Nairobi in 1978 valued at K£2.62 million 512 were built in Kibera and the remainder in Langata as a second development of Ngei Estate. A further 300, 159 and 121 units, worth K£277,000, K£284,000 and K£295,000 were respectively erected in Nyanza, Central and Rift Valley Provinces. These include extension work on the Arina/Shaurimoyo Estate in Kisumu, housing estates in Nyeri Municipality and Nyahururu and Karatina townships in Central Province and in Eldoret in Rift Valley Province. The Corporation also made available 1,077 site and service plots in 1978. The increase from

the number of 355 such plots which were made available in 1977, reflects the Government's emphasis on promotion of site and service schemes as a method for provision of housing for the majority of families in urban areas.

12.9. Figures of building plans approved continue to indicate an encouraging trend for the building industry. Tables 12.7 and 12.8 refer. The value of private and public building plans approved by Nairobi City Council after a decline in 1976, rose by 115 per cent to K£42.45 million in 1977 and K£58.24 million in 1978. The value reported in 1978 was more than twice as high as in 1975. The value of plans approved for residential and non-residential buildings for the private sector rose by 73 and 61 per cent to K£26.2 million and K£25.2 million respectively in 1978. The overall value of private building plans of K£51.41 million was more than three times the average for the years 1974 to 1976. Total value of public building plans approved on the other hand declined by 42 per cent from K£11.67 million in 1977 to K£6.83 million in 1978. The particularly high figure in 1977 is accounted for by a few major projects. The total of K£6.83 million in 1978 is more in line with the long term trend for public sector building. Total

value of plans approved for residential buildings in Nairobi in 1978 reached the very high figure of K£30.31 million; this is 67 per cent higher than the figure for 1977 and four times the particularly depressed figure of K£7.5 million for 1976.

*Provisional.

12.10. Although the figures on building plans approved by other municipalities are not final for 1978, the high increase in total value suggests that there will also be a record increase in building activity in these other areas particularly in Mombasa and Kisumu where the demand for dwellings is running at high levels. The private sector has continued to play a dominant role in these towns and private building plans accounted for over 90 per cent of the total value in 1978. Total value of plans passed in these other municipalities rose to K£26.2 million in 1978 compared with K£14.69 million in 1977 and K£13.94 million in 1976.

12.11. The public sector is assigned a catalytic role in the provision of housing. However, this sector will, it is hoped, directly provide nearly 28,000 dwelling units and a further 28,000 site and service plots in urban areas during the plan period 1979/1983. The total national housing requirement is estimated at some 290,000 housing units in urban areas, including a current shortfall estimated at 140,000 units. For the rural areas the estimated requirement is 1,075,000 housing units including 725,000 to replace existing houses which are beyond repair. The Government intends to take several measures to attain the above targets. These include control of urban land to ensure an adequate supply of land at reasonable prices for housing development as well as a review of building by-laws, and a study of additional measures to further enhance the effectiveness of the National Housing Corporation. The Government's own direct expenditure on housing is expected to reach a total of K£53.3 million at 1978/79 prices in the plan period 1978/79 to 1982/83.

Roads and Other Construction

12.12. Government expenditures on the construction and maintenance of roads have been increasing consistently in part due to higher costs but mainly as a result of economic development. The total appropriations earmarked for development of roads amount to K£40.25 million in 1977/78. As indicated on Table 12.9 expenditure on all types of roads is anticipated to rise in 1978/79 above the 1977/78 level. The Government is also currently involved in the construction of bridges at Nyali and Mtwapa. Construction work on these in the 1978/79 was estimated to cost K£2.5 million and K£1.0 million respectively. Total project cost for both the bridges when finished will amount to K£8 million. During the current plan period the Government is targetting to have about 51 per cent of rural small holders within 2 km. of a bus route. This entails substantial development of rural access roads.

12.13. Government is endeavouring to extend the supply of water to towns and rural areas and has set aside K£38 million for water development purposes during the financial year 1978/79. Additional information on the construction work on water development projects is provided in Chapter 9. The major projects include the Sabaki River water supply scheme for Mombasa and the construction of the Upper Tana Reservoir. Water projects will contribute significantly to the level of construction activity in 1979.

TOTAL EXPENDITURE ON ROADS, 1976/77-1978/79

TOTAL	28,699.9	34,248.7	40,362.3

*Provisional.

12.14. The proportion of materials required for the building and construction industry produced locally is constantly increasing. The domestic consumption of cement increased by 6 per cent to 512,000 tonnes in 1978. The Government plans to increase the range of locally produced building materials during the current plan period and about K£5 million is being invested in glass sheet manufacturing industry. A number of other materials are also scheduled to be domestically produced, while output of those in production will rise in line with the increase in building and construction activity.

CHAPTER 13—TOURISM

In the final reckoning 1978 was an indifferent year for tourism. While the total of receipts from tourism went up from K£48.3 million in 1977 to K£60 million in 1978, the number of visitors arriving in Kenya increased only moderately and indeed the total of visitor days spent in Kenya declined in 1978. The increase in receipts is therefore essentially accounted for by price rises rather than by a real increase in tourism activity in the country. Political upheavals in eastern and central Africa, reports of outbreaks of tropical diseases, and the competition of the low air fares on the north Atlantic routes as compared to destinations in Africa are the main factors which contributed adversely to the final outcome noted above.

13.2. The last development plan terminated at the end of 1978. As foreseen earlier, the targets set in the last plan have not been achieved. The actual number of visitors to Kenya in 1978 came to only 44 per cent of the target figure of 816,000 visitors shown in the plan. These visitors spent a total of 4.75 million days in Kenya which was 58 per cent of the planned length of stay. As a result total receipts were substantially below the target

BED OCCUPANCY PLANNED AND ACHIEVED, 1973 AND 1978

TOTAL	2,878	5,944	2,783	3,983

figure. Table 13.1 gives the number of planned and actual bednights occupied for 1973 and 1978. The number of actual beds occupied in 1978 was 67 per cent of the figures planned for the year.

13.3. In Table 13.2 statistics of visitor arrivals and departures by purpose of visit are shown. The total of arrivals in Kenya rose by 4.1 per cent between 1977 and 1978. The highest increase of 23 per cent was recorded in arrivals of business visitors while the number of arrivals of visitors in transit and on holiday went up by 7 per cent and 1 per cent, respectively. Holiday makers accounted for 73 per cent of the total arrivals and the balance of 27 per cent was shared equally by business and transit visitors, a pattern very close to that for 1977. The number of departures, on the other hand, declined by 3 per cent. As per figures in Table 13.2 the tourist statistics continue to exhibit a wide discrepancy between figures on visitor arrivals and departures. To some extent the disparity is due to differing declarations made by visitors at the time of entry into and exit from Kenya.

13.4. Information available for the first quarter of 1979 suggests that figures for both arrivals and departures will each be a little higher in 1979 than in 1978. The number of bed-nights occupied in hotels increased by 3 per cent during the quarter over the same period in 1978. Bed-nights spent at hotels by foreigners rose by 2 per cent and those by Kenya residents increased by 8 per cent.

13.5. Table 13.3 sets out statistics on visitor departures by country of residence. The overall number of holiday visitors as per departure figures declined by 7 per cent between 1977 and 1978. The only continent showing some increase in holiday visitors was Asia. However, among individual countries increases of 8 per cent, 6 per cent and 3 per cent, were respectively recorded in the number of holiday visitors from West Germany, the United

Kingdom and Switzerland, while the number of holiday visitors who are residents of Tanzania, the U.S.A. and Italy declined in 1978 by 48 per cent, 27 per cent and 21 per cent, in that order.

*Includes business visitors and persons in transit.

13.6. This overall decrease in number of holiday visitors as per departure figures was mainly due to a decline of 42 per cent in the number of tourists resident in Uganda and Tanzania, accentuated by a drop of 22 per cent in the number of tourists from North America. If North America and Uganda and Tanzania are excluded, the number of holiday visitors from the rest of the world rose slightly from 225,100 in 1977 to 225,300 in 1978.

13.7. The number of all visitors as per departure figures declined by only 3 per cent in 1978 compared to a drop of 7 per cent in the number of holiday visitors. Again this was due to a decline in the number of visitors resident in Tanzania, and in the number of visitors from Italy and the U.S.A. The total number of visitors from these three countries fell in 1978 by 45 per cent, 19 per cent and 18 per cent, respectively. Because of increases in the

number of business and in-transit visitors from the United Kingdom, the total number of visitors from that country rose by 12 per cent while the corresponding increase in the number of visitors from West Germany was 10 per cent—leading to an overall rise in the number of visitors from Europe of 2.5 per cent from 195,400 in 1977 to 200,300 in 1978.

13.8. The low fares on the North Atlantic routes continued to deprive Kenya of tourists from North America. The new low air fare structure between Europe and North America made tourism much cheaper between the destinations in these two continents, while travel to African countries with the exception of South Africa continued to be a more expensive proposition. The closure of the border by Tanzania aggravated the situation as it discouraged the American tourists who have been accustomed to buying tourist packages which include the major game areas in East Africa from visiting this region.

13.9. Information on visitor departures by mode of travel is given in Table 13.4. The proportion of visitors departing by air in 1978 rose to 93 per cent of the total. This is as expected given the declining importance of

Table 13.4 VISITOR DEPARTURES BY METHOD OF TRAVEL, 1974-1978 '000

road travel in interterritorial movements within East Africa. In 1976 air travel had accounted for 80 per cent of visitor departures while persons travelling by road made up for virtually all of the balance of 20 per cent of the remaining visitor departures.

13.10. Table 13.5 gives information on length of stay of visitors and includes details on the length of stay by the regions of residence of the visitors. The total number of days spent by visitors in Kenya fell by 7 per cent from 5.10 million in 1977 to 4.75 million in 1978. A significant feature of the decline was the drop of 17 per cent in the number of days spent in Kenya by visitors staying more than 28 days. It is thought that the ban on hunting and trade in game trophies is the main reason for the decline in the number of days spent in Kenya by this category of visitors. As a result the average length of stay per visitor fell by 6 per cent from 14.8 days per visitor in 1977 to 14.2 days in 1978. The 7 per cent decline in the total number of days spent by visitors in Kenya was made up of a decrease of 36 per cent in the

number of days spent in Kenya by residents of the other two East African countries followed by another decline of 19 per cent in the number of days stayed by persons from North America. The number of days stayed by residents of West Germany and the United Kingdom, however, increased by 6 per cent and 3 per cent, respectively. Residents of Europe stayed a total of 3.08 million days in 1977 and 3.06 million days in 1978 thus accounting for a proportion of over 60 per cent of the total number of days spent by all visitors to Kenya in 1977 and 1978.

Tourist Receipts

13.11. As noted above tourist receipts rose from K£48.3 million in 1977 to K£60 million in 1978—an increase of 24.2 per cent. This increase contrasts with the decline in number of visitor days spent in Kenya and in the number of visitor departures. Residents of Europe alone accounted for

about 75 per cent of the total receipts. Estimated shares for individual countries were West Germany 25 per cent, the U.K. 13 per cent and U.S.A. and Canada 9 per cent. Proportions accounted for by holiday, business and in-transit visitors were estimated to be 85 per cent, 13 per cent and 2 per cent, respectively. Visitors staying up to two weeks contributed almost 50 per cent of the total receipts compared with 35 per cent and 15 per cent from visitors staying for a period of two to four weeks and over one month, respectively.

Hotel Occupancy

13.12. Details on hotel bed occupancy by type of occupant are given in Table 13.6. Hotel capacity rose by 4.7 per cent from 7.03 million bednights in 1977 to 7.36 million bednights in 1978 while the actual number of bednights occupied went up at a lower rate of 3.8 per cent. As a result the occupancy rate fell slightly from 54.6 per cent in 1977 to 54.1 per cent in 1978. The absolute increase in the number of bednights spent in hotels from

*Persons staying one month or more in one hotel—includes some block bookings for aircrew.

3.84 million to 3.98 million was accounted for by a 3.2 per cent rise in the number of bednights occupied by foreign residents and an increase of 9.2 per cent in domestic tourism. As in the preceeding two years, the share of bednights occupied by foreign visitors in 1978 remained at just over 70 per cent of the total, while the proportion of bednights occupied by Kenya residents rose from 16.7 per cent in 1977 to 17.6 per cent in 1978.

13.13. Table 13.7 sets out figures on hotel occupancy by major tourist zones. The increase of 3.3 per cent in the number of bednights occupied in "high class" hotels in Nairobi was due to the arrival of more business visitors. The number of bednights stayed at all Nairobi hotels in 1978 was, however, little changed from 1977. In 1978 Nairobi hotels accommodated 35 per cent

*Includes all persons staying one month or more in one hotel.

of total visitors compared to 37 per cent in 1977. Because of the decline in the number of American visitors whose interest normally lies in the game areas, guest bednights occupied in the Coastal hinterland and Masailand hotels dropped by 12 per cent and 3 per cent in 1978 compared to 1977. The share of bednights spent in coastal hotels on the other hand rose to 48 per cent of the total in 1978 from 46 per cent in 1977. The occupancy rate at the coast rose by 7 per cent, largely as a result of an increase of 10 per cent in the number of tourists from West Germany.

13.14. Information on hotel capacity by all tourist zones is given in Table 13.8. Coastal beach hotels continued to lead other areas in the average bed occupancy rate, followed by hotels in Nairobi and Masailand zones. The present efforts to expand hotel capacity in the beach areas at the Coast thus appear to be justified. In 1978 coastal beach hotels had 34 per cent of the total tourist class hotel capacity of 7.4 million bednights in the country while Nairobi had 37 per cent. Hotel capacity increased in 1978 in all zones except Nairobi. The highest increase of 50 per cent over the 1977 capacity occurred in tourist hotels in western Kenya. The capacity of hotels in the Lake Basin increased by over a fifth from 157,000 to 196,000 bednights in 1978. Utilization of beds in these areas, however, did not rise as fast. This resulted in a decline in the occupancy rates between 1977 and 1978. Increases also occurred in bed capacity in hotels on Mombasa Island and in northern Kenya. The latter, however, as in the previous years had an occupancy rate of only 18 per cent in 1978.

13.15. There was a small decline of 2 per cent in nights spent in hotels in Nairobi. This is accounted for partly by the decline in visitors from Tanzania and Uganda and partly by the decline in "conference" tourism in 1978. In 1977 the Kenyatta Conference Centre had hosted 13 international conferences with a total of 8,000 delegates; while in 1978 although the number of conferences increased to 24 the number of delegates participating in them declined to 6,785.

13.16. More effort is needed to try and market Kenya tourism particularly in long-haul generating countries so that a steady bed occupancy rate may be achieved throughout the year. Despite the reduced rates charged by coastal hotels during off-peak periods, occupancy rates still remain very low during these months. In May, 1978, for example, bed occupancy rate for beach hotels was only 34 per cent whereas in January and December of the same year the occupancy rates had risen to 89 per cent and 80 per cent, respectively. Some areas in which tourist class hotels have consistently low occupancy rates with the exception of hotels in Nairobi and the coastal belt need to be looked at very carefully before further capacity is developed.

13.17. Figures on hotel bed nights by country of residence of the occupants and location of accommodation are shown in Table 13.9. From the details in this table it can be seen that 61.3 per cent of the 4.7 million days stayed by visitors in Kenya was in hotels. There are substantial variations in the

visitors from Asia to 88 per cent for those from West Germany. Visitors proportion of visitor days spent at hotels ranging from only 26 per cent for also vary according to their country of residence in their preferences for areas in Kenya. United Kingdom residents prefer Nairobi and the game areas nearby. Those from West Germany prefer the coast while those from

North America have a preference for the game lodges. Table 13.10 details figures on occupancy rates in the game lodges. The number of bednights spent at the game lodges declined by 19 per cent as a result of the decline in the number of visitors from the U.S.A., Scandinavia and "other" Europe which includes Switzerland, Italy and France.

13.18. Figures on visits to the National Parks are set out in Table 13.11. The number of visitors to these parks declined by 3 per cent in 1978. Particular declines were recorded in number of visitors to Aberdare, Amboseli, Meru and the Tsavo national parks, a trend that is reflected in the low occu.

Development of Tourism

13.19. The Kenya Tourist Development Corporation, as at June 1978 had invested a total of K£3.8 million in equity capital and K£2.7 million in loans to enterprises engaged in tourist industry. Of the latter K£1.04 million was specifically loaned to facilitate Kenyanization of the tourist industry. As at 30th June 1977 the Corporation had invested K£3.5 million in equity capital and K£2.48 million in loans. During the period under review extensions were effected to the lodge on Mt. Elgon, while construction of a new hotel at Homa Bay was nearing completion. A new lodge was also opened on Lion Hill at Lake Nakuru and the capacity at Maralal Safari Lodge further expanded. New hotels at Eldoret, Kakamega and Busia are in the final planning stages. They form part of the Corporation's aim of developing the Western Circuit and spreading the benefits of tourism to other areas of the country.

13.20. The Government imposed a ban on trade in wildlife trophies last year in an endeavour to conserve the wildlife resources which are critical to the maximization of revenue from tourism. The Government's capability to control poaching was also enhanced by strengthening the four anti-poaching units in the country. This together with the ban on hunting and dealing in trophies has reduced poaching though it also appears to have had some impact on certain types of tourists and their length of stay in Kenya.

13.21. Plans are at an advanced stage for the Government to assume responsibility for management and operation of reserves on behalf of the respective local authorities in whom the land involved is vested. These authorities are to be guaranteed a minimum return from such resources. Infrastructure in these reserves is to be developed to cope with the increasing tourist traffic subject to the ecological constraints. Also in order to transfer

the economic benefits from wildlife to the local residents in the dispersal areas adjacent to the parks and reserves from which the animals migrate during wet seasons, agreements have been entered into with land-owners in Mara and Amboseli to receive a grant from the Government. Camping and game viewing facilities are being developed in these dispersal areas to supplement the grant.

13.22. The Government has sponsored three studies which are being undertaken, each with a view to aiding development in certain specific aspects of tourism. The tourism pricing policy study continued throughout last year and its report will be submitted to the Government soon. Consultants have also been commissioned to conduct a study on movement of very large herbivores designed to maximize their economic benefit to the country as a whole. Thirdly the Kenya Tourist Development Corporation is encouraging the provision of additional bed capacity at the coast where accommodation shortages during the tourist seasons have been critical.

13.23. Efforts in the promotional field are designed amongst other things to attempt to attract more foreign visitors in the off-peak months while also at the same time concentrating the publicity in those markets which indicate a potential for a further flow of tourists. Field operations are being streamlined in various overseas countries to make the publicity campaign more effective.

13.24. The objective of the Development Plan, 1979.1983 is to achieve an orderly and manageable growth of tourism in the country. It is acknowledged that although the funds invested in tourism need to be used to generate the highest possible net return, such investments should neither result in an over-exploitation of the various natural resources nor bear any adverse effect on the way of life of the people in the areas concerned. The Plan target is to attract 508,000 visitors to Kenya by 1983. Some increase in the average stay of visitors has also been projected. Both these projections yield a target figure of 6.3 million bednights for visitor occupancy in 1983 at an average annual growth rate of 9 per cent. This latter target may prove to be difficult to achieve in view of the continued escalation of petroleum prices and its impact on cost of air travel and on incomes in tourist generating countries.

CHAPTER 14—TRANSPORT AND COMMUNICATIONS

The output of transport and communications sector rose by 25.5 per cent in 1978 as shown in Table 14.1. The contribution of the sector to GDP rose by 25.9 per cent at current prices and 5.5 per cent at constant prices. This is a very satisfactory outcome after the indifferent experience of the years to 1977 when the problems of the corporations previously operated by the ex East African Community were coming to a head.

TRANSPORT AND COMMUNICATIONS—VALUE OF OUTPUT, 1974-1978

Table 14.1

* Provisional.

14.2. Increased activity and higher profits were reported in all subgroups of the sector. The most significant increases in output value were achieved in air transport with an increase in output at current prices of 62 per cent, followed by road transport with a growth of 33 per cent, water transport 25 per cent and communications 27 per cent. In 1978 the Kenya Airways was more fully operational than in 1977 and had taken over most of the routes of the defunct East African Airways Corporation. Though the recovery in the value of output from air transport was sharp, the total of output was still below the level recorded in 1976. Higher charges at Mombasa port led to a higher level of profitability from water transport operations while greater activity helped the Posts and Telecommunications Corporation and its subsidiary Kenya External Telecommunications Company, to increase their output and profitability.

14.3. Receipts from road and rail transport are detailed in Table 14.2. Road transport benefited in 1978 from a higher overall level of activity and there were more trucks and lorries in operation. Haulage receipts from road freight transportation activity increased by 30 per cent from K£34.3 million in 1977 to K£44.7 million in 1978 and earnings from road passenger traffic rose to K£26.0 million. Total receipts from rail traffic increased only marginally from K£27.5 million to K£28.0 million. The tariff revisions of October, 1977, helped recoup for the loss of petroleum traffic to the oil pipeline in 1978.

Road Transport

14.4. Details on new registrations of motor road vehicles are given in Table 14.3. The total number of registered vehicles declined in 1978, by 3.6 per cent, but these were still 23,476 in all a high figure compared with the years 1974 to 1976. There was a substantial fall of 2,097 in the number of vans and pick-ups registered but registrations of saloon cars and station wagons increased by 3.7 per cent and 4.3 per cent, respectively. The most

*Provisional.

significant increase occurred in registrations of lorries and trucks, rising from 1,857 in 1977 to 2,745 in 1978. The increase is probably related to the economic boom of 1977 with orders placed in that year being delivered in 1978. The country's road transport fleet has been strengthened at the same time as the railways have received substantial new equipment and the oil pipeline has come into operation.

14.5. Table 14.4 details the number of licences issued for vehicles on hire for passenger and freight transport. The number of licences in 1978 increased by 8.8 per cent for passenger vehicles and 20.4 per cent for freight vehicles, over 1977. The substantial increase in freight licences is partly a reflection of revival of the trucking industry.

TOTAL	7,679	6,352	7,384	6,870	7,955

14.6. The public owned Kenya Transport Company—Kenatco performed better in 1978 than in 1977, making a profit of K£157,000 compared to a loss of K£257,500 incurred in 1977. There was improvement in every aspect of the company's operations except the clearing and forwarding department which has now been closed. The company continued to move freight to Uganda, Rwanda, Burundi, Zaire and Sudan. Uganda and Rwanda freight traffic accounted for 55 per cent and 27 per cent, respectively, of total freight hauled in 1978.

Railways

14.7. The transfer of the movement of white oil traffic from Mombasa to Nairobi to oil pipeline during 1978 had a very significant effect on railway operations. The loss of this traffic however occurred at a time when new locomotives and rolling stock had entered into service. This enabled the railways to attract other traffic with the result that the loss in terms of freight carried has virtually been made up.

14.8. There was only a small fall of less than one per cent in the total tonnage of freight carried between 1977 and 1978. Revenue receipts of the railways, on the other hand, amounted to some K£28.7 million, a rise of 4 per cent. The rise is mainly accounted for by the adjustments that were effected to the tariff in October 1977. Goods traffic earned K£25 million while passenger traffic and other coaching operations earned another K£2 million. The rest of the revenue was derived from livestock traffic, catering and other miscellaneous receipts.

14.9. The railways benefited from an unprecedented injection of new rolling stock into the system in 1978. The delivery of twenty-six 93 class diesel electric locomotives from U.S.A. was completed during the year. Twenty-two out of a total order of twenty-six 62 class diesel hydraulic locomotives were also received from West Germany. These new locomotives were part of an order worth K£19.95 million which was placed to achieve full dieselization of the Kenya Railways. The railways took delivery of the first of 1,200 wagons worth some K£23.6 million which have been ordered from the U.K. The first lot comprised of 440 low-sided wagons and 100 high-sided wagons with sliding roofs. Later the first batch of a new generation of third class coaches with many modern amenities was also received from Sweden. Twelve such coaches offered as a grant by the Swedish International Development Agency and built to the Kenya Railways specifications were delivered during the year.

14.10. The major works on the K£1.5 million Changamwe marshalling yard were completed in 1978. This modern rail services complex will become fully operational as soon as work on regrading the main line is completed. In the meantime work on the provision of diesel locomotive maintenance facilities has continued at Nakuru and Eldoret. This constitutes the final phase of the programme which was designed to provide relevant facilities for the eventual full dieselization of the system. The other major aspect of civil engineering work included track renewal and line improvement programmes and the provision of sidings to enterprises in industrial areas in the major towns and other industrial sites. Such work was in progress throughout the year.

Harbours and Shipping

14.11. Mombasa port which serves Kenya, Uganda, Burundi, eastern Zaire and Sudan recorded some expansion in its activities. However, the tonnage of freight handled at the port which as shown in Table 14.5 increased by 3.3 per cent overall in 1978 was still below the level achieved in 1974. Volume of dry cargo landed in 1978 rose by 13.9 per cent while that of bulk liquids increased by 6.5 per cent, giving an overall increase of 8.9 per cent in the volume of landed cargo which was handled by the port in 1978. Particular increases were recorded in import landings of motor vehicle spares, petroleum products, sugar, wheat and salt, while the volume of sulphur and fertilizers handled declined. Volume of dry cargo loaded fell slightly by 0.8 per cent, while that of bulk liquids fell by 31.9 per cent, yielding an overall decrease of 8.3 per cent in the volume of loaded cargo in 1978. Substantial rises were however recorded in soda ash and tea, two of Kenya's major export commodities. Loaded volume of the former rose by 51 per cent to 148,300 tonnes and of the latter by 6.6 per cent to 101,300 tonnes in 1978. The number of ships calling at Mombasa also rose from 1,447 in 1977 to 1,613 in 1978.

* Provisional.

14.12. Good progress was made during the year, on the development project aimed at expansion and modernization of facilities at the port. A new deepwater berth. No. 18, came into partial use in August. Work on this new berth had started in 1976 and is due for completion in June, 1979, when a stacking area, electrical and mechanical installations as well as handling equipment will have been provided. The new berth will provide an additional 180 metres of berth space for containers, increasing the total length of wharfage for such special use in berths 16. 17 and 18 to a total length of 540 metres. The port has also acquired a heavy duty 40 tonne forklift truck for handling containers.

14.13. During 1978. the Eastern African National Shipping Line handled a total of 80,784 freight tonnes compared to 67,156 freight tonnes in 1977 and earned K£2.47 million. The line has acquired two more vessels which were delivered in the last quarter of the year.

Pipeline Transportation

14.14. The Mombasa-Nairobi white petroleum products pipeline operated by the Kenya Pipeline Company was commissioned in February, 1978. Initially only motor spirit was pumped up the pipeline. Thereafter, other petroleum products have progressively been introduced. Kerosene was added to this list in April, followed later by jet fuel. Until July, 1978, jet fuel was transported by road bridgers. Although the pipeline attained a peak throughput of all products in January, 1979, total deliveries in the first quarter of 1979 at 335,700 cubic metres were lower than in the last quarter of 1978. This decline is attributed to the upheavals in Uganda which occasioned lower forward traffic from the pipeline terminal in Nairobi. Details on the pipeline throughput are given in Table 14.6.

PIPELINE THROUGHPUT OF WHITE PETROLEUM PRODUCTS, 1978-1979

Air Transport

14.15. Kenya Airways now in its second year of operations extended its services to Jeddah via Khartoum, and is now in effect covering virtually all destinations previously served by the defunct East African Airways Corporation except for the destinations in Uganda and Tanzania. The performance of the flag carrier as indicated in Table 14.7 improved considerably during 1978. The rate of utilization of the passenger capacity available on domestic flights improved from 59 per cent in 1977 to 66 per cent in 1978, while for international traffic the ratio rose from 48 per cent to 52 per cent. The respective freight capacity utilization for domestic and international traffic were 54.7 and 47.3 per cent in 1978 as compared to 49.1 and 39.9 per cent, respectively in 1977. At various times last year the airline leased aircraft from other operators to supplement its fleet. The main

developments so far in 1979 include the opening of the Nairobi-Lagos-Accra route in January, and the introduction of reduced fares schemes, APEX, on the Nairobi-London route.

14.16. Flamingo, a subsidiary of the Kenya Airways, is charged with the operation of cargo and passenger charters, although so far it has largely concentrated on cargo charters. In 1978 it operated 172 cargo flights at an equivalent of 88 per cent load factor performance. It, however, still faces fierce competition from companies established in the developed world.

14.17. Kenya Airfreight Handling Company is another subsidiary of the Kenya Airways. It started operations in June 1978 and now handles all cargo to and from Nairobi Airport, leaving Kenya Airways to handle the passenger services. In 1978 the company handled 41.000 tonnes of freight of which half were horticultural exports.

Airport Development

14.18. *Jomo Kenyatta Airport, Nairobi.*—The major development works at the new national airport were completed in early 1978 and the airport commissioned on 14th March, 1978. These works included a new passenger terminal complex providing direct passenger access to aircraft through four airbridges, a separate cargo terminal, an air traffic control block and other ancillary buildings, a new aircraft taxiway parallel to the runway, aircraft parking aprons, and service roads and engineering facilities. The development has cost in all a total of K£28 million. A dual carriageway road to provide an uninterrupted connexion between the airport and the city centre is now practically completed. Planning is already in hand to extend the existing freight handling facility, and provide further office accommodation for airport users.

14.19. *Mombasa Airport.*—The final works involved in upgrading this airport to international standards with the provision of a new runway, taxiway, aircraft parking apron, a new passenger terminal, an air traffic control block and other buildings were completed during 1978 at a total cost of K£11 million. Wide-bodied jets operating direct to Mombasa from Europe and carrying charter traffic commenced using the new airport in time for the peak tourist season in November 1978.

14.20. Table 14.8 details passenger and freight traffic handled at Nairobi Airport. After the decline in 1977, the number of passengers passing through this airport recovered only slightly in 1978. This small increase in passengers handled was not matched by any rise in the volume of cargo handled. The direct access of international flights to Mombasa by larger aircraft obviously had its impact on freight handled at Nairobi which declined by 9.5 per cent despite a 9.3 per cent increase in arriving cargo. Table 14.9 sets out figures on numbers of passengers and volume of freight handled at Mombasa Airport. The new facilities increased the level of activity at Mombasa airport

in 1978 at the expense of Nairobi Airport. The number of passengers handled at Mombasa Airport rose by 3 per cent, being mainly tourists from Europe flying directly to enjoy the beaches. The haulage of coffee from Kigali, however, went up significantly and helped raise the volume of freight by 325 per cent from 6,188 tonnes in 1977 to 26,269 tonnes in 1978. Indeed the volume of freight handled at Mombasa Airport virtually reached the level of freight hauled by Nairobi Airport but passenger traffic was still only about one-quarter of the traffic that is handled by Jomo Kenyatta Airport.

14.21. Wilson airport is the centre for general aviation in Kenya. Plans are currently being formulated for the provision of a new air traffic control building and other facilities at this airport. A programme for the improvement of the up-country airfields which serve the important administrative, strategic and tourist centres of the country is being implemented. It is estimated that a total of K£6 million will be spent during the current plan period on improvement of aviation facilities.

Posts and Telecommunications

14.22. The overall performance of Kenya Posts and Telecommunications Corporation continued to improve in 1978 despite some decline in certain activities. The number of post offices opened in 1978 increased by 5.7 per cent compared to an increase of 9.1 per cent the year before, while the number of private boxes rose by 10.6 per cent against an increase of 22.9 per cent in 1977. The number of manual telephone calls made rose by 8 per cent to 11.4 million and the number of ordinary letters handled went up by 20 per cent to 168 million. There was a varying rate of increase in other activities ranging from 7.9 per cent in the value of public telephone call boxes to 19.9 per cent in the volume of telex subscribers. Declines were, however, recorded in the number of parcels and registered articles that were handled during 1978. The details are set out in Table 14.10.

*Provisional.

14.23. As shown in Table 14.11 the services of Kenya External Telecommunication Company increased substantially in 1978 despite the fall in telegraph services. The number of paid external telephone call minutes increased by 9.8 per cent from 2.67 million in 1977 to 2.94 million in 1978, while there was a rise of 19.6 per cent in utilization of telex service from

EXTERNAL TELECOMMUNICATIONS TRAFFIC, 1974-1978

*Provisional.

1.63 million minutes in 1977 to 1.94 million in 1978. The cable traffic handled by the company, however, has declined from 401.1 thousand cables in 1975 to 226.0 thousand cables in 1978. The decline in the use of telegraph service may be attributed to the increase in the use of telephone and telex services.

Information and Mass Media

14.24. The Department of Information made considerable progress in 1978 in the setting up of information centres in the country. Two new sub-offices were opened at Thika and Mwingi while construction work was started on offices for Machakos and Kitale. New SSB/VHF facilities have been installed at Busia, and Kapenguria while others are to be installed in Kitui and Wundanyi in 1979. The monthly newsletter "HABARI" is now being printed for distribution by the Ministry's mobile printing unit at Meru.

14.25. Details on the number of radio and TV sets bought are set out in Table 14.12. The number of new radio sets bought was 10 per cent below that for 1977, but was still at the very high level of 131,355. Purchases of TV sets increased by 49 per cent, from 4,901 in 1977 to 7,309 in 1978. The operations of the Voice of Kenya were boosted by the installation of a 100 KW shortwave transmitter and two 10 KW VHF/FM transmitters. Further the Nairobi, Timboroa and Ma/eras TV transmitters were modified so that they were able to transmit in colour from November, 1978.

Television Sets	2,647	2,847	3,458	4,901	7,309

14.26. Two major development projects aimed at providing additional training facilities were started at the Kenya Institute of Mass Communications in 1978. The first project will raise training capacity by 90 trainees. The second project is concerned with setting up of a film production complex, which when completed will enable colour film processing to be done locally.

14.27. Table 14.13 details average daily/weekly newspaper circulation. Morning newspapers recorded considerable increases in their sales with the circulation of both English and Swahili dailies increasing by 18 per cent. Weekly newspapers too increased their circulation although such increases were more marked for the English language papers.

CHAPTER 15—THE SOCIAL SCENE

The Government, which attaches great importance to the development of human resources and the well-being of the people, has always allocated a substantial part of its expenditure to social services. As shown in Table 15.1, Central Government is estimated to have spent K£133 million on recurrent

CENTRAL GOVERNMENT EXPENDITURE ON SOCIAL SERVICES, 1975/76-1978/79

Table 15.1

expenditure on social services in 1978/79. This represents an increase of nearly 10 per cent over the expenditure in 1977/78 and accounts for approximately 28 per cent of the Government's current expenditure in 1978/79. In addition the local authorities also incurred an expenditure of K£18 million, on social services in 1978/79. Table 15.2 refers.

*Provisional.

15.2. This chapter seeks to describe developments in the main social services except housing and employment. The former is dealt with in Chapter 12 and the latter in Chapter 5.

Education

15.3. Education continued to account for preponderant share of the total expenditure on social services in 1978/79. Recurrent expenditure on education rose to K£94.6 million in 1978/79 while an additional expenditure of K£5.6 million was incurred on education on development account. Both figures are approximately 10 per cent higher than the level in 1977/78. As detailed in Table 15.3 primary education has the largest allocation, accounting for 62 per cent of the total recurrent expenditure on education.

*Estimates.

**Includes expenditure on University of Nairobi, Kenyatta University College and other institutions of the education not specified above.

15'4. The Government's commitment to expand educational opportunities is reflected in the recent decision to eliminate the tuition fees for Standard 6 making education free from Standard 1 to Standard 6. It was further directed that no more collection of building and other school funds in primary schools is to be effected from the pupils as from the beginning of the 1979 school year. Parents' associations, which will be formed in each aided primary school throughout the country, will be responsible for organizing meetings in the community for the purpose of collecting funds for the construction of school

buildings and furnishing them as well as raising other funds required by the school for extra. curricular activities. Finally starting in the month of May 1979 the Government is also distributing free milk to all schools to improve children's nutrition and thus their capacity to learn.

15.5. The Development Plan, 1979.1983, lays emphasis on securing improvement in the quality and relevance of education while ensuring a wider distribution of educational opportunities, particularly to remote areas. The Government hopes to extend provision of free education to cover Standard 7 in the primary school and to enhance the quality of this seven year primary education through provision of qualified teachers, suitable instructional materials and changes in the curriculum. This objective is to be attained through construction of boarding schools in arid districts to cater for an additional 3,600 primary school boarders; review of the primary school curriculum to improve the teaching of mathematics, science, and pre-vocational subjects; gradually phasing out untrained primary school teachers; and strengthening of the primary school supervisory services.

15.6. The aims and programmes of secondary education are to be oriented during the plan period primarily to suit the patterns of employment opportunities. In view of the difficulties experienced in absorbing all secondary school leavers into formal sector employment, the curriculum in secondary schools is to be revised to emphasize the teaching of relevant practical skills among other subjects. It is hoped this will enable larger numbers of secondary school leavers to be absorbed into employment, self-employment, and employment in the informal urban and rural sectors of the economy. The Government hopes to attain this objective by—

- (i) allowing modest expansion in secondary education to correct imbalances that exist among districts and between boys and girls;
- (ii) continuing with the Harambee Package Programme started during the last plan period offering limited assistance to Harambee schools to upgrade the quality of their teaching;
- (iii) integrating education with rural development through diversification of the curriculum, particularly by emphasis upon the teaching of the agricultural sciences;
- (iv) promoting personal qualities of creativity and innovativeness as well as promoting awareness of ethics and social obligations which will uphold the values of traditional African society while preparing students to face the challenges of modern society; and
- (v) establishing a programme of out-of-school education through extra-mural and correspondence studies and by radio and television for those not selected for secondary or post-secondary education. The Government will also review the fee structure of secondary schools to ensure that parents contribute more towards the costs of secondary education.

*Provisional.

15.7. The University of Nairobi including Kenyatta University College is also expected to train manpower which will have motivation, skills, and knowledge necessary to enhance Kenya's technological progress. It will also engage in research relevant to the country's needs, and impart knowledge of the development problems of rural Kenya through a University Student's Service Scheme. The Government will also establish a second university in the country in order to expand the supply of high-level manpower. The new university will complement the work of the University of Nairobi by catering for learning in such areas as marine science and engineering, chemical engineering, mining engineering, water engineering, and studies of the arid and coastal zones.

15.8. There was only a modest increase in enrolment in primary schools in 1978. As shown in Table 15.4 these enrolments approximated 83 per cent of the estimated population aged 6 to 12 on the basis of population projections made by the Central Bureau of Statistics in 1972. However, more recent population estimates, based on the results of the National Demographic Survey of 1977, which are discussed in Chapter 3, suggest that the size of the potential school age population is larger than originally estimated. The present national enrolment ratio of the 6 to 12 year old could therefore be lower than 83 per cent. The Central and Eastern provinces continue to have the highest enrolment rates even exceeding the estimated numbers in the relevant age group in the two provinces.

15.9. Table 15.5 details enrolment in primary school by standard. The distribution of students reflects the large initial influx of students into Standard 1 in 1974 when fees were first eliminated for the initial four years of primary schooling. Entrants in 1974, who had remained in school and not repeated a class, would have reached Standard 5 in 1978. A comparison of the enrolment figures for Standard 5 in 1978 with the figures on enrolment in Standard 1 in 1974 indicates that 55 per cent of the pupils who began primary school in 1974 did not reach Standard 5. This suggests that the

ENROLMENT IN PRIMARY SCHOOLS BY STANDARD, 1974-1978

Table 15.5

Numbers

	1974	1975	1976	1977	1978*

**Provisional.

sudden expansion of enrolments produced either a very high rate of wastage and/or a high rate of unreported repetition. Wastage rates among entrants to the educational system from 1975 onwards, although lower than the wastage rate for entrants in 1974, continue to be above the rates calculated for the period prior to 1974.

15.10. Details on total enrolment in secondary schools are noted in Tables 15.6 and 15.7. Enrolments in secondary schools have increased from 195,674 in 1974 to 319,982 in 1977 and 362,025 in 1978. This yields an increase of 85 per cent in enrolments between 1974 and 1978, while there was an increase of 13 per cent between 1977 and 1978. The shift in enrolments in favour of the unaided schools is another feature in the expansion of secondary schooling

**Provisional.

and is apparent from the fact that the proportion of students in unaided schools has increased from 48 per cent in 1974 to 66 per cent in 1978. Girls constituted 40 per cent of total enrolment in secondary schools. Some 44 per cent of students in Standard 7 in 1977 found places in Form 1 in 1978, 12 per cent in aided schools and 32 per cent in unaided institutions.

15.11. The extent of the movement into unaided schools is particularly evident when enrolments by form are considered. The proportion of Form 1 entrants in the unaided sector rose from 60 per cent in 1974 to 71 per cent in 1977 and 73 per cent in 1978. Thus whilst the increase in the number of pupils enrolled in Form 1 in aided schools between 1974 and 1978 was 9 per cent, the increase in registrations in Form 1 in unaided schools amounted to 97 per cent. Rapid growth of the unaided secondary school sector between 1974 and 1978 increased educational opportunities but delayed reconsideration and reform of the structure and curriculum of secondary education. Despite large-scale community financial investment in Harambee schools, they continue to have poorer facilities and a far higher proportion of untrained teachers and offer more limited courses than aided schools.

*Anapproved teacher, has completed the equivalent of a University education.

15.12. As outlined in Table 15.8, the teaching force was composed of 103,936 teachers in 1978, of whom 87 per cent were teaching in primary schools and 13 per cent in secondary schools. Of the primary school teachers, 69 per cent were trained and 99.1 per cent were Kenya citizens. The reliance on untrained teachers in primary schools decreases slightly in 1978 with the percentage of untrained teachers declining from 34 per cent to 31 per cent of the primary school teaching force. The majority of trained primary school teachers have completed some secondary schooling with an additional two years of further training at a training college. Most of the untrained primary school teachers also have finished at least two years of secondary schooling. Nearly all secondary school teachers in aided schools have had four to six years of secondary schooling and an additional two or three years of teacher training in education. These qualifications are considerably better than those of teachers in unaided secondary schools, most of whom are untrained secondary school leavers. In 1978 almost 80 per cent of all secondary school teachers were citizens as compared with 58 per cent in 1973.

15.13. Enrolments in training colleges for primary school teachers increased from 8,407 in 1977 to 9,011 in 1978 consonant with the Government policy of increasing the number of trained teachers in order to phase out gradually the employment of untrained teachers in primary schools. Of the total enrolment, 5,580 were males and 3,431 females. Individual performance in the final examination is the determining factor in the certification of candidates into P1, P2 and P3 categories of teachers. Table 15.9 details enrolment in primary training colleges in 1978 by qualification of entrants. Most students have the East African Certificate of Education.

15.14. In addition to the enrolment at Kenyatta University College and in the Faculty of Education of the University of Nairobi, students were also being trained to teach in secondary schools in other institutions in 1978. These included 496 students at the Kenya Science Teachers' College, 49 students at the Kenya Polytechnic, and 142 students at Kenya Technical Teachers College as well as the students at Egerton College who were being prepared to teach agriculture and home economics.

15.15. Expansion and diversification of the scope of teaching in technical and vocational subjects continued in 1977. Technical subjects are taught in four technical secondary schools for males and also at the Kenya and Mombasa polytechnics, which in 1978 had an enrolment of 2,787. Courses offered at the polytechnics include mechanical, electrical and civil engineering, printing, and business studies. A total of 931 students were enrolled in the ten operating Harambee institutions of technology. The Kaimosi institute had 168 students, Kiambu 252, Murang'a 168, Meru 85, RIAT 36, Gusii 24, Sangalo 50, Kirinyaga 120, Kimathi 132, and Rift Valley 36. The Harambee institutes of technology provide courses in such fields as building trades, mechanical engineering, agriculture, garment manufacture, home science, and secretarial studies. The basic Government grant to these institutes was raised from K£80 per student to K£130 per student per annum in 1978. The Ministry of Education continues to guide the institutes in their planning and development. Four more institutes of technology are expected to open in the near future.

15.16. In addition to the training offered in technical institutions various bodies also undertake specialized training for their own needs. Recruitment into technical training programmes in the public sector continues to be effected through a national selection process whereby all students in Form IV are offered the opportunity to apply for entrance into Form V or for selection into career training courses in seven fields; primary and secondary school teaching; agriculture and water development; health; technical work; craft work; tourism and hotels; and skilled office work. The various career training programmes attracted a very large number of applications for entrance in 1978/79. A total of 14,403 applications were received in 1978/79 indicating first preference for the 699 places in agriculture and water development, 11,384 for the 412 places in health, 3,529 for an intake of 209 trainees in technical work, and 6,443 for the 164 places at Kenya Utalii College and Kenya Polytechnic for courses in tourism, travel, and catering and hotel services.

15.17. There was an increase in total enrolments at the University of Nairobi from 5,283 in 1977/78 to 5,942 in 1978/79. Distribution of students into undergraduate, diplomate, and postgraduate categories is shown in Table 15.10. While there was a slight decrease in the numbers taking diploma courses, there was a marked increase in enrolments for several undergraduate courses including arts, commerce, agriculture, science, and medicine. Total enrolment in postgraduate courses also rose, particularly in faculties of science and medicine. Women accounted for 23 per cent of the total enrolment in 1978/79 and students from other countries constituted less than 6 per cent of the total.

15.18. The trend of declining enrolment at Kenyatta University College was reversed in 1978/79. Total enrolments, as shown in Table 15.11, increased from 1,210 in 1977/78 to 1,553 in 1978/79, as a result of the transfer of

the Faculty of Education from the main campus of the University of Nairobi to Kenyatta University College.

15.19. The Educational Media Service continued broadcasting programmes to primary schools, secondary schools and to teachers in primary schools. Broadcasts to primary schools normally lasted 20 minutes each 35 times per week, and cover subjects such as English, music, history, Kiswahili, science, geography, and health education. Broadcasts to secondary schools also are of 20 minutes duration 20 times a week and cover science and industry, Kiswahili, history, geography, religious education, and agriculture. Some time also is allocated to broadcasts aimed at improving the primary school teachers knowledge of modern mathematics and Kiswahili.

15.20. Table 15.12 details the sharply rising costs of schooling per student to the Government with ascending levels of education. Estimated recurrent costs per student in 1978/79 ranged from K£18 in a primary school to K£1,780 at the University of Nairobi. The cost to the Government of one year of secondary schooling in an aided institution amounts to nearly five

ESTIMATED RECURRENT COST PER STUDENT BY TYPE OF
INSTITUTION, 1978/79

<i>Table 15.12</i>	<i>K£</i>

Kenyatta University College	1,730
University of Nairobi	1,780

times the expense of educating a primary school pupil, whilst the average cost of one student at the University of Nairobi is nearly 100 times the cost of a student in a primary school. The estimated recurrent cost per student rose in all types of institutions between 1976/77 and 1978/79 with the University of Nairobi registering the smaller proportional increase per student while Kenyatta University College recorded the largest increase. An examination of these figures underscores the problem the Government will confront in financing continued expansion of the educational system. Even relatively modest rises in per student costs, such as the 12.5 per cent increase in per pupil expenditures in primary schools, when combined with large-scale growth in enrolments, require considerable increases in the education budget.

Health

15.21. Improvement of health services continues to be one of the major preoccupations of the Government. Health services are being improved through additions to physical facilities and personnel to dispense health services and through education in personal hygiene. Table 15.13 shows the number of health units and beds and cots in 1978. Rapid population growth indicates that the growth in the provision of services will have to continue at a fast rate if the average for the number of units per 100,000 population is to be increased to the level which is adequate to serve the population effectively.

HEALTH INSTITUTIONS AND HOSPITALS BEDS AND COTS BY PROVINCE, 1978

TOTAL	225	201	1,103	1,529	24,708	166

15.22. The work on extension of facilities at a number of district, provincial and the Kenyatta National Hospital continued through 1978. Also four new rural health training centres at Misoriot, Karurumo, Tiwi and Mbale were completed and are now functional. In addition about 75 other centres and dispensaries were identified for further development. Construction work is to start on new hospitals at Mkowe, Nairobi, Mombasa, Migori, Iten and Webuye during the current plan period while some of the self-help health projects will also be brought into the public health network.

15.23. Table 15.14 details the number of registered medical personnel including those in training institutions. Figures for trainee doctors, pharmacists and dentists refer to all years of training. Registered nurse trainees include also those at the School of Advanced Nursing. Apart from the number of nurses shown in the table a further 793 and 943 were being trained as Community Nurses in 1977/78 and 1978/79, respectively. While

Enrolled Nurses..	7,199	7,426	7,908	51.26	648	504

*Data refer to registered clinical officers in Government Services.

the numbers of all other registered medical personnel show increases in 1978, the number of registered doctors dropped slightly from 1,479 to 1,466. This is due to the recent revisions in the registration of doctors. In addition to the 1,459 clinical officers in the public service, it is estimated that there are about 200 clinical officers in the private sector.

15.24. The Government is particularly vigilant in the control of communicable and vector-borne diseases. An outbreak of plague in 1978 was quickly detected and brought under control. Surveillance has continued to indicate a drop in deaths resulting from communicable and vector-borne diseases.

15.25. The Government was preoccupied during the previous plan period with building up an efficient infrastructure for the delivery of family planning services. In the current plan period emphasis will be shifted to implementation of the programme aimed at reducing the rate of population growth from the current estimated level of 3.9 per cent per annum. An additional 1,175 field staff are to be recruited and a further 315 service delivery points established to attend 900,000 acceptors during the plan period.

15.26. Some of the data from the Kenya Fertility Survey conducted in 1977/78 are set out in Table 15.15. These data show that 85 per cent of the 8,085 eligible female respondents aged 15-49 years covered in the survey have some knowledge of birth control methods. However only 12 per cent had used an efficient method in the period and only 5.2 per cent were currently using a family planning method when the survey was being conducted. If pregnant women and those not currently married and not fecund are excluded, the proportion of exposed women who are current users of family planning methods is reduced to 10 per cent. These are very low percentages and the objectives of the current programme must be further intensified if a larger number of families are to be made aware of the benefits of family planning.

KNOWLEDGE AND USE OF FAMILY PLANNING
METHODS REPORTED BY KENYA FERTILITY SURVEY, 1977/78

Table 15.15

*Includes both compulsory and voluntary contributions and other receipts.

**Benefits exclude other payments ,e.g. management expenses.

Other Social Services

15.28. *Youth Development*.—The number of village polytechnics rose from 194 in 1977 to 220 in 1978 with about 22,000 trainees and 1,200 instructors. This represents an increase in enrolment of about 10,000. The number of village polytechnics will be increased to 370 with an enrolment of 40,000 by the end of the current plan period.

15.29. *Social Welfare*.—There were about 5,000 day care centres operating in 1978 compared to 4,712 in 1977. Enrolment in day care centres rose from 169,000 in 1977 to about 300,000 in 1978. This programme will be strengthened during the current plan period through extended courses for teachers, construction of additional training centres and training of additional trainers and supervisors.

15.30. *National Social Security Fund.*—The number of employees registered with the fund rose from 62,960 in 1977 to 66,616 in 1978. The number of employers registered in 1978 was 1,017 compared to 1,227 in 1977. Contributions to the fund increased from K£16.55 million in 1977 to K£19.55 million in 1978, while the total value of investments of the fund rose by K£28.11 million to reach K£139.05 million in 1978. These details are set out in Table 15.17.

NATIONAL SOCIAL SECURITY FUND CONTRIBUTIONS AND BENEFITS, 1967-1978

TOTAL	116.41	10.00	106.42	139.05

*Annual investments are made up of net contributions plus investment income and bank interest.

15.31. *Community Development.*—Community development programmes are geared to mobilize people to cooperate in national-building activities. These activities consist of Harambee self-help projects, family life training centres, craft development and women's programmes. A total of 14,410 projects were undertaken in 1977 compared to 8,495 in 1976, while the value of self-help projects rose from K£6.5 million in 1976 to K£8.7 million in 1977. A total of 1,671 projects were completed during 1977 and 753 projects abandoned. The distribution of self-help projects by type shows that educational projects dominated the self-help movement with a value of K£5.5 million—over 65 per cent of the total contribution. These details are shown in Table 15.18. A total of 7 Family Life Training Centres with an enrolment of 1,291 mothers and 2,479 children were in use in 1977. The programme aims at educating mothers on nutrition and other subjects related to child health in an attempt to eradicate malnutrition.

*Number of projects continued from the previous year plus the number started less numbers abandoned and completed.

15.32. *Vocational Rehabilitation*.—The vocational rehabilitation programme aims to restore persons suffering from physical or mental impairments to useful employment and economic independence. Eight vocational rehabilitation centres at Bura, Embu, Nyandarua, Kericho, Kisii, Kakamega, Itandu and the Nairobi Industrial Rehabilitation Centre were operational in 1977.

15.33. *National Youth Service*.—The service had 2,011 men and 136 women enrolled in 1978. A total of 815 youths who had graduated from the service were placed in direct employment in 1978. During the year the service established the Hindi Development Project Unit in Lamu District, Lambwe Valley Farm Demonstration Sub-unit in South Nyanza District, and stone crushing project at the Naivasha Women's Training Unit in Nakuru District. A total of K.Sh. 273,850 was realized by sales of farm products from all the units run by the service.

15.34. *Adult Education.*—A total of 2,186 education centres were in existence in 1977 with an enrolment of 41,811. Of the total number of centres, 957 being run by the Government had an enrolment of 20,191. A total of 749 candidates from the centres registered for the CPE examination but only 446 passed. Eradication of illiteracy among the adults in Kenya is to be given priority in the plan objectives and it is anticipated that by the end of the plan period, a majority should have learnt how to read and write.
